the commander had explained to her the purpose of the visit. "Whatever possessed the man, I don't know. But you can go in and find out if you can; I'm sure I can't."

So they went into Abram Ginter's bedroom. He did not seem greatly surprised to see them, nor was he greatly pleased. He guessed the purpose of their visit and feared trouble.

"I got your letter," said Torrey, when they had inquired after Abe's health. "I read it to the post last night, and the boys don't know what it means. They appointed us a committee to come up here this morning and find out."

"Hasn't my resignation been accepted yet?" inquired the old man anxiously.

"Not yet, Abe," replied the commander.

"The boys didn't understand; they wanted to know first what it was all about."

"That's my secret, William Torrey," replied the sick man firmly. "I can't tell you that. You ought to have accepted it the minute you got it—for the good of the post."

"Now, Abe," broke in the chaplain, "don't you think you owe us some explanation?"

"It wouldn't do any real good," was the reply. "No explanation would help any. Besides, what's the use of my spreading my disgrace broadcast? Can't you do the right thing by me and let me go?"

"But we don't want to let you go, Abe," said the adjutant. "We don't believe there's any good reason for your going. And we can't believe it till you tell us what it is."

Then Abe turned his face to the wall in silent protest. The visitors looked at one another awkwardly until Sarah Ginter came to the rescue. She had entered the room with the visitors and had remained standing at the foot of the bed.

"Abe Ginter," she exclaimed, when she felt that the silence had lasted long enough, "don't be a fool! Maybe you have been a knave, but if you have prove it! Prove it!"

"It wasn't quite that, Sary," he replied weakly. "Just a coward, that's all."

"Why, you weren't a deserter, were you?"

"No."

"Nor a spy?"

"No."

"Nor a —"

"Bounty jumper?" suggested the chaplain.

"No, oh, no!"

"Ever break and run under fire?" asked the adjutant.

"Me? Never!" replied the old man with spirit.

"Well, when you first enlisted —" persisted the adjutant.

"I didn't enlist," interrupted the sick man, facing his visitors.

"Didn't enlist!"

It was evident that the old man had spoken inadvertently; but Sarah Ginter quickly followed up the clue.

"Then how under the canopy did you get into the army?"

The gaunt face of the helpless veteran reddened with shame as he looked hopelessly from one to another of his inquisitors. He knew that the game was up.

"I was drafted," he said simply.

And now that the secret was out, he hurried on in explanation:

"Yes, gentlemen, drafted; forced against my will to help defend the flag of my country; for two years a laggard and a drone in the comfortable North, while you volunteers were spilling your blood and wasting your lives at the front. And then, drafted! Flung into the army! Oh, it's disgraceful! I'm not fit to associate with decent soldiers. That's why I want to get out—that's why!"

He lay back on the pillow exhausted, and the gray ghosts of weakness again chased the color from his face.

Commander William Torrey looked at Chaplain David Graham, and Chaplain David Graham looked at Adjutant James Madison, and the faces of all three men flushed consciously; but in William Torrey's eyes there was a merry twinkle.

"Well, boys," he said to his two companions, "I guess he has sized you up about right, eh? Better smile and take your medicine."

Then he turned to Abe Ginter and laid his hand affectionately on the sick man's arm.

"I have to tell you, Abe," he said, "that both my adjutant and my chaplain loved their country so much that they went to war—to escape the provost marshal's posse in the draft of '63."

Then all three visitors began to laugh, softly at first, and then more merrily, and Mrs. Ginter, after wiping her eyes with the corner of her apron, joined in, and—well, for a few minutes it did not seem like a sickroom at all.

Abe Ginter lay bewildered, and looked

helplessly from one to another of his visitors. Suddenly William Torrey grew sober.

"Abe Ginter," he asked, "did the fact that you were a drafted man make you fight any less vigorously, make you any less anxious that the old flag should come victorious out of every battle? I know very well that it did not."

The old man's hand stole along the coverlet

ought to be wearing a congressional medal to-day for exceptional bravery under fire. That's right!"

The chaplain and the adjutant nodded their approval vigorously; but Abe Ginter had nourished his delusion for years until it had become a deeply rooted conviction: he could not easily give it up. He was still doubtful what attitude

not almost time for the Memorial Day procession to start. The route was a quarter of a mile away, but at least he could hear the band.

"Not for an hour yet," replied his wife. "I'll open the window more, and swing the bed round so that you can look out and hear it better when it comes."

At ten o'clock, with the assistance of her granddaughter, she moved the head of the invalid's bed to the window, so that he could look out across the front yard to the orchard on the wooded rise of ground that hid the river road from his view; but he knew how the procession would look. There would be the village band in the lead, the marshal of the day on horseback with a red sash across his breast, a carriage containing the officers and speakers, another in which would ride the crippled and feeble veterans, a dozen old soldiers in uniform on foot, a score of young girls dressed in white, carrying wreaths and bouquets of flowers to lay on the graves of the soldier dead, and at last, on foot and in carriages, the citizens of the town.

Many a time he had marched in such a procession, but he would never march in one again. Even while he dwelt on this thought, from somewhere far away came the soft music of a band. The old man put his hand to his ear to catch the strains more clearly, and his wife raised the window sash higher and braced it with a longer stick.

The music grew more distinct. Doubtless the procession had reached the nearest point to Abe Ginter's cottage; and the melody would soon fade away. Mrs. Ginter had taken a chair by the head of the bed and was also listening.

"Seems to me," she said, "it's remarkably plain. The air must be clear to-day."

Then something that she saw down the road attracted her attention and she went to the window.

"Abe Ginter!" she cried. "I do believe"—then she brushed her hands across her eyes to make sure they were not deceiving her—"I do believe they're coming up this way!"

"No," he replied, lifting himself on his elbows. "No, they—they wouldn't —"

"Yes, they are. Sure as you're born! Look! Through the trees there, by Simpson's barn. Can't you see them?"

Sure enough, there they were, coming round by the back road, a half mile out of their way, just to pass Abe Ginter's house. There were the band and the marshal; and there were the carriages and the little group of veterans and the flower

girls and the citizens; he saw them with his eyes—at least until his eyes grew so wet that he could not see at all.

"They're doing it for you, Abe!" cried Mrs. Ginter. "They're doing it for you! Here, Hannah, quick! Help me get your grandpa up so that they can see him. Put those pillows at his back. There, how's that? They're doing it for you, Abe! Isn't it grand?"

"Halt!"

It was Commander William Torrey who gave the command. The old boys were there in the road, less than a hundred feet from Comrade Ginter's window.

"Left face! Salute!"

Every hand went up to its corresponding hat in obedience to the command.

"Comrade Ginter," said William Torrey, "the members of this post appreciate your bravery in war, your devotion to the Grand Army, and your faithfulness as a comrade. They know why you wished to resign, and they will not release you from membership. Living or dead, you shall never be dropped from the roll; and may God keep you with us in body for many a day."

He turned to his command:

"Right face! Forward march!"

The band and the marshal, the carriages, the veterans, the white-robed girls and the citizens passed up the road, leaving in his

MEMORIAL DAY IN WAR TIME

THERE is no other day in all the world like our own Memorial Day. No other people has set apart a day of remembrance on which the whole nation goes forth to beautify with the blossoms of spring the graves of the men who gave or risked their lives in battle for their country. That may be because no other modern nation has until now faced, as the United States faced half a century ago, an armed threat against its very existence; it may be because there is among Americans a vein of sentiment that expresses itself with unusual frankness and spontaneity. For there is no misjudgment more grotesque than that which accuses America of materialism. There are materialists among us, as there are in every country; but beneath and beyond all we are incurable idealists. We have never followed any leader who did not feel and nobly express the spiritual aspirations of a free democracy. We have never fought willingly except in defense of those aspirations. We fight to-day only because we know that there is a power in the world that threatens the things that we hold most sacred.

This Memorial Day finds us committed to a war beside which even our own great Civil War seems small; a war that presented to us an issue less simple than the issue we faced in 1861 and a choice less immediately inevitable. But through the smoke of battle we have seen clearly the principles that are in conflict; our young men who take up arms to-day, and who will offer their lives if need be in the struggle, may go forth serenely confident of the justice of their cause; they may be sure that in the days to come their country will remember their generous sacrifice as gratefully as it has remembered the sacrifice of those who gave their lives that the Union might live. In the days to come they will form another Grand Army of the Republic—a united republic now. Their service, and it may be their suffering, will have given a new and a fuller meaning to Memorial Day. They will take up the loving duty that the veterans of our Civil War have so long performed. They, too, like the survivors of 1861 and the volunteers of 1898, will make visible before our eyes the love of country and the spirit of self-sacrifice that this day was meant to immortalize.

For Memorial Day has always been an occasion not only for memories but for consecration. To the gray-haired men, every year fewer in number, who actually bore the heat and burden of our war of reunion it is perhaps chiefly a day of memories. But for the rest of us it cannot be that; if it is to have vital meaning for us, it must have root in our own experience and in our own present needs. The sight of the bent and aged men who in their youth and strength made it possible for this republic to come forth from its travail free and undivided and great, the simple and beautiful commemoration service, the half-masted flags, and the graves heaped with flowers—these things touch with momentary feeling even the most thoughtless. But if that is all, the day has failed of its noblest mission. If it does not rouse in us all—men, women and little children—a fresh understanding of all that our country means to us, if it does not kindle anew our devotion not only to our native land itself but to all the principles of human liberty on which our government is founded, if it does not make us glow with a living desire to be of service each in his own way to the cause of freedom and justice among mankind, then we have lost the message that the patriots who instituted the day meant it to carry.

If we have, some of us, taken this day too lightly, if we have thought of it rather as a welcome holiday than as a solemn day of consecration to the nobler ideals of national life, let us not make that mistake this year of all years. The world is being remade about us; it is not too much to hope that, in Lincoln's mighty phrase, all mankind is under God to have a new birth of freedom. In this great crisis of the race America is to have a part. On this most hallowed of days let us pledge ourselves and all we have to making that part not only honorable but glorious. Let each of us see to it that through him the republic is not hindered in the path of service.

until it reached and grasped the hand of the post commander. The others looked on with deep emotion.

"William Torrey," he replied, "when the government forced me into the fight it made a patriot of me. When I went down there and saw what those boys were doing and suffering for their country, it made me feel just as if I had wanted to lick the whole Confederate army single-handed. Oh, I tell you there wasn't a drop of my blood that was too good to be shed for Abe Lincoln and the flag!"

"Good! Good! I knew it!" exclaimed the commander. "That was just the way with Graham and Madison; wasn't it, boys?"

But without waiting for them to answer he hurried on: "And as for your getting out of the post, it's the rankest nonsense! The boys won't listen to it for a minute."

"But, maybe, if they knew," began the old man feebly, and William Torrey interrupted him:

"Knew? Knew what? That you were drafted? Ay! But they shall know. They shall know that you never lifted a finger for your country until you were forced into the service. And they shall know, too,—indeed they already know,—that no braver soldier ever wore the blue. Why, man! If what Sam Havens wrote me from Indiana is true,—and Sam Havens never told a lie in his life,—you

his comrades of the post would take. "I'm afraid," he said, "that they wouldn't want me to stay."

The commander rose to his feet. "Look here, Abe Ginter, I know those boys, every mother's son of them. I know they won't accept that resignation; and what's more, if you don't withdraw it, and do it to-day, they'll—they'll court-martial you for insubordination. I'm going back now and say that you authorize me to withdraw it, and Graham and Madison shall be the witnesses. You do authorize me, don't you, Abe?"

But the old man could not answer. His voice was beyond control, and tears were chasing one another down the furrows in his face. He took a fresh grip on the post commander's hand, and reached out his other hand to Graham and Madison in turn.

"Silence gives consent," said William Torrey. "Come, boys, we must go. We report at half past nine."

So they were off, and Abe Ginter was left alone with his wife. "Now that you've got that off your stubborn old mind," she said, "I hope you'll decide to get well."

But the old soldier soon began to worry again.

"William Torrey means well," he said, "and so do Graham and Madison, but they're not the whole post."

At half past nine he asked whether it was

wayside home the proudest man who saw the sunshine that beautiful day.

New hope came to him and new strength, and the long summer, the happiest that he had

known in years, passed gently over his head; but when the young girls went again in May to lay flowers on the mounds of sleeping heroes, they placed a wreath on Abram Ginter's grave.

THE PLATTSBURGERS

By Arthur Stanwood Pier

In Ten Chapters Chapter Six 2

ON the same morning on which Lieut. Wharton addressed to the company the remarks that bewildered most of them, but that were sufficiently understood by some of the members of Squad 16, Capt. Hughes made an announcement of universal interest.

"To-morrow," said the captain, "you will have the first target practice. In order that all the companies of the regiment may get in their practice in the limited time permitted, it will be necessary for us to begin our work early in the morning. To-morrow, reveille for B Company will be at a quarter to five, breakfast at a quarter past, and at a quarter to six you will begin your target practice. You will be as quiet as possible dressing and leaving the camp, so as not to disturb those in the neighboring company streets. You will see that your rifles are all thoroughly cleaned and in order this evening. This afternoon, instead of the usual optional work, you will all report on the camp drill ground for some preliminary subcaliber target practice. Dismissed."

In tent 26, while the fellows were stowing away their packs, Greiner delivered an exhortation:

"Nothing's going to count more toward winning the prize than the record that a squad

was challenging: "What's the use of thinking even that our squad has a show for the prize? The squad that wins will be one that has a corporal it can get behind—a corporal that isn't always thinking about himself."

"It will be one that isn't full of soreheads," retorted Carton.

"I may be a sorehead, but it's not because I want anything for myself," returned Gray.

"You know that as well as I do."

"I don't know what you want, except that you're a trouble maker."

"If you're looking for trouble, you'll find it."

"Oh, dry up, you two, or else go outside somewhere and get it out of your systems!" said Stevens.

There was something authoritative about Stevens when he did speak, which was not often. His command, which was both peremptory and good-humored, quieted the belligerently disposed pair.

"Fellows always get on each other's nerves when they're put into such close quarters," continued Stevens philosophically. "It was the same way in the militia camp I went to. After a while you begin to make allowances for people. You'll all be feeling better in another week."

"By George, I don't know!" said Gray, shaking his head. "When a man once gets my goat the way Corp. Greiner does, it takes me longer than a week to turn into a pacifist."

"I wish Greiner would hurry up and come back with that ramrod," said Bradford. "He's always using it when I want it, and when he isn't using it it seems to disappear."

"Well, you've got a pretty good cleaning apparatus stowed away in the butt of your rifle," replied Stevens. He opened up the compartment in which the oil can and brush, line and sinker were stored, showed Bradford how to detach the brush from the line and substitute in place of it a square of Canton flannel, and showed what satisfactory results could be obtained by the use of it. Carton was as interested as Ted and Gray and Bradford, and by the time the B Company whistle sounded for luncheon harmony was prevailing among the occupants of tent 26.

The first sergeant had an announcement to make after the company had fallen in:

"After luncheon all Brampton College men will assemble below D Street on the drill ground to have their photographs taken. Every Brampton man is requested to turn out for the photograph. No rifles and no blouses, but wear your hats."

"Can we wear the pack?" asked some one of a jocular mind. And amid the laughter that followed the first sergeant said, "Yes, if you don't feel comfortable without it, you can wear the pack."

In the gathering of Brampton men after luncheon Ted was not long in finding Mark Perrin. He and Mark greeted each other in characteristic fashion.

"Hello, Mark! You don't seem to have worked off any of your fat."

"No, and you're still no bigger than a minute."

They sat down cross-legged beside each other in the front row with the other Brampton freshmen, and exchanged experiences while the crowd was assembling and the photographer was making his preparations. Mark told Ted of the "nut" in his company who had been induced to go to the captain and ask for a yard of skirmish line and to the lieutenant with a request for the key to the sentry box; and Ted responded with an account of the proceedings at tent 26 during the rain.

"Humph!" Mark said. "I'm glad I haven't got your corporal. The trouble with ours is, he's too nice to the rest of us. Does most of the chores himself, instead of ordering us to do them. I wrote to my family that the life up here is just making me lazier than ever."

"How about the extended-order work? You can't loaf much in that, can you?"

"Well, our company's had only one day of it. We didn't begin it as early as the rest of you. I'm afraid it's going to be fierce; but of course there's always a chance of my getting sick or having sore feet or something."

Ted laughed. "I guess you couldn't fool these army officers."

"Oh, of course I wouldn't try to fool anyone! But with my delicate constitution, I may not

stand up to it. Now, it's different with an athlete like you."

Ted gave him a poke, and then they both became still; the photographer uttered a word of warning, snapped the shutter, said beguilingly, "Now, gentlemen, still once more, please," snapped the shutter again and signified that all was over.

"Pretty good-looking bunch," observed Mark complacently, as he stood up and looked round upon the crowd. "Brampton's turned out for this camp better than either Crane or Thorpe has done. In our company Brampton just about runs things; nearly every corporal is a Brampton man."

"My corporal's a Brampton man," replied Ted; "but I wish he was either a Crane or a Thorpe man instead."

"Why? Who is your corporal?"

"A lobster named Greiner."

There was a chuckle behind them, and then a voice, "Say, Dick, there's a bouquet for you that smells like a lemon."

Ted and Mark turned their heads. In the dispersion of the crowd an ill chance had brought Greiner close up shoulder to shoulder with them, and beside him stood Meade, highly entertained by his friend's discomfiture. Others besides Greiner and Meade had overheard Ted's remark, and now they laughed at Meade's comment. Greiner muttered something about not giving a hoot for any freshman's opinion—especially a kid that was too hopeless ever to be licked into shape. Especially a puny little dub that was a drag on the whole squad. Especially a —

Ted executed a dignified withdrawal while Greiner's counter-attack, which had begun in muttering, was gaining in loudness and venom.

"Great Scott!" exclaimed Mark. "You must be a happy family! After you've tented with that for a month, I guess I won't seem so bad as a roommate. What?"

"You have your good points," admitted Ted. "So has Greiner, I suppose, though he doesn't show them to me very often. It will be thumbs down for me now more than ever."

"Well, cheer up," said Mark. "It's a soldier's duty to suffer, if not to die, for his country."

"That may be," Ted answered. "Now I'm going down to learn how to shoot for it."

"I'm going to lie down and rest first," said Mark.

Ted jeered at him, but he declared that when one got so few good chances to rest it was foolish not to grasp every opportunity.

On the drill ground Ted found nearly all the men of the regiment scattered in small groups down near the railway embankment. Against the embankment at intervals targets had been set up, and already the practice had begun. Ted went from group to group looking for one that he might identify as belonging to Company B, and at last he came to it. Lieut. Wharton was in charge.

The range was short—only about fifty feet. The fellows in the group were from other squads; Ted did not know any of them by name. He stood looking on and waiting his turn; each man had ten shots from the kneeling position. The target was a sheet of paper about two feet square, with a bull's-eye in the middle and concentric circles round the bull's-eye. After a man had finished firing, he put up a fresh target in place of the one that he had been perforating. Ted was absorbed in watching the practice when the lieutenant summoned him.

Ted took the rifle, which was smaller than the regulation rifle, and crammed a clip of cartridges into the magazine. Then he knelt, rather too conscious that the lieutenant was watching him keenly.

"Use the open sight," said the lieutenant. "Aim at the bull's-eye. Get the left elbow well over the left knee."

Ted followed instructions, aimed and fired. The target remained unscathed. Ted threw out the cartridge, aimed and fired again—with the same mortifying result.

"How awful," thought Ted, "if I shouldn't hit it once in ten shots!"

He felt his face growing hot under the interested scrutiny of the lieutenant.

He was about to aim for the third time, when the lieutenant said:

"What's the range?"

Ted looked at him, not quite understanding. There was a glimmer of amusement in the lieutenant's eyes.

"About how far away is that target?"

"About fifty feet, I should think."

"Yes. And what are your sights set for?"

Ted inspected them and grinned sheepishly. "Five hundred yards," he answered.

"Yes. Your bullets must have struck well up on the embankment. Now adjust your sights and see what you can do."

Then, while Ted was making the adjustment, Lieut. Wharton continued:

TED BROUGHT OUT HIS WATCH AND STRUCK A MATCH

on half a dozen others. After the last man finished shooting, I changed the sights when you weren't looking. Every man that I tried that on did just what you did. Remember: always before shooting see that your sights are properly adjusted."

Ted said he thought he should not be likely to forget. He had the satisfaction of finding that his remaining eight shots hit in or near the bull's-eye.

"That's pretty good," said Lieut. Wharton. "You'll learn to shoot. You'd have done better still if instead of pulling the trigger you had exerted a slow, steady pressure. Take up the creep slowly while you get your aim and then just press; don't pull. Next!"

Ted withdrew, much elated. He went up to his tent, took his rifle, and then, kneeling or lying prone in the company street, practiced for some minutes aiming at objects two hundred yards away and pressing the trigger in the manner that Lieut. Wharton had advised.

Gray came up while he was thus employed, and Ted asked him how he had fared.

"Ten bull's-eyes," Gray answered.

"You didn't!"

"Sure. It was just like picking cherries."

"You must be a natural-born shot."

"It may have been a fluke. Perhaps when I go up against the real test to-morrow I'll be one of the worst."

"I guess not. There's no fluke about ten bull's-eyes. I was thinking I was pretty good because I missed the target only twice."

Then, unwilling to assume the entire responsibility for those two bad shots, he told Gray how they had occurred.

"Now, wasn't that a dirty trick of Wharton's!" Gray ejaculated. "Just the kind of man he is—laying traps to trip a fellow up! I bet there's not another officer in the service that would do such a thing."

"Oh, it was all right!" Ted answered.

"This test didn't really count; it doesn't go on our records. And he was good-natured about it—not sarcastic the way he often is."

"You've got a forgiving spirit—that's all I can say. After I clean my rifle, don't you want to go for a swim?"

"Yes. I'll stay out here and practice squinting and trying to hold the gun steady."

A moment later Gray came to the entrance of the tent and called to Ted:

"You haven't seen the ramrod anywhere, have you, Ripley?"

"Isn't it hanging on the nail?"

"No. I'll bet that pig Greiner has hidden it so that he'll be sure of having it when he wants it."

Gray disappeared into the tent again and a few moments later emerged triumphantly with the ramrod.

"Just what I thought!" he cried. "I found it under his mattress. Isn't that the limit?"

Ted came and sat beside him while he cleaned his rifle. They discussed what to do with the ramrod. Gray thought it might be a good joke to hide it and tell all the members of the squad except Greiner where it was. Ted pointed out that in such a case Carton would be sure to tell Greiner, and suggested that they simply hang the ramrod up in its proper place.

"I guess that's best," said Gray; "but I'm going to give Greiner a good roasting for his meanness."

After retreat that afternoon, when the fellows crowded into the tent, put down their rifles and took off their belts, Greiner sat down on the edge of his bed. Gray watched him out of the corner of one eye, and saw him after a while fumbling furtively under the mattress. "Looking for the ramrod, Greiner?" Gray

DRAWINGS BY NORMAN ROCKWELL

"OH, DRY UP, YOU TWO, OR ELSE GO OUTSIDE SOMEWHERE AND GET IT OUT OF YOUR SYSTEMS!"

makes in the target practice; Capt. Hughes told me so. We've not been any too good so far, but if we can buck up now and turn in a top-notch score it will make all the difference. I know we have four pretty good shots. Carton, here, and Adams and Howland have all shot before, and if I don't make an expert rifleman I ought to be ashamed of myself. How are the rest of you fellows?"

Stevens said that he was a fair shot; the three others confessed to entire ignorance.

"Well, it looks as if five of us would have to be counted on to bring up the average," remarked Greiner. "I suppose there are other squads in which there will be three poor shots, but it's certainly a handicap."

"You're quite a crack shot, are you, Greiner?" asked Gray.

"I was on the Brampton Rifle Team, and made top score," Greiner answered. "All you need to be expert rifleman is to make 210, and I made 221. I'd like to bet there won't be many scores in B company better than that."

"I never knew till this moment how much pleasure it would give me to find I was a natural-born shot, able to beat the Brampton crack," remarked Gray.

"You probably won't find you're any such thing," retorted Greiner.

He took his rifle and the ramrod and went outside, where he would not be bothered by any further irritating remarks.

Gray addressed Carton in a manner that

sang out. "It's not where you put it—which was no place for it; it's where it ought to be."

"What are you talking about?" Greiner got up, with a scowl, and took the ramrod down from the tent pole.

"Me? I was talking about a squad corporal that sneaks away with the squad ramrod and hides it under his bed."

"What business have you prying round under my bed?"

"No pleasure, I assure you. I wanted the ramrod, and when I couldn't find it I remembered that it was always you that seemed to have it. You can ask any of the fellows here what they think of you for trying to hide it."

"I wasn't trying to hide it from any of you fellows. I was just afraid fellows from other tents would come in and pinch it if it wasn't put out of sight."

"Oh, all right, your apology is accepted!" said Gray, with exasperating cheerfulness.

"I'm not apologizing to you, or to anyone else," retorted Greiner.

"After apologies explanations are always in order," returned the cheerful Gray.

"Great Scott, Kilkenny cats are nothing to you fellows!" exclaimed Stevens.

And the laugh that followed made the atmosphere of the tent less electrical.

In view of the early start that they were to make the next morning, Company B, with hardly an exception, went early to bed that night. By nine o'clock the six inhabitants of tent 26 were snuggled under their blankets, and conversation among them had ceased. Ted was the last to fall asleep; he heard the even, regular breathing first of one and then of another; it made him feel drowsy just to hear them.

And then, after what seemed to him an intolerably short time, he was suddenly roused from sleep by the notes of the bugle; they were dying away as he got himself completely awake. It was still dark, but he could dimly see Greiner sitting up in bed.

Greiner yawned, ran his hands through his hair, and shook Carton, who was still asleep. "Get up!" he said under his breath.

"First call!" Ted shook Gray and Bradford, and Greiner roused Stevens. All of them yawned and muttered sleepily and then proceeded to dress with as little noise as possible, mindful of the captain's instructions.

They heard sounds and whispers from the neighboring tent; evidently everyone was up and doing.

"I didn't know it was so dark at this hour!" muttered Bradford, as he searched for his leggings.

"Some one's swiped the newspaper that I put down to stand on!" complained Gray. "Now I'll get my feet covered with sand."

"Well, you needn't make so much noise about it," said Greiner, with hushed asperity.

"Beefing away, always beefing away," observed Gray under his breath, as he stood up and pulled on his trousers.

Bradford was the first to leave the tent; in a moment Ted joined him outside.

"Queer how quiet everything is," said Bradford.

"I know it," Ted answered in a puzzled voice. "Those fellows in the next tent that we heard a few minutes ago—what's happened to them?"

The two stood still, listening; there was a strange quiet brooding over the street.

The others came out, and also expressed surprise and bewilderment.

"It looks to me as if everyone in the street except ourselves had overslept," remarked Carton.

"What time is it, anyway?" asked Stevens.

Ted went back into the tent and brought out his watch. He struck a match and announced in amazement:

"It's quarter past ten!"

"What!" exclaimed Greiner.

Ted held his watch to his ear and satisfied himself that it had not stopped. Gray burst into a laugh.

"It was taps you heard, not reveille!" he said. "It was taps you got us up for, Greiner! Oh, you boob corporal!"

All the fellows except Greiner were chuckling as they went back into the tent, and while they again got ready for bed all except Greiner gave vent at frequent intervals to their mirth.

"Those fellows in the next tent that we heard," said Ted, "they must have just been settling down to sleep."

"This will be a great tale to tell in the morning," said Gray. "Greiner, old top, I guess you'll never hear the last of this. A corporal that can't tell taps from reveille!"

"I heard only the end of it. I was sound asleep. I just heard a bugle sound," said the goaded and enraged Greiner.

"As I remarked to you this afternoon, your apologies are accepted and explanations are always in order," replied Gray.

"Oh, dry up; you make me sick!" returned Greiner.

With this exchange of amenities the occupants of tent 26 prepared once more for slumber.

TO BE CONTINUED.

THE STRANGE CARGO OF THE LITTLE MULDOON

By Charles Boardman Hawes

IT was young Skofield who discovered the belated side show waiting on the pier at Wakefield for the Muldoon—the little steamer that made a meagre living for four men by carrying freight up and down the bay. As Skofield sat at the bow of the boat, the anxious manager hailed him and asked whether the Muldoon could be chartered to carry the properties of the side show to Pinkham's Cove, where the big tent was already pitched.

Young Skofield summoned old Capt. Murdoch, who scratched his head reflectively and remembered that between the shingles amidships and the potatoes forward there was a large vacant space that might hold even the mountainous pile of dunnage belonging to the side show.

A bargain was struck, and the trunks, the tent and the other paraphernalia were shoved forward over the shingles and stowed in the empty space; the manager and his men boarded the trolley car, and the little Muldoon put out to sea. But the first piece of baggage—a long, peculiarly shaped chest with holes bored in each end, containing something that was very heavy and that slipped strangely from side to side—had been pushed carelessly from the shingle pile; it had fallen with a bang on the keelson of the Muldoon and irreparable damage had been done.

Three hours later, when the Muldoon was rounding Fishtail Head in the teeth of a lively tide rip, Capt. Murdoch, with a puzzled expression, leaned over the open hatch. The sizzle and chug of the engine, the thrashing of the paddle wheels, and the whirl and hiss of the seas that beat against the Muldoon's broad sides continued with unbroken regularity. He could hear the swish of bilge water in the depths of the hold and the creak of straining timbers; but besides those familiar sounds was another, insignificant to be sure, and probably of little import, yet because of its strangeness, and above all because Capt. Murdoch could in no way account for it, ominous out of all proportion to its volume.

"Skofield!" Capt. Murdoch shouted. "Lay forward and put your ear to this 'ere hatch!"

The youngest of the Muldoon's crew came sauntering up the deck. "Yes, sir," he said, grinning at his wrinkled superior.

Capt. Murdoch scratched his head impressively. "Put your ear to the hatch and tell me what you hear, Harry," he commanded. "Your ears is young and had ought to hear sharper'n mine."

Young Skofield got down on hands and knees. For a moment he heard only the wash of the sea and the throb of the engine; then his expression changed sharply, and, crouching on the deck, he listened with a sudden intensity that confirmed the old man in his opinion that something unaccountable was going on below.

"What d'ye hear, Harry?" the skipper whispered hoarsely.

"A mighty queer noise!"

"Well," said the old man, "'tain't 'taters, that's sure."

"What?"

"'Tain't 'taters," he repeated, "and 'tain't Seth Granby's shingles; they ain't neither of them making no such cur'us noise, and if 'tain't them, must be it's the circus, 'cause we ain't got no other cargo."

Capt. Murdoch's logic admitted no contradiction. The entire cargo of the little Muldoon was divided into those three parts: forty bags of potatoes shipped from Wakefield to John Ash's store at Peck's Point, fifty bundles of shingles billed to Seth

Granby at Duckbill Island, and the bales and boxes belonging to the side show; and neither cedar shingles nor carefully stacked bags bulging with new potatoes would produce of their own accord a muffled, insistent thump! thump! thump!

Capt. Murdoch looked up at the fleecy clouds overhead; he looked down at the gray water under the rail. Dickinson, the mate, was at the wheel; Crabbe, the engineer, was wielding a coal shovel at his post of duty. Obviously, Capt. Murdoch and Harry Skofield must solve the mystery unless it was to go unsolved, and Capt. Murdoch had no desire to venture into the dark and evil-smelling hold of his little craft.

"Harry," said he, "s'posin' you take your leetle flash light and crawl in and see what's wrong."

Slipping over the edge, Skofield dropped on the shingles; then he leaned over and, with the aid of his electric torch, peered earnestly into the recesses of the hold; but he could distinguish only the even piles of shingles and indistinctly the knobby bags of potatoes beyond them.

"I can't make out a thing," he declared.

"Don't git out! Stay where ye be!" the skipper shouted, when Harry took hold of the side of the hatch and prepared to climb out. "Hear that!"

While Capt. Murdoch was speaking, the muffled thumps had been rumbling in a monotonous undertone, and had culminated in a loud crash. The shingles under the hatch settled, creaking, into new positions, and all was still.

"Maybe she's sprung a leak! Maybe we're sinking!" Capt. Murdoch gasped. "Git in there quick, Harry, there's a good boy, and see what in tarnation's gone wrong! I'm feared the Muldoon's bottom's bustin' in on her."

Skofield was a little alarmed. "Well, if that's so, I don't see what I can do to —"

"Git!" Capt. Murdoch's ire brooked no insubordination.

Ducking under the deck and holding his flash light in front of him, Skofield crawled forward on hands and knees into the darkness. He was puzzled by the noises and a little frightened by their sudden stopping, but nothing seemed to be wrong. The shingles, the trunks and bales, and the bags of potatoes were just as before, yet it was possible that the Muldoon was taking in water. He found a crevice between the potato sacks and the trunks and lowered himself into it.

There was no room to manoeuvre the light; so he began reaching down into the narrow spaces that he encountered. Slowly his fingers crept along the damp planks, but they met no inrush of water.

Skofield was on the point of straightening up, reassured, when close at hand and much louder now he heard again that thump! thump! Something moved; the cargo in his immediate vicinity was shaken by a vast upheaval; a trunk above him—it must have been poorly balanced—

fell over against the potatoes, and neatly covered the open end of the pocket into which he had lowered himself. Under that mass of luggage was something alive and free—something that was forcing its way little by little up through the entire cargo of the little Muldoon.

The trunk that had toppled across the top of the pocket in

which young Skofield was crouching was settling lower and lower. He felt one corner against his back. It pressed harder and harder, until it had forced him down flat on the potato sacks; he could hardly breathe. Unable to move the weight of the trunk because of his cramped position, and realizing that any shifting of the cargo might send bales and boxes down upon him, he shouted for help.

"I ca-a-n't he-a-r ye!" came Capt. Murdoch's high-pitched reply. The captain's ears were far from keen.

"Help!"

"Ye-e-y? Wha-at's that?"

"He-e-lp!"

"Th' ain't no help in her innards; must be hay left from last trip."

The thumping had changed to a scratching, rustling noise. The boxes creaked, and the tent was pushed to one side. Skofield felt a hard, cool object touching one hand. There was another bump, a renewed creaking as the boxes changed position; then a creature that breathed hoarsely and quickly nosed his arm.

In a frenzy of fear Skofield turned his flash light on it, and what he saw filled his heart with terror. A long, scaly reptile was working its way up through the cargo; its claws were scratching at the folds of the tent; its breath came in quick gasps as it squirmed forward. Skofield stared at it, horrified, and saw its small, twinkling eyes come into view and its long jaws open, revealing great rows of teeth. It was a huge alligator.

Enraged by the pressure of the cargo and by the bright light, the creature, glaring at the boy with its little eyes, struggled forward inch by inch. Thrusting out both hands, Skofield gripped the dilated nostrils and tried vainly to push back the ugly head. At the same moment the cargo settled again, and the corner of the trunk cut into his back and pinned him helplessly in the path of the beast.

Although the alligator was not yet near enough to seize him with its shear-like jaws, Skofield could reach its head with his extended arms.

Finding that he could not keep it from advancing, he tried to cut off its wind; but although he gripped its nostrils with all the strength of his hands, the only effect seemed to be to enrage the creature still further, for with glaring eyes and clicking teeth it squirmed closer and closer.

Skofield realized that he could not prevent the big beast from crawling out where it could reach him.

"Help!" he yelled once more; but he got no response, and knew that he must rely upon himself alone, and he must act quick. The nose of the ugly reptile was nuzzling his forehead.

For a moment he shut his eyes; then out of the blackness came an idea. Dropping the flash light, he began to fumble at his belt buckle; but at first, because of his cramped position, he could not unfasten it. He tugged at it frantically and at last succeeded in getting it loose. With trembling fingers he pulled it off. Then, working his hands forward and feeling his way by sense of touch, he began to twist the belt round the grim snout of the alligator. As if divining his purpose, the big reptile snapped its jaws and moved its head from side to side; but Skofield hung on, and finally pulled the belt tight and buckled it.

After a long, fumbling hunt he recovered the flash light and looked into the wicked little eyes of the brute. Its jaws were locked and it could not open its mouth. The thrashing tail was confined by the weight of many trunks and bales.

By the help of the flash light young Skofield studied the situation. Getting himself together, he gave a sudden squirm and twisted sideways. The corner of the trunk dragged across his back, tearing the skin, but he felt himself suddenly freed from the terrible pressure. Drawing a deep breath, he wormed his way backward. His feet were kicking back and forth in the open air when he was terrified to feel a firm grip on his ankles.

"Hi! Quit your hollering! It's me that's got hold of ye! I'll pull ye out!" It was Capt. Murdoch's voice.

"I want to know!" the captain ejaculated when he heard the story. "I want to know!" And taking young Skofield to the cabin, he applied witch hazel to his lacerated back.

When the manager of the side show came on board at Pinkham's Cove, the old man addressed him so violently and so fluently that he did not even protest at Capt. Murdoch's bill.

"I'm glad, though, that Alexander wasn't hurt," the manager said, as he helped drag the alligator on the pier. "He's a kind of pet of mine."

"Pet!" gasped Capt. Murdoch. "Pet! Je-hoshaphat!"

But young Skofield jumped to the pier. "Hi!" he yelled. "Give me back my belt! He's got it round his jaw."

WITH THE AID OF HIS ELECTRIC TORCH HE PEERED EARNESTLY INTO THE RECESSES OF THE HOLD

FACT AND COMMENT

Do not forget that "plan" is half of "planting"—and the first half, at that.

Three Neighbors ever good
Are Mountain, Stream and Wood.

Do not think you can discharge your patriotic duty toward the food supply by keeping a bee.

BREAD has gone to fifteen cents a loaf in many parts of the country, and cheese is thirty-five cents a pound. The third staple of the simple and idyllic life is fortunately no dearer; young couples need not economize in the use of water.

WAR brings many curious changes. A few months ago the American Bible Society sent to Panama a fine power boat, the Goodwill, for the use of its new Bible House there in supplying Bibles to the vessels that pass through the canal. Now the boat, mounting a gun, is in the government patrol service.

WHEN you are tempted to use the word "data," stop and reflect; there is a good word, "facts," that in most cases is better. Remember that "data" is a plural noun. "Datum" is the singular, and it means something that is known already. Data are things given, known. It is a mark of ignorance to say "this data."

PHOTOGRAPHS of St. Paul's Cathedral in ruins, as a result of Zeppelin bombing, were on sale in Berlin at the same time that the cathedral itself was crowded, on the occasion of the British thanksgiving at the entrance of the United States into the war. But the Germans solemnly affirm that all their war news is true.

ALTHOUGH saving waste paper is a practice that is exceedingly useful just now, it may nevertheless be a source of serious danger if the paper is piled loose in the cellar, in closets or in the attic. In several instances school authorities have had to stop children from storing paper in the basements of school buildings. The only safe way is to pack the paper in well-tied bundles, to keep the bundles separate one from another, and to send for the junkman before any large quantity accumulates. Newspapers, wrapping paper and magazines should not be mixed.

AN English observer who was in Petrograd during the Russian revolution says that the orderly, self-restrained conduct of the people was remarkable; and he is certain that their behavior was owing to the prohibition that has been in force since the war began. If the overturn had come a few years ago the revolutionists would have been inflamed with vodka, and bloodshed and vandalism would have been inevitable. National prohibition has made Russia able to bear the losses and sufferings of the war stoutly, and has given the masses the strength and the self-control to carry out the most glorious, because the least bloody, of democratic revolutions.

WHEN the British Empire is reconstituted after the war, Canada will undoubtedly ask that the British West Indies be incorporated with the Dominion. There are six groups of the islands, having an aggregate area of about twelve thousand square miles, or the combined area of Massachusetts and Connecticut, and a population of a million and three quarters, of whom much more than one half are colored. At present the trade of the islands is chiefly with the United States, and next with Great Britain. The trade with Canada is small. Union with the Dominion would undoubtedly increase that trade, but hardly

enough to make it true, as a Canadian correspondent of the London Times puts it, that it "would make the Dominion the economic equal of the United States, if not its superior."

THE SPRING OFFENSIVE

THE great German retreat did not disarrange the plans of the British and French commanders; the battles in front of Arras and along the river Aisne began before the Germans were safely established behind the Hindenburg, or Siegfried, line, and have been among the bloodiest and most desperate of the war.

The line on which the Germans meant to stand runs from Arras to Soissons in front of Cambrai, La Fère and Laon. The British undertook to turn the northern end of this line and the French the southern end. Real success at either end would mean the retreat of the Germans to the very border of France. To accomplish such a success the British must get through to Douai or the French must take Laon. The British, who are now in much stronger force than the French, began well by breaking through the original Siegfried line, and pushing the Germans back to a second line prepared for just such an emergency. The Germans have brought up tremendous reserves to hold that line; so far they have held it, but they have not regained the lost ground. They have made a score of desperate counter-attacks, but the British artillery is too powerful for them. That is a situation few of us ever expected to see, but it has come to pass: the Germans are completely outgunned on this most important of fronts.

The British artillery has again and again blasted to pieces seemingly impregnable trench lines and enabled the charging infantry to gain and hold ground with comparatively small loss. If the British can maintain their superiority in gunfire, they can certainly compel a continual German retreat; but if the morale and spirit of the German army is not shaken, the advance of the Allies will be a long and bloody and horrible fight across a blackened and devastated waste. The British officers think that the German morale is weakening under the pounding of the big guns. We must wait and see whether they are right. If they are mistaken, there will be time enough to train and opportunity enough to use all the American soldiers we can send across the ocean.

The French will support gallantly the attacks of their allies, but the burden of the fighting this summer must fall upon the British. France has given its best during three terrible campaigns, and it is far spent. Silent, uncomplaining of its fate, it has held its shield before a threatened civilization.

It is time that the rest of the world fought for France.

THE CRIMES OF GERMANY

THE world is not hostile to Germany because it is unwilling that Germany should have a fair chance in the world, or because it had in the beginning any special love for the enemies of Germany. When the war began it was a fair field and no favor with most of the neutrals. Germany has alienated a dozen nations by the faithlessness, the brutality, the arrogant contempt for the rights of others, that its government has displayed at every stage of the war. It has been its own worst enemy; it has written its own condemnation in the eyes of the world; it has done its best to convince everyone that German domination in the affairs of mankind would be a calamity that civilization must avert, even if it perish in the attempt.

The violation of Belgium and the looting and burning of Belgian cities and French villages; the horror of the Lusitania and the atrocity of the submarine warfare, in which the murder of noncombatants and neutrals is cynically planned and coolly carried out; the spiteful destruction of priceless memorials of the piety and artistic feeling of the human race; the invention of the Zeppelin raid and the poison-gas attack; the offenses—some of them nameless—against the liberty and the honor of French and Belgian noncombatants; the wanton and wicked desolation of the evacuated country of the enemy; the deliberate sinking of hospital ships; the Armenian massacres, which the Kaiser could have stopped by raising his finger—those things have one by one brought about a universal hardening of the world's heart against the government that can order such deeds.

We long hoped that the charges against the Germans were exaggerated through passion and prejudice. Here and there single accusations may be without basis, but the great

outstanding facts are well known. Our own diplomatic representatives resident abroad have told us enough in their official reports to convince us that Germany makes war in defiance of the laws of decency and humanity that other nations recognize; that it considers the slow and painful progress that civilization has made as a thing of no moment, a thing to be ruthlessly sacrificed if it restricts German ambition. The Kaiser once ordered his soldiers to fight as the hordes of Attila fought and to make the name of German dreaded as that of Hun was dreaded in the ancient days. They have obeyed him; but is it necessary to remind them that Attila and his hordes were not beloved among the civilized people of those early centuries? Neither can any nation that fashions itself upon such a model expect to prosper in the affections of mankind.

AMERICA DAY

ON April 20, one day later than the anniversary of the Battle of Lexington, all England celebrated "America Day." Throughout the kingdom the Stars and Stripes were displayed as freely as the Union Jack; English men and women wore the American colors and carried small American flags; and from the Victoria Tower at Westminster, above the British Parliament, for the first time in history flew a foreign flag—the American. Not even the alliance with France, cemented by more than two years of common suffering and sacrifice, has called forth in England any demonstration of friendship at all comparable with that given for America and in gratitude to America for its entry into the great war for freedom. One language, one literature, one blood—these unities have done their work at last.

The solemn service at St. Paul's Cathedral was the most striking expression of the national sentiment. Among the four thousand persons who thronged the great church were the King and Queen, ministers of government, representatives of the army and the navy—and also a hundred American wounded, come recently from the firing line in France. There were, too, some veterans of the Civil War, who had marched in a body from London Bridge carrying a banner inscribed, "American Civil War Veterans: Not for Ourselves, but for Our Country."

In the cathedral, at the entrance to the choir, the Stars and Stripes and the Union Jack were draped side by side. The Archbishop of Canterbury and the Bishop of London assisted the clergy of St. Paul's in conducting the service; Bishop Brent, the American Bishop of the Philippines, preached the sermon. The band of the Welsh Guards, stationed at the chancel rails, played The Battle Hymn of the Republic and The Star-Spangled Banner, with a heavy roll of drums, while the congregation sang the words. An English King singing The Star-Spangled Banner in St. Paul's Cathedral, beneath arches from which hung battle-torn British flags of the Revolutionary War—what scene of more dramatic and hopeful international significance was ever staged?

RAISING THE ARMY

CONGRESS has decided overwhelmingly in favor of the selective draft. There is no reason for shuddering when it is called—or mis-called—conscription, for conscription is merely enrollment; the army is made up by draft from those who have been conscripted. A large part of the Union force during the Civil War, as well as of the Confederates, consisted of men drafted from the enrollment; and no one asks a Grand Army man to-day whether he volunteered or was conscripted. They all fought well, as Frenchmen and Englishmen and Germans who did not volunteer are fighting to-day.

No doubt the advocates of the volunteer system were logically right on one most important point. Granting that the volunteer system may not produce so many soldiers as we shall need for active service abroad, it would give us a great many thousand men, and a force so raised can be collected and made ready for the front more quickly than a force gathered by draft. But it is understood that the governments of our allies do not regard the sending of reinforcements to their armies in the field as the most pressing need. So the chief argument for the volunteer system is not a controlling argument.

On the other hand, the contention is valid that the principle of universal liability to serve and universal training for service, combined with an impartial method of designating the requisite number of persons to serve at any

particular time, is strictly democratic, absolutely fair, and the only sure way to obtain the force required. It is a little slow now, because we have to begin at the beginning; but once established it will be even more prompt and efficient than the volunteer method, and it cannot fail, as the other system might have failed.

We have no hesitation in accepting it as a wise and necessary national measure, not only for the present emergency, but as a permanent policy. So far is it from introducing militarism that it is the most obvious and effective pacific measure for the years to come. That statement might have been denounced as absurd a few weeks ago, but to-day, when we are in league with other powers, it is not so likely to be questioned. When this war ends, if it shall end as we hope it will, all the victorious nations, our own among them, will be bound by a great and solemn resolution that there shall never again be an unprovoked war. If we are bound by such a covenant, the only use of the actual and potential force that universal training and universal liability to service will give us will be to help in preserving international peace. If we were to use it for aggression, we should bring down upon us the hostility and contempt of the civilized world.

And if the war should end otherwise,—if we then had to prepare for the attack that would surely be made upon us by our present enemy,—how weak and puny we should be in a military sense, if we had to rely on green and untrained volunteers to withstand a veteran army, the most highly trained of any in the world!

In either event, adequate preparation makes for peace.

CROPS FOR LATE PLANTING

IN February, 1915, beans sold at retail for seven cents and onions for three and a half cents a pound, and potatoes for twenty cents a peck. In February, 1917, the corresponding prices were fifteen cents for beans, twelve cents for onions and seventy-six cents for potatoes. Such facts, added to the world war and a shortage in the wheat crop, have given new importance to farm and garden.

People who never planted before will plant this year, and many who plant every year will plant more than usual. But the scarcity of labor will hinder some who depend on outside help. Others will find their interest roused too late to plant with their better-prepared neighbors. Can time thus lost in April and early May be regained in late May and June? Not entirely, of course, yet so much can be done by the use of late crops that by planting in June or July every family with a decent patch of ground at its disposal can still provide a winter's supply of many wholesome vegetables; and farmers not only can raise salable crops of considerable value but can largely extend their supply of forage, increase their capacity to market stock and prepare their soil for next year's planting.

Whenever a general shortage of vegetables occurs, turnips are in excellent demand. They need not be planted until July 4, and, if well fertilized, they often do best on fallow ground. Buckwheat is a rather old-fashioned crop; but it can be raised on relatively poor land, can be ground at any local mill, and need not be sown until early July. Winter cabbage can be put into ground that has already borne early peas. If parsnips have failed to start from early plantings, they can be resown up to mid-July, and under favorable conditions a very late planting has been known to supply a family with excellent vegetables throughout the winter, although the roots were scarcely of merchantable size. Long after the growing season seems to be passed, turnips and parsnips will still enlarge their roots. Turnips need not be harvested until the rush of fall work is over; and parsnips need not be harvested at all until the table or the market calls for them, if they are so covered that frost will not prevent digging. Sweet corn can be planted in the latitude of southern New England as late as July 4, and the season of its use as green corn can be materially prolonged if the home gardener will cut and stack the stalks with the ears upon them when a killing frost threatens. The protection of the stack wards off the cold, and the green stalks retain enough moisture in cool weather to keep the ears fresh for a considerable time; and those late ears, or "nubbins," are often the sweetest of the year.

Besides those late crops, the gardener will remember celery, which can be set out from mid-June to August 1; carrots, which can be planted nearly to midsummer; and cauliflower, which can be sown as late as June 1 and transplanted up to the latter part of July. He

can start his endive from June to August, and his corn salad, or fetticus, for winter use in August, or even in September.

These are merely suggestions. The belated farmer or home gardener who consults his county agent and studies the best practice of experienced neighbors may yet find October fruitful.

CURRENT EVENTS

CONGRESS.—The conference committee on the army bill placed the age limits for the draft at 21 to 30 years inclusive, and struck out the provision permitting the Roosevelt volunteer army to be enrolled for service in France. —The House defeated the objectionable censorship section of the espionage bill, but inserted a provision very similar in effect, which did, however, guarantee a jury trial to any person accused of publishing military information that might be helpful to the enemy. The bill was then passed, 260 to 105. The Senate amended the bill by limiting the power of embargo that enabled the President to forbid American commerce with a neutral power that permitted imported supplies to pass across the German frontier. At the President's request it later reconsidered its action. —The House passed the bill authorizing the President to put into service enemy vessels seized in American ports. —On May 9 the Ways and Means Committee presented the war tax bill to the House. It proposes extra taxation to raise \$1,800,000,000 a year by increasing tariff and excise duties and the income and inheritance taxes, by laying new imposts on profits, luxuries, proprietary articles, railway and amusement tickets, and so forth, and by an increase in postage rates. —Mr. Balfour addressed the House on May 5 and the Senate on May 8.

RUSSIA.—On May 3 it was announced that the Russian government had sent a note to all the allied nations assuring them that Russia would never consider making a separate peace with Germany. That was followed by demonstrations in Petrograd directed against the Foreign Minister, Milukoff, by radical members of the soldiers' and workmen's party. The provisional government declined to modify the note, although it consented to issue an "explanation," which declared that Russia had no desire to conquer

or annex the territories of other countries, but insisted on the right of each nation to determine its own destiny. The Council of Workmen's and Soldiers' Delegates thereupon passed a vote of confidence in the provisional government. On May 9 the provisional government declared in favor of a coalition ministry, and through M. Kerenski invited the Radicals and the Socialists to designate representatives to join the Cabinet. —Mr. Samuel Gompers, president of the American Federation of Labor, sent a message to the Council of Workmen's and Soldiers' Delegates, urging it to stand firm against the machinations of agitators who meant to serve the ends of the Prussian autocracy.

AUSTRALIA.—The elections have resulted in a parliamentary majority for the present ministry led by Premier Hughes.

BRAZIL.—Senhor Mello Pechana is the new Foreign Minister of Brazil. He is in sympathy with the Entente and with the United States.

REFORM IN GERMANY.—The Constitution Committee of the Reichstag has recommended that the Imperial Ministers of War and Marine be made responsible to the Reichstag, that the Emperor's decrees and ordinances shall be valid only when countersigned by the Chancellor, who shall be responsible to the Reichstag, and that military and naval officers heretofore appointed solely by the Emperor shall be appointed by him with the advice and consent of the war ministers, who are to be responsible for their offices to the Reichstag. The Socialists propose universal suffrage, including women as well as men, but the committee is not likely to recommend that. —In Hungary, Count Tisza, the Premier, declared against any attempt to jeopardize the fate of the fatherland by "a frivolous attempt at universal suffrage." His refusal to listen to the rising demand for electoral reform has increased the bitterness of party feeling in the Parliament, and was followed by strikes, openly declared by workmen as demonstrations in support of electoral reform.

PREPARATIONS FOR WAR.—The War Department has given orders to form nine new regiments of army engineers, which will be sent abroad as soon as possible to assist in maintaining and improving the lines of

communication in France. Railway equipment, engines and cars sorely needed in France will also be sent by our government. —The United States government will act as fiscal agent for the Allies in this country, instead of the private banking firms that have hitherto served in that capacity. —The two billion dollars of the so-called "liberty loan," which was the first of the authorized bond issues offered to the public, was about half subscribed by May 10. —It was announced that almost two hundred thousand men had volunteered for the army corps that Col. Roosevelt wishes to raise and dispatch to France. —The Shipping Board will ask Congress for \$1,000,000,000 to build a great merchant fleet, and proposes to take for government use the output of every steel mill in the country.

THE GREAT WAR

(From May 3 to May 9)

The British and French continued to hammer at the German line all the way from Lens to Reims. The British gains were not striking and must have been made with considerable losses, but the German counter-attacks, which were promptly made, were at least as costly and regained only part of the ground that had been lost. At Fresnoy, Bullecourt and Chérisy the British troops came up squarely against the prepared positions known as the "Wotan" line that runs from Queant to Droocourt. Those are now the main defenses of Douai, which is the British objective at present.

Along the Aisne the French pushed their line forward until they controlled the high ground of the Craonne plateau and stood within five miles of Laon, the southern buttress of the German line that is under attack. The French, in their operations, took about six thousand prisoners, which makes twenty-nine thousand since the beginning of the offensive. The fighting along the entire western front is as hard as any that has taken place during the war. The village of Fresnoy changed hands half a dozen times in hand-to-hand combat.

There were artillery actions and local engagements in Macedonia, the report of which contained the news that contingents of Greek troops loyal to the Venizelist government of northern Greece were fighting beside the French in the Monastir region.

There were indications of a German concentration in the region of Libau, Russia, and the Russian leaders expected an attack there as soon as the Germans gave up hope of persuading Russia to a separate peace. The discipline among the Russian troops at the front appears to be loose at present, and Russia is certainly in no position to undertake any offensive movement.

The submarines, according to the weekly report from London, sunk 46 British ships during the week. The Dutch fishing fleet has refused to take the sea, owing to the continued destruction of fishing vessels by German submarines, although the German government has guaranteed the safety of fishing vessels. Fourteen men from the American ship Rockingham and five from the Vacuum, supposed to have been lost, were rescued, after all.

The British transport Arcadian has been sunk in the Mediterranean Sea. Two hundred and seventy-nine men were drowned.

Germany has apologized to Argentina for the sinking of the ship Monte Protegido, and Argentina has accepted the apology.

An international conference of Socialists has been called to meet in Stockholm, to consider the possibility of bringing about a general peace. The affair is under the direction of

French soldiers advancing on St. Quentin. They are crossing a bridge destroyed by the retreating Germans, and have to pick their way cautiously along the edges of the bridge, which may cave in at any moment.

Dutch and Scandinavian Socialists, but it is doubtful whether there will be representative delegations from any of the belligerent countries except Germany and Austria. A meeting of leading American Socialists held at Washington on May 8 condemned the conference as a pro-German undertaking controlled from Berlin.

The Swiss newspapers heard that the unrest in Bohemia was so serious that martial law had been proclaimed there, and that all newspapers had suspended publication. There was also a report that an unsuccessful attempt had been made to assassinate the German Emperor.

A new Greek Cabinet has been formed, led by Alexander Zaimis. The new Premier is not unfriendly to the Entente.

The food situation in Great Britain is increasingly serious. If it does not improve, a rationing plan, like that organized by Mr. Hoover in Belgium, will be put in force.

Flour Facts

Color in flour is an indication of its character.

Learn to tell from the color of your flour whether it has been bleached or otherwise chemically treated.

The best flour for bread, biscuits, or pastry is not chalky-white in color, but a delicate creamy-white.

Learn to know this wholesome flour color. You will recognize it in Pillsbury's Best. The beautiful, creamy-white color of Pillsbury's Best flour is natural to good, clean wheat, carefully and honestly milled.

Pillsbury's Best flour is not bleached. It never will be bleached.

The Flour Question Settled "Because Pillsbury's Best"

THE SWORD OF ARTHUR

By John Clair Minot

CASTLE stands in Yorkshire
(Oh, the hill is fair and green!),
And far beneath it lies a cave
No living man has seen.

It is the cave enchanted
(Oh, seek it ere ye die!),
And there King Arthur and his knights
In dreamless slumber lie.

One time a peasant found it
(Oh, the years have hurried well!);
It was the day of fate for him,
And this is what befell:

Upon a couch of crystal
(O heart, be pure and strong!),
He saw the King, and, close beside,
The armored knights athrond.

And all of them were sleeping
(Praise God, who sendeth rest!),
The sleep that comes when strife is done,
And ended every quest.

Beside the good King Arthur
(How high is your desire?),
His sword within its scabbard lay,
The sword with blade of fire.

Now, had the peasant known it
(Oh, if we all could know!),
He should have drawn that wondrous blade
Before he turned to go.

If but his hand had touched it
(The sword is waiting still!),
He would have felt in every vein
A lofty purpose thrill.

If but his hand had drawn it
(The sword still lieth there!),
A kingly way he would have walked
Wherever he might fare.

But, no; he fled affrighted
(Oh, pitiful the cost!);
And then he knew; but lo! the way
Into the cave was lost.

He searched forever after
(All this was long ago),
But nevermore that crystal cave
His eager eyes could know.

Pray God ye have the vision
(Oh, search in every land!)
To seize the sword that Arthur bore
When it lies at your hand.

A NEW RELIGION

YES, I agree with you. We need a new religion. The old doctrines of 'saved and lost,' of 'heaven and hell,' of 'atonement' and 'forgiveness,' and all that, are played out. The people of to-day demand a really modern theology and religion."

The two men who were discussing the need of a new religion appeared to be well-educated and cultivated. When they parted, one of them said, with a laugh, "There's nothing like progress. Better drop a word to our minister. He needs to read up and get some modern ideas."

Twenty-four hours later one of those men knocked at the door of his pastor's study in the city church to which he belonged. The look on his face was not one of easy-going complacency, but a look of fear and terror and almost of despair.

The moment the minister admitted him he cried out, "O Mr. Parker! My boy is in disgrace! He writes me he's contemplating suicide! He went on a drunken spree after one of the football games, and he's been suspended from his university. I need your help. I didn't know where else to go. To think that my boy—"

The minister knew just what to say and what to do. He emphasized the great doctrine of forgiveness and redemption, and when the father went away he carried with him on his way to his son a song of hope for the disgraced boy.

On his return he was able to tell the minister that his boy, by the grace of God, was beginning a new life.

"After all," said Mr. Parker, in reply, "there's nothing like the power of the old gospel. It endures through the centuries."

"Yes," replied the father. "It is good enough for me. It is the only thing that can save the lost."

It is one thing to discuss in a fashionable club the need of a new religion; it is another to create a religion as useful as the old gospel when your own son is a sinner.

A STAY-AT-HOME'S MEMORY

THE half dozen men who were sitting together on the hotel piazza were of the older generation, and the stories that had been told were of the war of long ago.

"I am sorry that I cannot contribute a tale of the battlefield," said one of them, at last; "but during the Civil

War I was one of the stay-at-homes. I was of a Quaker family in a country town in New York State, although that is not my excuse. My three brothers did enlist, but, at the time, I was a little too young for a soldier. Even stay-at-homes may have their war-time memories, though. I have one that came very vividly to my mind while you were fighting the Battle of the Wilderness over again just now. My brother Dan was there.

"News was a little slow in reaching our country home; but we knew that fighting was in progress and that Dan's regiment was probably engaged. Mother and I were alone, father having died the winter before. My other brothers, both older than Dan, were with the Army of the West. Our one horse had fallen lame, but I had gone on foot to the village post office, four miles away, every day for a week, hoping for a letter.

"I know it's hard on thee, taking this long walk," mother had said as I started off one afternoon, "but I have a feeling that we shall hear to-day."

"She was right. There was no letter, but a man at the office was reading a newspaper account of a battle, with a list of killed and wounded at the end. I listened until I heard a familiar name, and then started on my lonesome walk back, saying to myself, over and over, in a kind of slingsong, 'Corp. Daniel Farr—shot through the heart.'"

"As I drew near home I saw mother coming to

meet me. A twelve-year-old boy hasn't learned the art of breaking bad news, and I called to her as soon as I came within hearing distance, 'Dan has been killed!'

"You veterans of the war can doubtless call up visions of hundreds of men struck down by rifle shot or cannon ball or bayonet thrust. The picture that I see is only of a frail little woman stunned by the words that I had thrown at her, with her face as white as if the bullet that had torn her boy's heart in the Wilderness had found its way to hers on that hillside road.

"She recovered herself in a moment and came up to me and listened to what little I could add to my first abrupt announcement. Then she took my hand and we walked slowly home. 'I'll talk with thee about this by and by, but not just now,' she said.

"But I had another piece of news. 'Nathan Tinkham was hurt, too,' I told her; 'but it was only a scalp wound, and he's been promoted to be lieutenant.'"

"Nathan was the son of Hosea Tinkham, who lived two miles beyond us. Hosea had had a one-sided quarrel with father; that is, he had taken an unfair advantage, and father, being a man of peace, had let it pass in silence, and, as often happens in such cases, Hosea had never forgiven him. I felt mother's hand tremble in mine as I spoke, but she walked on very quietly.

"When we reached our home, she said, 'Now, Sammie, thee's had a long walk, but I want thee to do one thing more. I hear that Hosea Tinkham is away this week, and I know how Eunice, left alone there, must be worrying about her boy. I'd like for thee to go up there and set her mind at rest.' So I left her and trudged on.

"I found Eunice in the lane, going for the cows; and the frightened look in her eyes when she saw me coming gave place to one of relief and joy on hearing my news of Nathan. But when she asked if we had heard from Dan and I told her of his fate, she leaned against the fence and cried. I wondered at that, for mother hadn't cried; and I didn't know how to answer Eunice when she said, as I came away:

"Give my love to your mother, and tell her that I think she has the bravest and kindest heart I ever knew."

THE BOMB THAT BOUNCED

NOT long ago The Companion related the amazing part played by football during the battles on the Somme, when British troops actually kicked their ball before them across the battlefield to victory during a charge upon the German trenches. Now comes Mr. William Cooper Stevenson, in the Outlook, to show that not infantry alone have made the football field and the field of honor one: the field of the air must be considered also.

It seems, indeed, that the air service preceded the land service in employing a football against the enemy. At least a certain audacious aviator, whose biplane bore his nickname of Syd conspicuously painted on its wings, that his antagonists might know with whom they had to deal, found a use for one as long ago as April, 1916.

The town of St. Quentin, held by the Germans, knew him well; it lay in his beat or district, and he flew over the place almost daily to observe what was going on and to upset as many plans as possible. The first of April was perfect flying weather, and the townsfolk—all of them that remained—and their conquerors were equally on the lookout. At last a speck appeared in the western sky, growing rapidly larger and larger.

"C'est le bon Syd!" cried the Frenchmen. "Schweinhund!" growled the Germans, and "Good morning!" boomed the anti-aircraft guns, filling the sky with white puffs like halos. And on came the Englishman, casual and indifferent.

When directly over the *hôtel de ville* the visitor let fall a large, round object. There were frightened shrieks, "Attention!" "La bombe!" and hasty bolts indoors. But Germans and Frenchmen alike who were away from the danger zone watched it descend in hypnotized silence. It landed in the middle of the street. And then—*sapristi!*—it bounced!

Up higher than the roofs of the buildings it bounced; and then dropped to bounce again. The Germans, waiting to hear the awful crash that did not come, muttered, "Some more of that American ammunition!" and stuck out their heads—but only to spy the bouncing apparition and pull them in again with exclamations of fright. At last, however, the thing gave a final little bob and rolled peacefully into the ditch.

And then what shouts of laughter echoed through the streets of St. Quentin! The English airman had dropped a Rugby football. The saucy Syd, at the risk of his life, had successfully April-fooled the enemy.

WINNING VILLA'S FAVOR

DURING one of Villa's campaigns in Mexico several motion-picture photographers, of whom one by the name of Burrud was the most daring, were active in taking interesting pictures of the battles and of other events. Villa and the Mexicans soon began to look on the photographers with suspicion, and, as the success of the work depended largely on gaining the good will and the support of the revolutionary leader and his followers, Burrud decided to make a "grand-stand play" to win their respect. How well he succeeded is told by Mr. Francis A. Collins in The Camera Man:

It was the season of the bullfights, when the toradors were the heroes of the day. The photographer obtained permission from the authorities to enter the bull ring, and one fine day, when thousands of Mexicans had gathered to enjoy their favorite pastime, he loaded his camera, swung it from a strap over his shoulder and calmly jumped over the barrier.

The audacity of the feat won the Mexicans at once. To face the dangers of the ring is sufficiently perilous for the trained bullfighter, and the photographer was handicapped by a heavy camera. Moreover, the torador may dance back and forth before the infuriated bull and then jump nimbly aside, but the "movie" man had to get within short range of the animal and stand his ground long enough to grind out several yards of film. Burrud remained in the ring long enough to take several hundred feet of film, and yet managed to escape with his life and his camera.

Once the bull, which seemed to object to posing for his picture, singled out the photographer from among the toradors and charged Burrud so fiercely that he was obliged to run for his life. As he vaulted the barrier at the side of the ring he actually felt the animal's hot breath on his neck.

The feat caught the fancy of the Mexicans, and

they gave the "camera man" an ovation. Villa, who always attends such functions, was so delighted that he gave an elaborate dinner the same evening in honor of the daring Burrud.

A TALE OF TWO FACES

"There we stood, the tiger and myself, in the thick of the jungle, face to face!"

"O major, how perfectly frightful it must have been for both of you!"

—The Passing Show.

MR. PEASLEE ON THE SIN OF ENVY

"I VUM!" exclaimed Caleb Peaslee, half to himself, "a pusson would almost think Enoch Bates had moved in somewhere along on this stretch of road, and had got a grudge agin somebody, from the thank-ye-ma'ams there is here!"

The wagon jolted perilously and the summer boarder had to hold her hat with one hand, but she found breath to ask questions.

"Who was this Enoch Bates? Some local celebrity?"

"He wa'n't reelly what you could call celebrated, 's I know of," Caleb said thoughtfully, "and yit he was some noted hereabouts for certain things."

"Just what form did his notoriety take?" persisted the boarder.

"Well," said Caleb judicially, "for one thing, he was about the snuggest man that you most ever saw, in a money way. He raised a lot of stuff on his farm and sold everything he could git a cent for, and lived off'n the leavin's. I don't s'pose he et ten apples a year, though he was fond of 'em. He sold 'em all and put the money away. And as for eggs, I presume likely he'd forgot even what they tasted like, for eggs are 'bout the same as money here. Enoch used to keep a big flock of hens; and then he used to buy up eggs and ship 'em, a couple of hundred dozen at a clip, sometimes.

"To show you how he valued an egg: He had a boy workin' for him one time, and he sent the boy to the henhouse to gether the eggs, and he was gone a speck longer'n Enoch thought needful. It happened that there was more eggs than the boy could get into the basket, so he put a couple into his pocket. When he got back to the house, Enoch took him to 'bout bein' gone too long—took holt of him and give him a shakin', 's I remember it, and in doin' that he made out to break one of the eggs in the boy's pocket.

"When he found out what had happened it maddened him so that he started in to give the boy a reg'lar lickin', and so doin' he busted the other egg, and that set him putty nigh demented. He finished by givin' the boy a good trouncin', and sent him back to the poorhouse, where he got him.

"'Nother thing 'bout Enoch was that he had a jealous disposition—mean and envious, you know. It took a number of shapes, but the only one that matters in this case is about Johnny Doan's hoss. He had a nice-steppin' little drivin' hoss, and he liked to shove her right along—nothin' to hurt her, for the hoss liked to go as well as Johnny liked to have her. But it thorned Enoch to see Johnny kite past his place goin' so smooth, and he havin' nothin' but a wind-broken old animal that could scarcely get out of his own way.

"There was a wet place in the road 'twixt Enoch's place and Johnny's, and the s'lectmen hired Enoch to fix it. While he was workin' on it he got a mean idea, and went and made some of them thank-ye-ma'am jounces, like them we've jest come over, right crossways of the road.

"He said he done it to turn the water out into the ditch; but everyone knew well 'nough that he done it so Johnny couldn't speed past 'thout bein' in danger of lamin' his hoss or springin' an ex, or somethin' like that.

"Well, one mornin' a day or so after he'd got the road all fixed for Johnny, Enoch was loadin' up his wagon with eggs to take 'em to the station. He had the hoss hitched in and was jest goin' to put the last case of eggs into the back of the wagon when the boy that he'd trounced and sent away went by the house. What possessed Enoch, I don't know, but I s'pose he was only tryin' to scare the boy. Be that as it may, he grabbed his hosswhip and started towards him, yellin' and switchin' the whip, and he made such a touse that the old hoss started and run away with that load of eggs in the wagon and the tailboard down—a hundud dollars' worth of eggs if there was a cent's worth!

"Well, Enoch was makin' so much racket himself that the hoss got a good start 'fore he realized it, and then it was too late to ketch him, and down the road the hoss went, straight for that jouncy strip that Enoch had made to ketch Johnny.

"Well," continued Mr. Peaslee with grim enjoyment, "I d'know as there's much more to add to it. When the hoss struck them jounces the eggs begun to go into the air, a whole case at a time—and when a case of eggs goes out of the tail of a wagon and lights on the frozen ground, it makes quite a mess. Yes'm, quite a mess!

"And for that reason," concluded Mr. Peaslee, "them hummocks in the road are known round here as 'Enoch Bates's jounces' to this very day."

MANY INVENTIONS

IT is a curious fact about inventors that their genius is almost invariably a tireless bent toward experiment and contrivance in every direction; not often is it directed by a truly scientific devotion to one field of study. From Prof. F. W. Taussig's Inventors and Money Makers we take this interesting bit in proof of that assertion.

Cartwright is chiefly famous for inventing the power loom and Watt for inventing the steam engine; but their ingenious minds busied themselves on every sort of mechanical and physical problem. Cartwright never ceased inventing. When he settled down in London he set himself to the

systematic pursuit of scientific discovery. His little house in Marylebone Fields became a very treasure house of arts and sciences. He made bread in his own kitchen by machinery; published a scheme for rendering houses fireproof; invented bricks on a geometrical system; made a machine for biscuit baking; helped Fulton with his first steamship models; brought chemistry to bear upon the science of agriculture; introduced a new three-furrow plough; won the Agricultural Board's gold medal for experiments in fertilizer, and their silver medal for an essay on the culture of potatoes; and obtained patents for calendering linens, making ropes and cutting velvet pile.

Indeed, it may be said of Cartwright that he went to his grave inventing. In his eightieth year, when he was sent to Dover for the warm sea bathing, he invented a method by which the bath man saved the labor of two men in pumping up the water. A few weeks later he designed the model of a new centaur carriage, as he styled it; and a day or two before his death he wrote a long argument to a friend explaining a plan he had for working the steam engine by gunpowder instead of by steam.

Watt, likewise, was interested in many inventions and devices. Among them may be mentioned a new kind of clock, which, to quote Watt's own language, "is to be ranked in mechanics as riddles and rebuses are ranked in poetry"; a micrometer; a drawing machine, which he himself termed "a gimcrack"; a copying machine for letters, prototype of the copying devices so long in use; a machine for drying linen and muslin by steam; a method of getting illuminating gas from coal; a new kind of oil lamp; and a smoke-consuming device, on the down-draft principle.

Last, but not least significant, was a machine for reproducing sculpture, which he himself termed a "hobbyhorse," and which seems to have amused and indeed absorbed him for the last twenty years of his life. Long after Watt became prosperous and honored, he spent much time in his garret experimenting with this pet of his old age.

TWO LINCOLN STORIES

SOME of the characteristic traits that endear the memory of Lincoln to the American people are revealed in the recollections of Mr. A. J. Dittenhoefer, the author of How We Elected Lincoln. Two of the anecdotes show the martyred President's great sympathy for persons in trouble.

One day a visitor who was walking along a shaded path from the Executive Mansion to the War Office saw the tall form of the President seated on the grass. He afterwards learned that a wounded soldier, on his way to the White House, had met the President and had asked his assistance. Whereupon Mr. Lincoln sat down, looked over the soldier's papers, and advised him what to do. He ended by giving him a note directing him to the proper place to secure attention.

On another day, when Lincoln was driving up to the hospital, he saw one of the patients walking directly in the path of his team. The horses were checked none too soon, and Mr. Lincoln saw that the obstructor of the road was a boy soldier who had been wounded in both eyes. The President got out of his carriage and asked the poor fellow his name, his residence and his service.

"I am Abraham Lincoln," he said upon leaving, and the sightless face lighted at the President's words of sympathy.

The following day, the chief of the hospital delivered to the boy a commission in the army of the United States as first lieutenant. The papers bore the President's signature, and were accompanied by an order retiring the young soldier on three-quarters pay for the years of helplessness that lay before him.

"Some of my generals complain that I impair discipline in the army by my pardons and respites," Lincoln once said. "But it rests me, after a hard day's work, if I can find some excuse for saving a man's life, and I go to bed happy as I think how joyous the signing of my name will make him and his family and friends."

TOO MUCH NATURAL HISTORY

IN a detachment of Confederate soldiers captured near Warrenton, Virginia, several prisoners, by a freakish coincidence, bore names that resembled those of animals. The sergeant at the desk, a testy, fussy fellow, eyed them crossly.

"Your name!" he snapped to the first.

"Fox."

"Next!"

"Bhaer," was the reply.

The sergeant sniffed and glanced at the third.

"Wolfe," said the soldier, and his interrogator gave him a sharp look.

"Next!" he shouted; and he turned a dark red when the stolid answer came, "Campbell."

The sergeant knew well enough that they were not tricking him, for those were not the days of tricks, and the tired faces were impassive.

"And what do you call yourself?" he asked another tall Johnny in ragged gray.

"Lyon," the fellow responded sadly, whereat the officer threw down his pen and shouted with good-natured laughter.

"Go order some cages built!" he roared to a private. "We've got to shut up a whole blamed menagerie in the camp!"

PROBABLY "STUFFED"

A MAN and a woman entered a café. "Do you want oysters, Louise?" asked the man as he glanced over the bill of fare.

"Yes, George," answered the woman, who, says the Sunday Magazine, was vainly trying to touch her toes to the floor, "and I want a hassock, too." George nodded, and as he handed the waiter his written order, he said, "Bring a hassock for the lady."

"Yes, sir," answered the waiter, "one hassock." A moment later the waiter, apparently puzzled, approached the man and, leaning over him, said:

"Excuse me, sir, but I have only been here two days and do not want to make any mistakes. Will the lady have the hassock broiled or fried?"

Answers to Puzzles in Last Number

1. Rangeley.
2. Bridges.
3. United States. Afghanistan. Argentina.
4. Climate.
5. Segregate, emanate, inculcate, late, prate, prelate, imprecate.

THE CHILDREN'S PAGE

LILAC AND ROBIN

BY MARY LEE DALTON

There was a lilac blossom
That nodded by the way
And added to the fragrance
That flooded all the May.

There was a little robin.
High in a maple tree.
That welcomed in the morning
With rippling notes of glee.

Oh, they were very friendly.
The blossom and the bird;
One day I paused and listened.
And this is what I heard:

"Dear lilac," quoth the robin,
"Pray, will you tell to me
The reason you are smiling
So very happily?"

And thus the lilac answered:
"Dear robin, there befell
A wondrous thing this morning.
As I will gladly tell.

"I heard a woman saying.
As she passed on her way.
That she will gather lilacs
Upon Memorial Day.

"She meant that in the tribute
That loving hands will bear
To brave and loyal soldiers
The lilac blooms will share.

"My petals are a-quiver
With happiness and pride;
Could kinder fate befall me,
Or any flower beside?"

"Dear lilac," sang the robin,
"Upon Memorial Day.
When they shall come to pluck you
And bear you far away.

"My part shall be to follow
Wherever you may go.
And sing, where they may place you,
The sweetest song I know."

And so, where they are sleeping
Who fought to right a wrong
We see the fragrant lilac.
We hear the robin's song.

MANDY'S MEMORIAL DAY

BY JOHN CLAIR MINOT

MANDY'S mother took in washing and was as busy on Memorial Day as on other days; but for Mandy herself, after she had wiped and put away the breakfast dishes and carefully swept the kitchen of the little cabin where she and her mother lived, the day was her own to do with as she wished. There was no school, and her mother would not need her until night. So she tied her brightest ribbons to the ends of her kinky little braids and set off down the street to seek adventures.

Mandy often did errands for her mother, and she felt quite at home in any part of the city. She knew that on a holiday like this there would be many wonderful things to enjoy. Certainly there would be bands playing somewhere and men marching, and nothing could be finer than that. In a little while she had left behind the dingy part of the city where she lived, and found herself on a broad avenue that bordered a beautiful park. There the sidewalks were more crowded, and everyone seemed to be waiting for something. Mandy squirmed her way through the crowd until she reached the curbing, and there, in the very front row, she, too, waited.

She did not have to wait long. In a little while she heard music in the distance. It was the band that she had hoped for. It came nearer and nearer, but it was playing a solemn piece in very slow measure, instead of the lively airs that she liked. In front of the band big policemen marched, and other men rode on horseback, and behind the band came a long line of soldiers. How she loved the uniforms and all the bright buttons and buckles and rifle barrels that flashed in the sunlight—and the flags that waved over the ranks!

When the flags went by, the men and the boys near Mandy took off their hats. Mandy wore no hat, or she would have felt like doing the same; but her bright eyes grew brighter, and she stood very straight and saluted the flag with her hand, just as her teacher had taught the class to do during the flag exercises at school.

Next after the soldiers came a long line of automobiles. The first of them were filled with flowers, some in baskets and some fashioned into clusters and wreaths. Old men rode in the automobiles that followed—bent and gray-haired men in blue suits, with little ribbons and bronze badges on their breasts, and with wide-brimmed black hats on their heads. As they rode slowly past, the people on the sidewalks clapped their hands, and Mandy clapped hers as loud as she could.

Just then the band ceased playing and the procession stopped. Two of the old men stepped from one of the automobiles near Mandy. One of them bore a wreath and the other a cluster of roses. They crossed the avenue and went into the park, and there they placed the

MANDY PLACED HER DAISY WREATH BESIDE THE BEAUTIFUL ROSES

flowers on the base of a memorial to Abraham Lincoln. They stood there a moment with their hats in their hands and then walked slowly back through the crowd to their automobile. A young man on horseback, waiting near by, dashed down the avenue. A moment later the band began to play again and the procession moved on.

The crowd thinned out. Some followed the procession, some went in other directions. Mandy heard a man say that the procession was going to the Soldiers' Monument in Union Square and then to the cemetery at Holly Hill. That was a long way off, and the band was already so far down the avenue that Mandy could hear it only faintly. The park, with its trees and flowers and its broad stretches of green grass, looked very inviting, and she decided to stay there and play a while.

When she passed the Lincoln memorial she could not resist climbing upon the broad step at its base and smelling of the beautiful roses that the old men in blue suits had placed there. Suddenly an idea came to her. She would make a wreath of her own. Surely she ought to have some part in the Memorial Day that the teacher had told the class about only the day before.

In a few moments more she was busy, making a wreath of the daisies that dotted the green slope beyond the Lincoln memorial. Other children were playing near by; but Mandy was used to playing alone, so she kept at her task when curiosity drew them to watch her. It was not easy to make a wreath of daisies and grass, even with the help of a twig that she broke from a bush, and Mandy wished very hard that she could use some of the flowers that grew in a bed beside the path; but she knew that she must not touch them. There was a sign that said so, right in the middle of the bed, but the daisies were free to anyone.

After a long time Mandy finished her wreath and carried it over to the monument. Then, just as she placed it beside the beautiful roses, something happened.

"Hello, Snowball!" called a heavy voice behind her. "What are you doing here?"

Mandy jumped so suddenly that she almost snapped the bright ribbons from the kinky braids. "My name's Mandy," she said, "and I've made a wreath for Mr. Lincoln."

"Oh, I see!" said the man, and he smiled in such a friendly fashion that Mandy was not a bit afraid. There was another man with him. Both of them were old men with white hair. On the breasts of their blue suits there were little ribbons and bronze badges, and

they wore wide-brimmed black hats. Mandy knew in an instant that they were the two men who had placed the wreath and the roses there two or three hours before.

"And what do you know about Lincoln?" went on the man, still smiling down at Mandy.

"Oh, I know a lot about him!" answered Mandy promptly, with eyes shining. "He was a good man, and he saved the country in the great war, and he loved the colored people and —"

"Yes, yes, sure enough," said the man. "Lincoln was a good man and a great man, and he did indeed save the nation, and he loved all people, North and South, black and white. I don't know of any place where it is more fitting for us to put flowers on Memorial Day than on a memorial to Abraham Lincoln."

And then the other man spoke for the first time. "Somehow I feel," he said, "that Mandy's little daisy wreath is more beautiful than the roses that we left here."

The two men looked hard at each other and nodded. Then they both patted Mandy's head and walked slowly back to the automobile that had been waiting for them.

Mandy watched them ride away, and then she started for her home in the dingy little alley. It was well past noon and she was hungry. As she hurried along the street she thought over what the men had said—the old men who had been soldiers in the war long, long ago, when Abraham Lincoln had saved the nation, and her heart thrilled with a proud feeling that she had really had a part in their Memorial Day, and that their Memorial Day was her Memorial Day.

THE TWO TOWNS

BY RALPH M. JONES

"Pray can you tell me, little maid,
The way to Grumble-town?"
And first she pointed up the road,
And then she pointed down.

She pointed up and pointed down—
Then shook her pretty head:
"I've never been to Grumble-town,"
The little maiden said.

"Then maybe you can show me, child,
The Town of Pleasantville?"
"Oh, yes, indeed," she said, and smiled:
"It's just beyond the hill."

"Good sir, it's just beyond the hill;
And if you'll come with me,
I'll take you into Pleasantville:
That's where I live," said she.

HALF PAST EIGHT

BY JOHNSON MORTON

Half past eight's the meanest time!
When I'm seated in my chair,
And I see my breakfast there.
Then that little clock will chime!
Up looks father o'er his plate:
"Hurry, son, or you'll be late:
It's half past eight."

After school, though, I do things—
Fly my kite or play baseball—
Till I hear our Hannah call
When the supper bell she rings.
After tea they light the grate.
And I read there while I wait
For half past eight.

Seems to me I haven't read
Half a page, when I hear pa
Put his paper down, and—"Ma,
It's time for John to go to bed!"
So I have to yield to fate.
If there's any time I hate,
It's half past eight!

"I WISH I WERE"

BY CLARA INGRAM JUDSON

ONE summer morning a fairy awoke so late that the dew was all gone from the flowers and he had to run down to the brook to get his before-breakfast drink. And after he had had his drink he discovered that he was too late for honey, too; he could not find a speck of honey, not even one taste. You see, the fairies usually get up so early that they can eat all the honey they want long before the bees start from their hives.

But on this particular morning the lazy little fairy had slept so late that the bees had been round and eaten all the honey, —every scrap,—and that made the fairy so cross that he did not even remember that he might stir round and hunt for something else to eat.

He sat down at the foot of a tree, intending to sulk all day long; but before he had more than started sulking a robin came by.

"Good morning, Friend Fairy!" said the robin cheerfully. "Isn't this a fine day?"

"No, it's a very bad day," said the fairy crossly, "and I wish I were an apple!"

"What a funny wish for a fairy to make," said the robin, laughing. "If you change into an apple, I'll eat a hole in you."

"Then I won't be an apple," replied the fairy crossly, "for I don't want a hole eaten in me! I'll be something else."

The robin laughed and flew away just as a big toad hopped out from behind a tree.

"Good morning, Friend Fairy!" he croaked.

"Isn't this a fine day?"

"No, it isn't," said the fairy crossly; "and I wish I were a spider!"

"What a funny wish!" croaked the toad. "Don't you know that spiders have to work very hard and spin a web before they can crawl on it through the air? But I hope you do change into a spider; I'm looking for spiders this very minute, and if you become one I'll gobble you up!"

"Then I won't be a spider," said the fairy, "for I certainly don't care to be gobbled up. I'll be something else."

The toad laughed and hopped away, and the fairy was left alone to sulk.

"I don't know what I want to be," he sighed fretfully. "This is such a horrid world—no dew, no honey, no nice wishes! I think I'll be a star."

"A star?" exclaimed a soft little voice by his side. "Would you be a star and leave this beautiful world—all the flowers and birds—to live up in the bare sky?"

The fairy turned and looked. There, near by, was a tiny ant tugging away at a big grain of sand.

"Do you think this is such a fine world?" asked the fairy. "I should think you would hate it. You have to work all the time."

"To be sure I do," replied the ant proudly. "That's the reason I like to live. Working is the jolliest and most interesting thing in this whole big world—didn't you know that? It's true." And the sturdy little ant picked up his burden and started away.

Left by himself, the sulking fairy began to feel very foolish and very sorry. He remembered the flower bud he ought to have opened long ago; and he thought of the sunbeams he should have helped.

"What I should be wishing for," he whispered to himself, "is work. And then I should hunt round and answer my own wish."

Slyly he slipped round the tree to open a buttercup bud he was sure he had seen there. And as the flower opened, what do you suppose that surprised fairy found? A drop of fresh, sweet honey all ready for him to eat!

As he sipped the honey and planned what to do next, a cardinal bird hopped by.

"Good cheer! Good cheer, Friend Fairy!" called the cardinal. "Isn't this a fine day?"

And the happy little fairy called back, "A fine day for working, indeed it is!"

The Simplest Way to End a Corn

DECIDE now to master your corn forever. Let today's corn be the last. Blue-jay will free you from the most painful corn. Apply one of these soothing plasters tonight. Pain ends. In 48 hours the corn disappears. Only Blue-jay gives this insurance. Paring is temporary. Harsh liquids are dangerous. Millions of corns are ended the Blue-jay way. Most corns require but one application. An occasional stubborn one, two or three. Try the gentle, simple Blue-jay way tonight. You will never be the victim of corns again.

BAUER & BLACK

A WATER CURE

DOWN by the bathhouses on the marsh two bulldogs sat waiting in the morning sunshine for their masters to come out for a swim in the overflowing creek that swirled along between green banks of waving grasses. The dogs were on opposite sides of the bathhouses, so intently watching the swallows flying over and suddenly swooping down among the grasses that they had not discovered each other's presence. If they had, there surely would have been trouble, for they were not well enough acquainted to be at all friendly, and there was no doubt that the white dog was quarrelsome.

The brindle, Rastus, had never been down on the marsh before, for ever since his arrival at the Sea Rivers Club a week before, his master, John, had been very careful to leave him shut up in the cottage whenever the white dog's master asked him to go swimming with the other boys. But this morning the white one, Mike by name, had gone off early to the station with his master, Avery, and when the boys invited John to go down with them for a swim, there seemed to be no reason why Rastus should not have a swim, too.

But Avery came back sooner than the boys had expected, and, not knowing that Rastus was down by the creek, he hurried along with Mike at his heels, to have his bath with the others.

John got ready first and came out. He did not notice the white dog lying on Avery's sweater. He threw a stick far out on the marsh for the brindle to fetch. But Mike saw the stick hurled through the air, and he, too, set off to fetch it. Both dogs reached the spot where the stick fell at the same moment; but instead of trying to get it, they forgot the stick, and each caught the other by the jaw in true bulldog fashion.

John was frightened, for Avery had told him what a ferocious fighter the white dog was. He called to the boys in the bathhouses. They all came running and shouted to the dogs, some trying to call them back, some trying to urge them on.

But Avery had no desire for a fight between the two dogs. He did not care to try to pull them apart, and he knew that he could not make Mike let go merely by telling him to do so. John had never seen Rastus fight, and he did not want to have Mike get the better of him, as he was sure would be the case if all that Avery had told of his prowess were true. But he was sure that Rastus would never let go until he was beaten. What could be done?

Avery had an idea. He took John by the arm and told him what was to be done as they ran along to where the dogs were growling and grimly holding to each other's jaws, near the creek. Before the dogs had time to understand what was happening, each boy seized his own dog by the collar with one hand and by the tail with the other and swung them, tightly locked together, splash! into the middle of the creek.

That was the end of the battle. The dogs let go and swam ashore. Neither looked at the other. Mike, at Avery's stern command, started dripping wet toward home; and Rastus, after shaking himself vigorously, shiveringly obeyed his master when he motioned for him to lie down on the boat landing.

During the rest of the summer the two bulldogs showed no signs of ever seeing each other. Although they lived side by side, no one ever heard so much as a growl from either of them. Their masters no longer tried to keep them apart, and both dogs went wherever the boys went. They seemed to have agreed to have no dealings with each other after their first and only fight.

THE DUTIES OF MENELIK

WHEN Menelik II of Abyssinia died in December, 1913, he was succeeded by his seventeen-year-old grandson, Lij Yasu, the monarch whose party the "new government" has displaced. The boy ruler faced an almost impossible task, for his wily grandparent was an exceptional man of remarkable energy. In Wildest Africa Mr. A. Henry Savage Landor gives a striking picture of the multiplicity of details that the old sovereign was accustomed to handle.

Everything in Adis Ababa was referred to the emperor. While attending to most important political affairs, his servants would bring matters of the most trivial character to him for settlement. The following is an example of what happened every minute of the day at the palace: Menelik, with his head bandaged in a white sash and with a cheap French felt hat far back upon his skull, is pondering with some minister over a political problem of great importance—let us say, the projected railway between the sea and Adis Ababa. The emperor is deeply absorbed in thought.

Suddenly a servant enters and whispers in the emperor's ear, regardless of the presence of the foreign representative of a great European country, "Your Majesty, the carpenter wants some more nails to mend the veranda."

"Here are the keys. Give him twenty nails," says the emperor. "If he needs more, come again to tell me."

The emperor is again deep in thought, when in comes intruder number two and whispers that a mule has escaped from the palace.

The emperor jumps down from his throne, a high packing case covered with Oriental carpets, slips quickly into the shoes that he has discarded and, hastening to his telescope, scans the country all round with it, in order to see whether he can detect the missing animal upon the hills near Adis Ababa. The escaped mule is much more important to the emperor than all the railways in the world.

The foreign representative vainly attempts to drive the emperor again to his throne, while the emperor on his side endeavors to induce the minister to come and look for the mule.

THE ADMONITION OF A FRIEND

ONE of the most delightful stories from the British trenches, writes an Associated Press correspondent in the New York Sun, has been illustrated and distributed among the troops for their amusement. One night an old sergeant was "doing a bit of snooping" in no man's land, between the trenches, when a recruit sentry spied him and called out:

"Halt! Who goes there?"

"Shut your bloomin' mouth, or I'll come over and knock your bally head off!" replied the exasperated veteran.

"Pass, friend," said the sentry promptly.

LONG-LIFE
Kokomo
BICYCLE TIRES

A 220-pound man rode one pair of Kokomo Bicycle Tires day after day—for 18 months—and then reported that he was "still going." More than a year and a half of solid service!

If a pair of Kokomos will do that for a 220-pound man, it's pretty sure that they are the kind that you can depend on. And it is a fact, that Kokomo Bicycle Tires have the habit of lasting long enough—and then some—under all reasonable conditions.

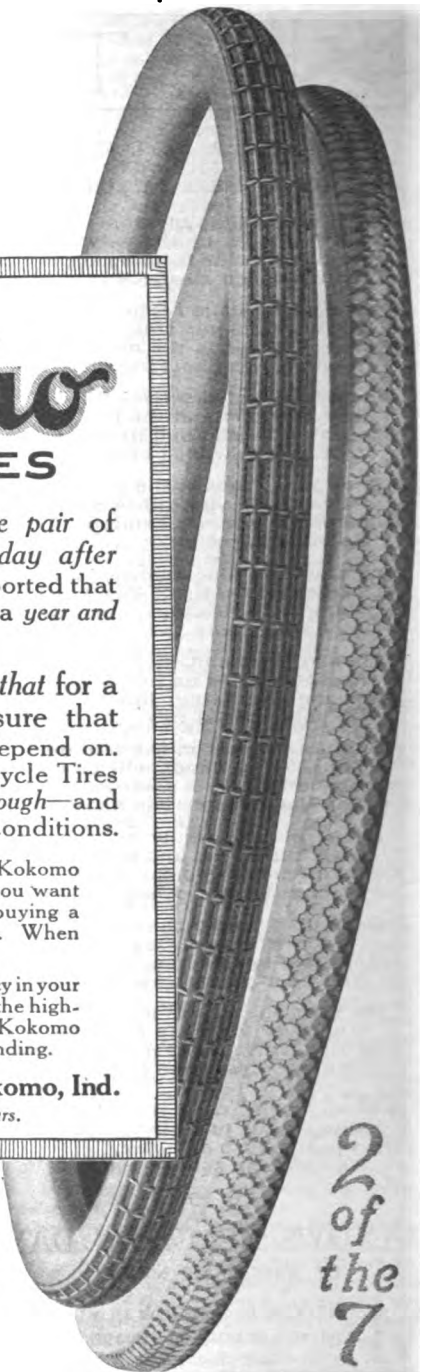

There are seven different tires in the Kokomo line. You can get almost anything you want in treads, colors, or prices. When buying a bicycle, see that it has Kokomo Tires. When buying tires, ask for Kokomo.

The dealer who has the Kokomo Agency in your community is a dealer who believes in the highest grade goods. That is why he sells Kokomo Tires. Such a dealer is well worth finding.

Government Issues Warning Against Fly Poisons

Following is an extract from "The Transmission of Disease by Flies," Supplement No. 29 to the Public Health Reports, April, 1916.

"Of other fly poisons mentioned, mention should be made, merely for a purpose of condemnation, of those composed of arsenic. Fatal cases of poisoning of children through the use of such compounds are far too frequent, and owing to the resemblance of arsenical poisoning to summer diarrhea and cholera infantum, it is believed that the cases reported do not, by any means, comprise the total. Arsenical fly-deströying devices must be rated as extremely dangerous, and should never be used, even if other measures are not at hand."

106 fly poisoning cases have been reported by the press within the last three years. As stated above this number is but a fraction of the real number. Protect your children by using the safe, efficient, non-poisonous fly catcher.

NATURE & SCIENCE

ZONES OF SILENCE.—Many times during the present war observers have noticed the fact that, because of the eccentric action of sound waves, cannon fire that is audible at great distances is sometimes inaudible at much shorter distances. The phenomenon was described in this column November 23, 1916. A correspondent of Current History describes two occasions when the same acoustic effect occurred during the Civil War. In the action between the Merrimac and the Congress at the mouth of the James River, March 8, 1862, the sound of the guns could not be heard at a distance of three and one half miles over water, yet persons one hundred and fifty miles away heard it plainly. On June 27, 1862, occurred the "silent battle" of Gaines's Mill. Gen. Law, of Lee's army, writing of it in the Southern Bivouac for May, 1887, has this to say: "To the troops stationed near the river, on the Richmond side, the action at Gaines's Mill was plainly visible—that part of it, at least, which took place on open ground. I have been told by an eyewitness that from Price's house on the opposite side he could distinctly see the Confederate lines advancing to the attack through the open ground beyond the Chickahominy Swamp, and could distinguish the direction of the battle by the volume of smoke rising from the woods farther toward the Confederate centre and left. But it was all like a pantomime; not a sound was heard, neither the tremendous roar of musketry nor even the reports of artillery. For nearly two hours, from five to seven o'clock on a clear midsummer afternoon, fifty thousand men with at least one hundred pieces of field artillery fought under these conditions." Mr. Tyndall experimented in acoustics in the English Channel, off Dover, in 1873-4, and came to the conclusion that on clear days the air may be composed of differently heated masses, saturated in varying degrees with aqueous vapors, and that that condition produces a deadening effect in the atmosphere.

LOCOMOTIVES BY FREIGHT.—Three big electric locomotives, sent from Erie, Pennsylvania, to South America, where they will be used to transport ore from the Chilean iron mines, were recently prepared for their long voyage in an unusual way. Each locomotive was taken apart and packed in sixty-two cases of such size and shape that they could be handled by ordinary ship and dock cranes, which can seldom lift loads of more than forty tons. Since each of the locomotives weighs one hundred and twenty tons, it was impossible to load them on shipboard fully assembled. All the various parts were therefore marked so that each locomotive could be quickly and easily reassembled after it reached South America. When completely prepared for the preliminary

part of the journey, by rail, the locomotives occupied eight cars, including three box cars for the smaller cases and five flat cars for the heavier cases and unboxed parts. When the cars reached the Harlem River the cases were transferred to one of the harbor lighters and taken to the Brooklyn pier for shipment on South American freighters. At the Cruz Grande mines, in Chile, the locomotives will operate on one of the most unusual ore-carrying railways in the world. Although the mines are only four miles inland, they are twenty-two hundred feet above the sea, and the railway winds in and out for a total distance of fifteen miles, in order to keep the grade within reasonable limits. Each locomotive will haul from twelve to twenty fifty-ton ore cars from the mines to the coast, where the ore will be shipped to the United States to be made into steel.

SCIENCE AND THE WAR.—M. Paul Painlevé, a member of the French Institute, does not agree with the reported remark of Mr. Thomas A. Edison that science is playing a rather small part in the war. In Current History M. Painlevé gives the following list of several important adaptations of scientific discoveries now in common use: The processes of wireless communication and for registering sounds at distances—that is, by the ordinary wireless currents and by ground induction—have been marvelously perfected. All the armies are rivaling one another in skillful methods for tapping the enemy's lines of telephonic communication from a considerable distance; not tapping as it is generally understood, but by the use of a marvelous instrument that enables the sentinel in his advanced listening post out beyond the front line of trenches to hear the enemy communications by telephone going over wires that are several hundred yards away. I would mention also a system that we perfected and put into use for locating the enemy's batteries by sound. The principle was known before the war, but it was regarded as impracticable. It has, since the war, been brought to the highest state of perfection and efficiency, and for months has been in use over the entire front. It has proved so effective that our adversaries, who captured a motor car with one of the outfits, have equipped themselves with appliances that are similar but that lack the delicacy and the precision of our instruments. Inventions for following the enemy's sapping and mining operations by sound that in all armies were very crude and insufficient before the war have made the most remarkable progress, and will reflect honor upon French science later on. Aviation in every respect has been remarkably perfected by the efforts of science and technicians since the war began. To-day a pilot goes up in all kinds of weather without fear of being upset by sudden squalls, so well have the measures been perfected for the stability of flying machines. Great progress also has been made in the improvement of motors, particularly in the reduction of their weight in proportion to their effective power, so that they speed up to one hundred and fifty miles an hour. Finally, in spite of the difficulties, and they were many and great, wireless telegraphy has been marvelously adapted to aviation.

No Other Car So Complete

One Mitchell distinction lies in the fact that every wanted feature is in it.

There are 31 features which most cars omit. There are more dainty touches—more luxuries and beauties—than in any other car in this class. We have added 24 per cent to the luxury cost this year.

There are all the attractions which our experts found in 257 new models. All combined in a single car. You will see here everything we know to make a car more appealing.

Doubled Endurance

In addition to that, in the past three years we have doubled our margins of safety. Every vital part now has 100 per cent over-strength.

The result, we believe, is a lifetime car. Two of these cars that we know of have already run over 200,000 miles each—about 40 years of ordinary service.

In the past two years, dozens of famous engineers have bought Mitchells for their personal use, because of this extra strength. Your dealer will show you a list of them.

Two Sizes—8 Styles

There are now two sizes of the Mitchell Six, two basic prices, and eight exclusive bodies.

You will find a hundred surprises in them. You will see the result of wondrous factory efficiency, due to John W. Bate. For all of these extras are paid for by savings which he has worked out in this plant.

Go see them. When you buy a fine car and a car to keep, you will want a Bate-built Mitchell. It will spoil your taste for a car less handsome, less enduring, less complete.

The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

THE PHYSICIAN'S PRESCRIPTION

THE prescription is an order on the pharmacist for a certain drug, or a number of drugs, in definite amount, and put up in a definite form, to be given to the designated patient, and to be taken by him in certain specified quantities at specified times. It is similar to the receipt of the cookbook, but is more binding on the druggist than are the directions in the cookbook on the cook, for carelessness on the part of the cook may merely spoil the dish, but if the pharmacist fails to follow explicit directions in preparing the prescription he may cause serious trouble—even death, if his error leads to the patient's taking an overdose of a poisonous drug.

Formerly great attention was paid to the form of the prescription; and if the writer was an educated physician, he would have been ashamed to make it out in any except the orthodox way. Today, however, doctors are much less punctilious in that respect; it is not uncommon for a physician to depart so far from the usual form and to use so many abbreviations that the druggist actually cannot decipher the prescription and has to call him on the telephone to discover what he means to prescribe.

The properly made prescription begins with the sign *Rx*, which is believed originally to have represented the Egyptian god Horus or the Latin god Jupiter, the first of whom was the god of mystery, the second the dispenser of all good gifts. The sign is now regarded, however, as an abbreviation of the Latin word *recipe*, meaning "take." Then follow the names of the drugs to be used, with the amounts, after which comes the letter *M*, or the word *Mix*, "mix," and directions as to the form of the compound, whether pill, powder or liquid, and finally directions regarding the dose and the times for taking the medicine.

It is still the custom in this country and in Great Britain to write the prescription in Latin—a relic of mediæval times, when Latin was the language of science as well as of the Church. The practice might well be abandoned; the only advantage it has is that it is sometimes a good plan to keep a patient in ignorance of the names and amounts of the drugs he is taking. But that is not a matter of great importance, and in these days, when the patient is likely to know as much Latin as the physician, even that advantage does not always exist.

TOLD AND RETOLD

NINA, just back from a meeting of the Girls' Sewing Circle, began abruptly: "I never knew that Caroline Chesney had an aunt who was an army nurse in the Civil War."

"Why, of course," said her mother. "Henrietta Chesney was your grandmother's most intimate friend, and went when she did; they served in the same hospital. They were absurdly untrained and inexperienced, but they were naturally capable, and the place was terribly short-handed, so—but grandmother must have told you all about it."

"Once," said Nina, "but somehow I don't remember the details, and I'd forgotten she had a chum. Caroline made it perfectly thrilling! Her sister's just been accepted as a nurse in an English war hospital, and the talk started with Carrie saying that sort of thing ran in the family; her Aunt Henrietta had begun it. The things she told got us first laughing, and then weepy; and then all of a sudden she announced it was my turn; I must know more hospital stories than she did, because she'd only had her Aunt Henrietta for a few visits, and grandmother had lived with us five years. And I couldn't think of a thing, and I was so ashamed! I seemed so stupid and unappreciative."

"To the girls or to yourself?" inquired her mother.

"Both! But to myself most," declared Nina. "I wonder why grandmother didn't talk to me more? Caroline said her aunt loved to 'reminisce' about war times; she would tell the same story over and over again."

"Caroline must have been dreadfully bored, poor girl!" remarked her mother dryly.

"Bored! With stories such as those? When the person telling them was a real, live, war-time heroine, who—why, mother!"

Mother made no answer, but a curious little smile played round her lips as her knitting needles clicked in the silence. Nina grew slowly red, and her eyes widened.

"Was grandmother afraid of boring me?" she demanded.

"Grandmother was unusually keen. Like most elderly people, she was apt to repeat herself; but she noticed in a minute if anyone's attention was wandering or forced. You say she told you her adventures once; if she had told them twice, are you sure you would have listened?"

"No," confessed Nina shamefacedly, "not with more than half an ear. I begin to remember that she started to once or twice, and checked herself; and I was glad to escape. Oh, what a featherbrained little idiot I must have been!"

"Not quite that; but it was a pity," said mother.

"If old people didn't tell old stories, and tell them over and over, and younger people listen to them, how would the history and traditions of our race have been preserved in the days before chronicles were written? They were learned and transmitted by hearing and rehearing, until they sank in deep and could not be forgotten. 'Old wives' tales' are less important now; but they may still be precious legacies."

"You were a good listener, if I wasn't," said Nina eagerly. "Will you tell me grandmother's stories, all that you remember? Beginning now—this minute?"

"I remember a great many," demurred her mother. "Are you quite sure they wouldn't bore you?"

"They would not! Before the Circle meets to finish up our bandages for this month's consignment, I'm going to have every one of those stories at my tongue's end, no matter how many times you have to tell them over and over! Begin, please—'Once upon a time!'"

"Once upon a time," began her mother obediently, "in 1861, when every American girl was busy, just as you are to-day, making bandages and comfort bags, only they were not to be sent across the ocean—"

A RUSSIAN MEMORY

LINCOLN'S birthday, recently passed, writes a Companion subscriber, brings back to me a memory of my boyhood days.

I was born and raised in Berdyansk, on the Sea of Azov. The serfs had recently been emancipated by the liberal Czar Alexander II, and the struggle going on in America for the freedom of the slaves was watched with intense interest by those who loved liberty. My father was one of these, and, although the censor was very strict, he received a great deal of information from the British consul, who was established in one of his houses. At that time, of course, the transatlantic cable had not been completed.

One Sunday morning, in May, 1865, father and I were sitting on the veranda of our house when we saw the British consul, Mr. Cumberbatch, running across from his house, waving a paper and shouting to us:

"Mr. Lincoln has been shot!"

It proved to be a copy of the Illustrated London News, which he had just received, bringing the first news of the assassination of the martyred President, with pictures of the tragedy. Father had always been an intense lover of liberty and an ardent admirer of Abraham Lincoln. The consul read us the sad story, and never shall I forget the expression of pain and agony that spread over my father's features. As he grasped the paper he broke down completely and wept like a child, his love for Lincoln had been so great.

Eight years later my father was exiled from Russia on account of his opposition to militarism, and we came to America, where we finally settled in the state the capital of which is named after the greatest American. Can you wonder that we became true and loyal Americans?

THE GRAND DUKE AND BUFFALO BILL

IN the early seventies, when Buffalo Bill was in his glory as a hunter and scout, writes a contributor to the Westminster Gazette, I was ranching out on the great plains in Colorado, and often heard men talk of him.

The Grand Duke Alexis paid us a flying visit about that time, accompanied by a train of Russian grandees, and the United States authorities, who were anxious to entertain them properly, arranged to have them go on a great buffalo hunt and very sensibly put Bill Cody in charge.

Alexis rode Cody's own favorite buffalo horse, and, skilled hunter that he was, Bill did not take very long to find the party plenty of buffaloes to chase. Naturally, there was a troop of United States cavalry to protect the important visitors from the Indians, for the Sioux, Arapahoes and Cheyennes were hostile just then, and naturally eager to take the scalp of any unlucky white man they could corral.

While the hunt was in full swing a cavalry sergeant came riding up to Bill and called out:

"Say, cap (he was not a colonel yet), one of them kings of yours has fell off his horse three times, and we're afraid he might hurt himself. What are we going to do about it?"

"Oh," replied Cody, offhand, "jes' tie his crown on under his chin with a chin strap and tie him into his saddle, and he'll do."

BRAVE BOY BEN

BOISTEROUS Beatrice broke beautiful bric-a-brac; but Beatrice's brother Ben bought barrells.

Bracing breezes blew boats bearing Ben's bric-a-brac by Bensonhurst. But blizzards belated bold, brave Ben. Boylike, Ben blasphemously blamed blustering blasts, but blinked blindly.

Bang! boomed Bensonhurst bell buoy blocking Ben's bow. Bah! boldly bragged Ben. Boys' bravery borders bravado. Ben's brimming boat barely breasted big, brutal breakers. Ben's breast burned because bills become big. Behaving badly benefits beleaguered boys.

Bang! Breakers buried Ben's boat. Bygones better be bygones.

A SERIOUS SHORTAGE

SANDY, a Scotsman that the Windsor Magazine tells about, had returned to his native village after a visit to London. When some one asked him what he thought of the great city, he said:

"It is a grand place, but the folks there are not honest."

"How is that?" asked his friend.

"Well, I bought a box of pins labeled 'a thousand for a penny,' and coming home in the train I counted them, and I found they were seventeen short."

"HELPFUL HOUSEHOLD HINT"

IT would take more than common courage to follow a suggestion that appears in a certain English book of receipts: To make stockings wear well and keep their color—before wearing stand for ten minutes in boiling water colored with washing blue.

Personally, remarks Punch, we shall let our stockings take their chance.

The Gambler

The Motorist who does not stop to put on Weed Tire Chains before driving over wet-slippery-skiddy streets gambles with his life and the lives of others.

Some men would gamble with anything, from a counterfeit coin to life and property and all that they or others hold dear.

But at least they gamble for some stake which to them—if to no one else—seems worth the gamble. They do not risk their whole fortunes with only a few dollars to gain.

Why then, if time be precious, would they risk all the time allotted them here on earth, for the sake of a few moments of it now?

Yet, strange to say, this is just what some motorists do when they fail to stop to put on Tire Chains before driving over wet-slippery-skiddy streets. They gamble their automobiles, their limbs, their very lives, and the lives of others on the road—for no more than a little of their time to put on Weed Chains, the only dependable safeguard against skidding.

CHANDLER SIX \$1395

Chandler Power IS Power

CHANDLER power is power on the hills and mountain-sides; it is power in the mud and sand.

Four years of skilful and conscientious manufacturing effort have developed and refined the Chandler motor to a point approximating perfection. Chandler owners long ago named it The Marvelous Motor, and now, more than ever before, it is the wonder Six, powerful, flexible and enduring. On high gear and without

apparent labor it pulls the hard, steep grades and winding hill roads where other motors shift to second.

In crowded traffic it responds to every demand. On open roads it answers every call for speed. The Chandler motor is a fact-motor.

What any Chandler will do every Chandler can do.

The Chandler Company has never built a special demonstrating car.

The Chandler Company has never furnished to any Chandler dealer a special gear ratio.

Every Chandler is a demonstrator.

WITHIN THE CAR THERE WAS A HUSH OF AWE AND TERROR

HOUR after hour the train sped on across the level prairie. Not a hill broke the straight, unvarying line of the horizon. Scarcely a rook rose to give a brief shelter from the heat. The long grass beside the track was dry. The sun shone hot and cloudless, and the air was sultry, although the month was only May.

The passengers had settled themselves as comfortably as they could for the long journey to the East—railway travel sixty years ago was not what it is to-day. Even the crotchety old gentleman whom Lucy had been watching with amused eyes across the aisle had at last arranged his numerous cushions to his satisfaction and had composed himself for slumber. The severe-looking professor beyond was nodding over his book. Lucy Barclay looked over at them and down at the sleeping baby in her arms. Her own eyes were wide. She wondered how anyone could sleep in that car, when every turn of its wheels carried it nearer to the land of the rising sun—the goal of her heart's desires!

That goal was Lucy's home. Five years before, she had come with the young minister, her husband, to the charge of his first parish in Lounsbury, Illinois. Five happy years they had been for them both, passed among people who loved them and in work that they loved; yet when, for reasons that seemed good to all, William Barclay had accepted a call to another church in the East, Lucy's heart had flown like a bird to the home of her childhood.

"People who go West are expected to come home rich, aren't they, William?" she said, turning her happy face to her husband, as he sat beside her, reading.

"Well, we are rich, aren't we, dear?" he answered, smiling back. "Consider the experience we have accumulated—to say nothing of the baser stuff back there in that baggage car."

Lucy considered. "I am thinking," she said, "how pleased mother and Mary will be with our riches. All the furnishings for our new home, and all the lovely things those dear people have given to me and my little daughter. Did you know, William, that Mrs. Tupper made this for the baby with her own hands?" She touched the cloak of wadded wool in which the child was wrapped.

"They have done more for us than we can ever measure," said her husband. "Perhaps we shall be able to give out to others something of what we have received from them; it is stored away, safely enough, in our hearts."

"And in your sermons," said Lucy, with a quick, proud glance.

He smiled. "The fruits of five years' thought and study and experience—they ought to count for something, oughtn't they, Lucy?—all packed away in that little leather trunk at the end of the car. It was so small

STORIES OF A MINISTER'S WIFE

By Margaret Johnson

III. SALVAGE

that I had it put in here, where I can keep an eye on it. What if I lost it?"

"A trunkful of treasure! I put your preaching coat in the other little leather trunk, and my wedding dress and the baby's things. The big black one held all the rest."

As she thought of the things that she had not been able to bring—the treasure that she must win again, with new care and patience, in another field, her face grew suddenly sober and her eyes wistful. Only a few weeks in the old home of her youth, and then the new parish, the new problems to be solved, the new way to be won, inch by inch, into the hearts and lives of the people.

Would there ever be a work so pleasant as that which they had left behind—or friends so dear? The experience that they had gained—would it avail them among their changed surroundings? Were they not after all going helpless, empty-handed, to the new field of their labor?

Then suddenly she forgot those things in a vision of her mother's face. She looked out dreamily from the window, and saw, with her smiling eyes, not the level grassy plains of Illinois, but the white steeple of the little church in Rivermouth, the hills and pastures of New England, the sea, breaking, breaking on the rocky cliffs.

Noon came and passed. The baby woke and, being an adorably sunny, blue-eyed, dimpled child, received her due share of attention, and quipped it right royally in her father's arms until even the crotchety old gentleman and the severe professor melted into answering smiles.

At three o'clock Lucy, crooning a lullaby under her breath, put the child to sleep again. The train raced on across the endless miles. And with it now there raced, far down on the edge of the horizon, a little cloud. Growing, and ever growing, that cloud, harmless enough at first, began presently to assume, to the careless eyes watching it from the car windows, a sinister and threatening look. Its hue was green, its shape peculiar. It spread and spread and rose higher and higher toward the zenith—a great vulture with dark wings hovering above the earth. Lightning began to dart through it; thunder mingled dully with the rushing of the train.

Lucy was timid in thunderstorms. "I hope it will not be a heavy one!" she said.

Her husband did not answer; but he put her with the baby in the end of the seat away from the window. He had seen the sky look like that once before.

Darkening the prairie and blotting out the sun, the cloud swept higher and higher. The engine shrieked at it in defiance and sent out a great feather of black smoke, which the wind caught and dashed back furiously against the windows. Then, with a blinding flash that seemed to fill the whole hollow of the skies, the cloud parted and the storm broke.

Rain, wind, thunder, lightning and hail—such a fury and a tumult Lucy had never seen or dreamed of. She bent her head forward over the baby in her arms and closed her eyes to shut out the dazzling glare. Her ears were filled with the roar and crackle of the thunder.

Within the car there was a hush of awe and terror. The crotchety old gentleman had forgotten his cushions and sat upright, staring out into the strange world of wrath and darkness. One of the women in his party was crying softly with fright while another, half crying, too, tried to comfort her. Anxious husbands reassured their wives and daughters with cheery words. A little knot of men in the forward end of the car—men who knew the storms on the Western plains—began to take down and to unfasten their traveling rugs.

Lucy bent closer over her child. "Look up, dear," said her husband very quietly. "You will never see such a sight again, I think."

Half awed, half comforted by his voice, Lucy lifted her eyes, and in the wild splendor and majesty of the scene before her forgot to be afraid.

A tempest of hail, driven against the side of the car, shattered the windows. The rain and the icy drops

beat in. Lucy wrapped the child in its wadded cloak and shielded herself as best she could while her husband went into the seat behind to fasten his traveling shawl up over the broken pane.

The car swayed and shook. The engine shrieked again, and the train shot forward, quickening its speed, to reach if possible the shelter of a little cut not many miles ahead.

"Can you hold that corner down for a

moment?" said William to Lucy, as he struggled with his flapping shawl.

When his wife leaned forward and caught it with her free hand, there rose above all the tumult round her, above the rush and racket of the wheels, the booming of the thunder, the clamor of the icy rain, another sound, deep, indescribable, appalling—a roar that seemed to fill and rend the universe.

A cry went up in the car. The passengers sprang to their feet. But before they had time to look into one another's blanched faces the tornado was upon them. It struck the train broadside and turned it over as a child would upset a toy; then, leaving it lying on its side in a shallow ditch half filled with water, the storm swept on.

"My baby! Oh, my baby!"

Lucy's voice was a shriek in her own ears; but in the wild terror and confusion of the moment no one else heard her. She had not lost consciousness in her fall, but after the first bewildering shock had realized that her child had been torn from her arms.

Raising her head, she thrust out her arms in anguish. By a great flash of lightning she saw the strange chaos into which she had fallen—broken seats, shattered windows, the jam and floating debris of the wreck. Then the darkness shut her in again; and she felt herself sinking, sinking into its unknown depths, until the soft, deep waters of unconsciousness closed soundlessly above her head.

From those depths she came floating slowly back at last, with a sound of voices, like the murmur of the waters, in her ears.

One voice that spoke close beside her, she knew. It was her husband's; and she spoke—or thought she did—in answer. What she said must have satisfied him, for she realized presently that he had left her side.

He was alive, then, and safe; but her baby was gone. She had waked with that fact fixed firmly in her mind. She was still lying in a tangle of wreckage, with her head on a cushion and her feet in the water. The car seemed a great black cavern, full of echoing noises. From its roof she saw strange stalactites hanging—the feet of people who had climbed up and perched among the broken seats, to be out of the water.

She smiled at that in vague amusement. Her despair had overwhelmed her like a narcotic. She lay passive, without pain of mind or body. Only one thought possessed her: she had been discontented, unbelieving, at going to her new home empty-handed. And now she had lost her baby. She knew that without feeling it. Presently, through her stupor, she heard a low, persistent sound near by: it was a woman sobbing.

"Don't cry!" said Lucy, with a vague and childlike instinct of sympathy.

"I guess you'd cry," moaned the woman, "if you'd lost all your money and jewels and

REMEMBERING-AUNT-ANN

By Lulu Linton

everything, as I have! They were in my little handbag, where I always carry them, and I never let go of it for a moment till the shock came. And now it's gone, and I don't suppose I shall ever see it again! To think such a thing should happen to me, when I'm always so careful—it isn't fair—it isn't right—"

Her voice became a mere babbling in Lucy's ear; but again her instinct, the cultivated instinct of the minister's wife, urged her on to help where help was needed.

"You mustn't complain," she said distinctly, although with an effort. "You may get back what you have lost; but if not, you must try to be resigned—you must remember that all is for the best, and that we have no right—"

There she stopped; for with the sound of the stereotyped phrases, at which she would have smiled had she been herself, her own apathy was broken. For the first time she realized with full consciousness what had befallen her, and with the realization her despair gave way and her whole being melted.

"Oh, I am sorry for you!" she cried out to the woman in her natural voice. "I have lost—something—too!"

And she broke suddenly into natural tears, weeping her heart out in grief and yearning.

At that moment another sound came out of the darkness—a sound at which another instinct leaped up in the mother's heart, stronger than all her weakness, so that she lifted herself and sat up with a cry.

"What!" said the woman beside her; and then the lightning flashed again, and she saw her husband hurrying toward her, and close beside him, lurching and stumbling through the water, the severe professor, severe no longer. His face, white in the weird light, was cut and bleeding, but the smile it wore made it seem to her the face of an angel; for in his arms he carried a bundle—a little bundle, wet and bedraggled, warm and moving, wrapped close and safe in a little wadded cloak.

"You see," said the professor, telling his story for the fourteenth time to an admiring auditor perched near him in the dark, "I was pinned down at first,—no, only bruises; no one was badly hurt, thank God!—and when I flung out my arms, my hand touched the queerest thing—bare and little and warm; and I pulled on it, and—it was the baby's foot! I dragged her out from under something that had fallen slantwise against the side of the car, and made a sort of shelter for her. I think Mr. Saunders has it now."

"It's under my head," said the crotchety old gentleman feebly. "Some one put it there; but it's very wet and anything but soft."

"It may not be soft," said William Barclay, with a chuckle, "but I am sure it must be dry. Hold on to it, for my sake, Mr. Saunders; if I am not mistaken, it contains my sermons."

"They'll never be dry again, then," retorted the professor.

And Lucy heard them laughing together in the dark, as men laugh when a great peril is safely past.

All through the long night with their cheery courage they kept up the spirits of the wet and weary prisoners; but Lucy, lying quiet in her corner, felt neither anxiety nor discomfort any more. With the touch of her baby's hands in the darkness her faith had returned. The overwhelming gratitude in her heart left no room for coward fears. Let the future bring what it would—it was in other hands than hers; all would be well.

"Why didn't you tell me it was your baby!" said the woman who sat beside her; she had forgotten her lost handbag and the jewels in helping, woman-like, to care for the found and living treasure.

With the dawn came rescue. To a tavern, still standing in a storm-wrecked town, the thankful passengers were carried; and with them went the little leather trunk. All that day, while her husband foraged for food and clothing, Lucy sat by the fire in her tiny room, drying the precious sermons, page by page, until, blurred and warped, but still legible, they were ready to be re-copied and re-preached over and over again, as the custom was, to listening and loving congregations.

The furnishings of the new home were lost or ruined. The wedding dress and the preaching coat and all the baby's finery, the handiwork of the dear people in the old parish—those Lucy never saw again. But what of that!

When, three days later, she alighted at the station in Boston, and fell into the arms of at least half a dozen of her family, waiting on the platform, they exclaimed at her blooming cheeks and shining eyes.

"You poor dear!" cried her sister Mary. "What a terrible time! How can you look so gay, when you have lost simply everything?"

"Everything!" cried Lucy, hugging her sister as well as she could for the leaping baby in her arms. "What can you mean, my dear? We are the richest people in the world! The things we really couldn't spare were saved to us with our lives; and what more do we want, William and I, to begin life with in our new home, than a baby and a trunkful of sermons?"

SOME insistent sound had roused Ruth Vincent from refreshing slumber. Still only half awake, she thought impatiently that the family next door had begun their Friday cleaning at an unearthly hour. Opening her eyes, she stared at the rough board ceiling overhead, and then at the sunbeam creeping through a knot hole in the opposite wall—and remembered with a happy chuckle that she was far from next-door neighbors. She rose hastily and began to dress, for the days in camp were so precious that she did not wish to lose one moment of them.

Mrs. Graydon, her hostess, heard her stir and slipped a letter under the door.

"Here's a letter for you, dear!" she called. "Jackson rowed across the lake early this morning to get the mail."

"Thank you!" Ruth answered. "I hope it's from the folks at home."

But when she stooped to pick up the letter, she frowned in disappointment. The letter had been forwarded from the home post office.

"Aunt Ann! Why—she never writes except to thank me for my Christmas and birthday gifts—"

Glancing at the calendar beside the washstand, she gasped, and sat down weakly on the bed. Aunt Ann's birthday had passed—and she had forgotten it!

As her mind ran back over the past month, she felt that it was quite natural that she should have forgotten the birthday of an aunt—especially a great-aunt whom she did not remember distinctly. There had been the excitement of getting ready for the high-school commencement, and then commencement week with all of its gay hours filled to the limit. After that had come the invitation to spend two weeks at the Graydon's summer camp.

DRAWINGS BY
SEARS GALLAGHER

SHE WAVED GAYLY TO THEM AS THE
CAR ROLLED AWAY

The last ten days had been brimming over with the pure joy of living.

But why had Aunt Ann written? Surely not to upbraid her because she had failed to remember. Ruth had grown up with the impression that Aunt Ann was—well, different. Opening the envelope, she drew out the note, written in a clear, precise hand; it read:

Dear Niece. I am writing to express to you my thanks for your remembrances of my birthday. All three of the packages arrived on the morning of that day, and I wish to assure you that I greatly appreciate your thoughtfulness. Very sincerely,
Your great-aunt, Ann Vincent.

"My three packages! What in the world does she mean?" Then suddenly Ruth rolled on the bed in a paroxysm of hysterical laughter. The thin walls of the summer cottage could not shut in such a tumult of merriment try as she would to muffle it, and immediately three girls in kimonos came rushing in and demanded to know at once what was causing such hilarity.

"It's—it's—my Aunt Ann," Ruth gasped, "and mother—and Aunt Helen and Aunt Grace!"

"Well, you've known them all for some time. How did you happen to discover all at once that they were so very amusing?" Irma Graydon asked, shaking her guest soundly.

"It's about Aunt Ann's birthday—I forgot it! But evidently the folks at home remembered in time, and to save me from disgrace each of them sent a present in my name, for Aunt Ann writes to thank me for her three gifts. I'm wondering whether it was three breakfast caps that they sent, or three handkerchiefs with tatting on, or three pairs of bedroom slippers."

Her friends joined in the laughter, and Mrs.

Graydon, who had entered in time to hear Ruth's explanation, laughed, too; then her face grew thoughtful.

"We'll hope that your Aunt Ann was not offended in any way," she said.

Everyone in the home town knew how hard little Mrs. Vincent and her two delicate maiden sisters had had to struggle to keep a home together and to keep boisterous, romping Ruth in clothes, shoes and books while she climbed steadily from the baby room, through the grades and through the high school. Occasional gifts from Aunt Ann, the one living relative on the Vincent side, had helped; but since the funeral of Ruth's father, whom Aunt Ann had reared, educated and loved in her own undemonstrative way, that lady had never visited his family.

Early in June Ruth's mother had written to Aunt Ann and asked her to visit them during commencement week; she hoped that when Aunt Ann should hear about Ruth's wonderful achievement in the high school, and her longing to go on with her education, she would offer to lend the money for the college course. Aunt Ann had replied very briefly that she could not accept the invitation, because it was the busiest time on the farm. She had added that she hoped Ruth would go to work now, and waste no more time in school, as she, for her part, did not believe in sending girls to college.

Mrs. Graydon knew Aunt Ann's views on the education of women very well, but nevertheless had hoped that this well-to-do relative would change her views and give Ruth the opportunity that she deserved. This episode, she feared, might make matters worse.

When they had all left the room, Ruth sat down in front of the mirror to rearrange her tumbled hair. She glanced squarely into the face reflected there, and suddenly all her laughter vanished.

"I—I'm ashamed of you, Ruth Vincent," she said soberly. "Seeing only the funny side of what must have seemed almost a tragedy to three of the dearest women in the world."

Their faces came to her very clearly. She could see the little worried wrinkle that had come between mother's eyebrows when she had realized that Ruth was too far away to be reminded in time of Aunt Ann's birthday. Then mother had taken down the baking-powder can from the top of the kitchen cabinet, counted carefully the week's allowance, and slipped out enough to buy some little gift, which she had mailed without telling her sisters that thoughtless Ruth had left another burden on her mother's tired shoulders.

Then, as Aunt Helen had hurried down to the office, she had remembered, too. She had decided loyally to keep Ruth's forgetfulness from the others, and had also mailed a package to Aunt Ann.

Gentle Aunt Grace, working ceaselessly over her embroidery or crochet work, had remembered and, snatching time from some of the orders that gave her a small supply of pin money, had made some beautiful thing and, keeping her own counsel, had mailed it to Aunt Ann.

"How dear they are!" Ruth whispered contritely. "I'll try to make it all up to them, but I don't know how to explain it to Aunt Ann."

She was quieter than usual during breakfast, but the others were so much excited over the projected motor trip to Great Caves, that they did not notice her silence. Irma and her father were looking over the guidebook and figuring up the number of miles to be driven that afternoon.

"Allowing for anything that could possibly happen, we'll reach the hotel in time for supper," Irma announced. "And early in the morning we'll get our guide and start through the caves, having all the time we will need to see everything. They say the trip up there is great—such picturesque scenery all along the way. Listen to some of the funny names of the little towns along the road."

Suddenly Ruth sat erect. Irma had rattled off the queer postmark on Aunt Ann's letter.

"Do you really go through Joppa?" she asked. "That is Aunt Ann's post-office address, and her farm lies just beyond the little village. I remember going there once with father. I thought that it was across the world from home then. I can't get used to the way your car annihilates distance."

A little later she caused consternation by announcing calmly, "Girls, I'm going to stay

with Aunt Ann while you go on to Great Caves." No amount of expostulation or argument seemed to affect her decision, and Irma rushed to her mother for help.

"Make her give up this foolish plan," she said. "She's been wild to go, and I can't understand her. She acts so—different. Come and talk to her, and make her see that it is all foolishness."

"Let her alone," said Mrs. Graydon gently. "I think that Ruth knows best."

If Ruth's high courage waned a bit when she stepped from the big car to the roadside where the gate opened into a lane, and where the mail box bore the grim name "Ann Vincent," she did not let the others know; she waved gayly to them as the car rolled away. Walking toward the big, square white house with its green shutters, she remembered that far-away day when she had trotted up the lane by her father's side, holding tight to his strong hand. Something like a sob caught in her throat as she thought of the many times that his dear feet must have passed this way.

There was no sign of life at the front of the house, but, hearing voices, Ruth followed

the walk to the rear. A man in working clothes was starting from the pump toward the back gate, where a horse and plough were waiting, and a woman called after him, "And if you've finished that south patch, you will have time to work the garden over before supper!"

She was a tall, straight woman with snow-white hair, but when she turned toward the girl the two pairs of dark eyes that met were very much alike.

"Aunt Ann, I have come to stay overnight with you," Ruth said in her quick, direct way.

The woman started at the sound of her voice, looked at her keenly, and then held out her hand and said, "You are John's girl."

There were no demonstrations; they shook hands like two men. Then they went into the cool sitting room, and Ruth in her straightforward manner began at once to tell how she had happened to come as an unexpected guest. When she had explained, she added, "I came to tell you about the three birthday gifts."

Aunt Ann's firm mouth twitched slightly at the corners.

"I didn't send them," Ruth went on and told the story. "And while I'm here," she said, "I might just as well tell you, Aunt Ann, that I never have remembered your birthday—though I didn't realize it until this morning; but I know now that it was always mother or Aunt Helen or Aunt Grace who reminded me in time. The part of me that was intended for the purpose of remembering birthdays either doesn't work well, or it was left out entirely. I've a notion that you would have survived without the hug-me-tights and caps and bedroom slippers—but I'm sorry I couldn't remember to send a friendly greeting, anyway."

Aunt Ann's lips had parted in a broad grin now, and, beckoning, she led the way into her bedroom, opened a drawer of the old-fashioned cherry bureau and pointed to the orderly rows and stacks of unused articles, each labeled, "From your loving niece, Ruth."

"Do you mean to tell me that you did not make all these—things?" she asked.

"I'm sorry to say that I did not," Ruth admitted. "It seems that the part of a person that is used to contrive fancy things was left out of my make-up, too. For the life of me, I can't see the use of things like those."

With a low chuckle Aunt Ann pushed the drawer in—and their visit began.

Ruth forgot her fear of the great-aunt whose favor she had been taught to strive for, and each of them started in on a new basis of friendship. Before nightfall they had explored every field, brook and woodland of the old farm, and Aunt Ann had answered all of Ruth's eager questions about her father, and she was enjoying the girl's frank comradeship more than she had ever hoped to enjoy anything in life again.

Ruth felt no regrets over the trip that she was missing. She slept that night in the room that had been her father's, and was standing the next morning by the window, looking out across the fields and woods, thinking of him, when Aunt Ann came in.

"You look just like your father, child," she said, putting one hand almost timidly on the girl's shoulder, "and—I am glad. Since yesterday I've made a decision. I am going to rent the farm and move to the state university town, and I want you to stay with me during school terms for the next four years, and attend the university."

"But—I thought—you didn't approve—"

"Of higher education for girls?" Aunt Ann

SHE WAS A TALL, STRAIGHT
WOMAN WITH SNOW-WHITE
HAIR

finished. "I don't—for all girls. Maybe I've been bitter over that subject. You see, I had wanted to go away to school, and finally father had given his consent and I was going in September; but mother died in August. I couldn't go away and leave father and brother right then, so I decided to wait a while. Just after Thanksgiving Brother John got married and brought his wife home. She was like a dear older sister to me, and helped me plan my clothes and get ready to go the next fall. When I was ready to start, she died—leaving her baby boy in my care. Late that fall John took typhoid and never seemed to want to get well, and then father had a stroke, and went, too.

"I was all that little John had left, and I did the best I could by him. I managed the

farm, and raised him, and I had managed to lay by enough for his education. Then he married, and I was left alone, too old to try to make of myself anything except a plain farm woman. All these years I've been watching how easily education comes to most girls, and how little most of them appreciate it; but I hadn't any right to say that none of them deserved it. I got the notion that you were one of the kind that didn't. Since I've seen you, I'm willing to risk it on you."

The morning was filled with their planning for the future, and Ruth heard the distant call of the auto horn with genuine regret.

At the door she hesitated, then said firmly: "Aunt Ann, they will be so glad at home—

those three dear little women. One by one they will take me aside and tell me about remembering your birthday for me. They will be sure that they helped me in that way to a college education—and—Aunt Ann, I don't want to be deceitful, but I can't tell them that they didn't."

Aunt Ann cleared her throat, and her shrewd dark eyes suddenly grew moist. "That isn't deceit," she said very decidedly. "That is only some of the tact and grace they've been all these years trying to drill into your matter-of-fact Vincent nature, and I'm glad to see that it's taking hold—in the right places."

The horn sounded insistently now from the end of the lane. They started to shake hands as they had done the day before; then Ruth

suddenly threw both arms about Aunt Ann, and gave her a hug that nearly lifted the older woman from the floor.

"Oh, I love you so! I may forget your birthdays to the end of time—but I'll always love you!"

And she was away, down the lane as fast as her feet could carry her.

Aunt Ann stood quite still until Ruth had vanished from sight; then she wiped her eyes and said to herself:

"I used to think it was just palaver and put on, when John's wife was always trying to be nice to everyone, but I guess it came from her kind heart. Seems like Ruth's got her father's straight, honest ways and strong brain and her mother's gentle heart, and—after all—it isn't a bad combination."

THE PLATTSBURGERS

By Arthur Stanwood Pier
In Ten Chapters ~ Chapter Seven

WHEN reveille actually did sound and the occupants of tent 26 again turned out, it was in the stillness and dim light of dawn. A thick mist was smoking up from the lake and blotted out the Green Mountains except in places where a peak shouldered through the curling vapor. Above those peaks the clouds were beginning to kindle. The light grew stronger, and the sun came boiling up through the clouds and over the mountain crests. In a few moments the chill had vanished from the air, and the birds in the woods adjoining the camp were giving an uproarious welcome to Company B.

The setting-up exercises were omitted on this morning, and the company took its way quietly to the mess tent. Ted sat beside Gray at breakfast; opposite them were Meade and some other fellows from Squad 15.

"No wind; we ought to shoot pretty well this morning," said Meade.

"You fellows may, but my rest was too much broken," Gray answered. "Did you hear how Greiner got us up and made us dress in the middle of the night?"

Meade and the others had not heard, and Gray proceeded to enlighten them.

By the time the company was ready to start for the target range every member of it had heard of "the corporal that didn't know taps from reveille," and every member knew his name. All down the company street fellows were laughing together while they made up their packs—laughing over the absurd blunder committed by the corporal of Squad 16. In deference to the captain's orders imposing quiet, their mirth was subdued; but Greiner, as he passed along the street, could not escape the knowledge that he was being pointed out and recognized as the "bonehead" corporal. Consequently, he bore himself with conspicuous haughtiness.

Before leaving the company street every man received a score card on which was to be kept the record of his shots. The order to march, route step, was given, and the company crossed the road in front of the camp and took a path through a thicket of alders and scrub oak, along which they had to travel single file. Meade looked back and saw Greiner.

"What's the time, Dick?" he called. And those who heard laughed, with the exception of Greiner, who answered tartly:

"Time to forget it!"

Meade, who had been smiling in good nature, looked surprised, and then proceeded to whistle taps, to the entertainment of Squads 15 and 16.

Presently they came out of the woods into a long, level open space. At one end of this field was a high sand bank, and against that at

equal intervals targets had been erected, eighteen in all. Beside each target was its number. At varying distances in front of the targets were rows of white slabs sunk into the ground with their tops projecting a few inches above the surface. They looked a little like gravestones; they were to mark the firing positions for the different ranges. Behind the row nearest the targets—the two-hundred-yard range—were tables at which enlisted men were sitting, and other enlisted men stood about in groups. Also there were several officers waiting.

Capt. Hughes halted the company.

"Right dress! Front! At ease! Each squad will take the target corresponding to the squad number. Two men from each squad will take their places together on the firing line; the others will remain six paces behind the scorer. The order in going to the firing line will be, first, numbers one and two in the front rank, then numbers three and four in the front rank, one and two in the rear rank, three and four in the rear rank. You will have ten shots, slow fire, at the two-hundred-yard range from the prone position. Aim so that the top of the sight seems to touch the lower rim of the bull's-eye. Before you go to the firing line see that your sights are properly adjusted and your sights well blackened. Now, each corporal take his squad forward."

Greiner gave the prescribed command, "Follow me!" and led his squad to position in front of the target on the extreme right of the line. He took out of his pocket a piece of candle with which the quartermaster sergeant had provided him, lighted it, and told Ted and Stevens to blacken their sights. They held their rifles in the flame until the metal all about the sights was thoroughly smoked. Gray was disposed to protest. "Here I do nothing but polish my gun all my spare time, and now I'm ordered to get it smooched up!"

"If you don't smooch it up, the reflection of the sun on the sights will pretty nearly blind you," said Stevens.

"Not that it's likely to make much difference in your score in either case," said Greiner.

"That was a hard one," admitted Gray;

"but I may surprise you yet, old top." Ted and Stevens were both all ready and stood waiting. Ted felt nervous; he hoped he should at least be able to hit the target!

"Take your places on the firing line!" An officer with a megaphone shouted this command, and at once Stevens and Ted advanced, as did two men from every other squad.

"Let me have your cards," said the soldier who sat at the scorer's table.

Another soldier, who stood at the firing line, supplied each of them with two clips of cartridges. "Don't load till you get the command," he cautioned them.

"Ready on the right?" called the officer with the megaphone. "Ready on the left? Ready on the firing line? Load!"

All along the line there was the quick rattle of bolts being thrown back and of magazines being filled.

"All right now," said the soldier. "Drop on your stomachs. Number one, you take the first shot, number two the second, and so on alternately. Shoot when you get ready."

Ted and Stevens lay down on either side of the white slab; the soldier squatted beside Ted. "Spread your legs wide and swing them a mite more to the left," he advised.

Farther along the line there was a shot, then another shot, and then the fusillade began. Ted's hand shook as he tried to bring the sight just under the bull's-eye; he pressed the trigger and in his excitement hardly felt

the slight kick against his shoulder. Alas! From the pit in front of the target a red flag was raised and waved to the left of the target, signifying that the bullet had gone wild on that side.

"Take it easy," said the friendly soldier. "You'll steady down in a minute."

Stevens began with a four.

Ted was not wholly able to control the tremor of his left hand, but the muzzle of the rifle did not seem to be weaving about quite so erratically when he made his second shot. He felt tremendously relieved when the marker pointed to the circle just outside the bull's-eye.

"Four on sixteen!" chanted the scorer.

Ted's next shot was a four; he followed it with a bull's-eye. He began to feel exultant, and impatient for Stevens to shoot. He hurried his next shot, and was disappointed to see the marker point to the extreme lower left-hand corner of the target and to hear the scorer call out, "Two on sixteen!"

"Don't hurry," said the soldier. "And be careful not to pull your shots to the left."

On his last five shots Ted got two bull's-eyes, a four and two threes, and while he gathered up the empty shells he felt that he had at least not disgraced himself or the squad. He got his card from the scorer and saw the total, 35, inscribed on it; then he rejoined the squad. Gray and Bradford congratulated him.

"Thirty-five!" said Bradford. "Going at that clip you'll make marksman sure, and you may make sharpshooter."

"I'm afraid, though, this is the easiest of the tests," Ted answered.

Stevens had done better still.

"Forty-three; that's an expert's average," said Greiner, as Stevens rejoined the squad. "If everyone does as well as you two, we'll be pretty good. Come on, Adams."

Greiner fired his first shot; Ted and Gray, who were sitting together, watched for the result. It was a bull's-eye.

"It would jar me awfully to find the lobster is as good as he thinks he is," remarked Gray.

"He's good, all right," replied Ted, when on Greiner's second shot a bull's-eye was indicated.

On his next two shots Greiner slipped up; one was a four, the other a three. Two bull's-eyes followed, then a four, then another pair of bull's-eyes, and finally a four—forty-five in all; but Greiner came back to his squad shaking his head.

"Rotten! Rotten!" he said, as he flung himself down on the ground. "That three there—that boob regular that was coaching me was responsible for that. He told me I was shooting a little high. If he'd kept his face still I'd have done a good deal better."

"O bunk! Your score's good enough without yapping about it," said Gray. "The fellow was trying to help you."

"I don't see why you feel sore over getting forty-five!" said Adams, who had made thirty-two. "I shouldn't be sore if I'd got forty-five." Carton and Howland were the next two to

go up; they came back without having contributed especially to the glory of the squad. Carton scored only thirty points and Howland fell three points below him.

The last pair, Bradford and Gray, took their places. Bradford was afflicted with an astigmatic eye that made accurate sighting impossible. He missed the target exactly as many times as he hit it; and it did not improve his efforts to know that Capt. Hughes and the officer who had given the commands through the megaphone had walked down the field and were now standing directly behind Squad 16. But as a matter of fact they were watching Gray rather than him.

For Gray's first two shots were bull's-eyes.

"This fellow looks pretty good," remarked the officer with the megaphone, and he drew a step nearer.

"Squad 16!" said Capt. Hughes, and laughed. "The corporal got that squad up a little after ten last night and made them dress—thought taps was reveille."

The captain may have had his own reasons for wanting the remark to carry to the corporal's ears. He may have been not wholly ignorant of Greiner's methods of dealing with his squad. At any rate, the remark did carry to Greiner's ears, which, together with his cheeks and neck and forehead, grew bright red.

The other officer laughed. "You ought to have a foolish prize as well as a set of silver cups to offer in your company."

Gray scored his third bull's-eye. The officer and Capt. Hughes watched in silence.

So did the members of Squad 16; but the silence of the corporal was different from that of his men, for his was embittered and theirs was cheerful.

Five bull's-eyes in a row for Gray, then a four; two bull's-eyes followed; then another four; the final shot was a bull's-eye.

Stevens and Ted led a ripple of applause as Gray came back to them, and Stevens said to Capt. Hughes, "Forty-eight! Isn't that top score, sir?"

"I shouldn't wonder. I don't know yet."

Gray, with a twinkle in his eyes, went up to Greiner, and said in the friendliest tone imaginable, "Much obliged to you, old top, for making me blacken my sights. If I hadn't done that I might have made only forty-five."

"Don't call me 'old top,'" said Greiner.

Capt. Hughes and the other officer had moved away. The last shots along the line had been fired at the targets; Capt. Hughes gave the assembly whistle; the company fell in and at command came to attention. "Inspection arms!" ordered Capt. Hughes. And there was a brisk rattle along the ranks as the magazines of the rifles were thrown open. "Order arms!" And another brisk rattle as the magazines were closed and the triggers pulled.

"Hereafter," said Capt. Hughes, "at the end of every target practice each corporal will give the order to his squad, 'Inspection arms!' This is a very important matter. Especially after rapid-fire practice some men are likely to

"TAKE IT EASY," SAID THE FRIENDLY SOLDIER. "YOU'LL STEADY DOWN IN A MINUTE"

THE FUTURE EDUCATION OF WOMEN

By A.W. Harris, formerly President of Northwestern University

BY standardizing processes a factory turns out from uniform raw material identical products. Schools face a more complex task. Their material is not uniform, and to turn out identical products is as undesirable as it is impossible. If all persons were alike and all were to live the same life, it would be easy for the schoolmaster to select the information to be imparted and to determine the methods of teaching. The best education would then be the same for all persons.

Whether intended for boys or for girls, education is identical at the beginning. Young children seem to be very much alike, and the training they receive and the facts they learn are necessary to all people; but from differences that appear at an early age it is evident that even little children are not made in one intellectual mould. One child learns quickly, is alert and confident; another is slow, timid and uninterested. Those are differences of individuals and not of groups. But as children grow, the variations grow with them, and there appear in them special tastes and special abilities that in some cases mark them as by nature fitted for particular pursuits.

THERE are teachers who believe that the ideal education ought to deal with each child separately; but of course such a plan is not practicable, and, if it were, it would not be wise, for children are social by nature, and work better in classes than alone. Within the necessary limits, however, the methods, the processes and the subjects of education are constantly changing in the attempt to fit the schools to special and new needs. For although the general controlling purpose of education is the same, the conditions of life are constantly in flux and flow, and the proper service of school or college must be adapted to them.

It has been said that the things vitally important in education are to develop the intellectual powers and to furnish useful knowledge, coupled with instruction in the better methods of using that knowledge most effectively. But when we ask what knowledge is useful, we find conflicting opinions. Is the study of language useful; is the study of poetry useful; is the study of mathematics useful? There are those who think that there is no need for more than an elementary study of mathematics. Many parents object to their children's studying Latin or literature or music. On the other hand, many of the more influential teachers regard the studies that bear very directly upon the work of life, sometimes called "bread-and-butter" studies, as commonplace and lacking in inspiration and in broad application.

There is a measure of truth in all those criticisms. A schoolgirl may give her time so completely to poetry and history and language that she will have none left for science and its applications to the care of the home that she is some time to make; or she may devote herself so completely to domestic science that her education will be lamentably narrow in its grasp and interest.

Teachers agree that education ought to include both the general or cultural studies

and the so-called useful studies; but the best proportion depends on what the individual is to do, on his abilities and tastes. If the teacher knew what field of endeavor each pupil would seek in later life, he would be greatly helped in making school plans. In the case of boys he can rarely know, for the employments of men are many and unlike, and unforeseen circumstances often determine what their vocation is to be. In the case of girls, however, the difficulty is not so great, for of a hundred girls more than eighty will become home makers; they constitute so large a group with a common life business that special studies and methods adapted to their needs may fairly be required of all. We come, then, to the question whether the schools and colleges are giving to women as a group the best education that may be devised for them.

Until quite recent times a very elementary schooling was thought to be enough for all young people except those boys who were to enter a learned profession. For the girls, the training was limited in amount, and what there was of it was largely ornamental and not exacting in demand. Most of the teachers regarded girls as unequal to the strain of the training that was given boys in the high schools and colleges. It was a common fear that too much learning would make girls strong-minded and unwomanly. The higher schools for girls, known as finishing schools, devoted a large part of their time to manners and accomplishments.

About fifty years ago a small but growing party of men and women began to insist that every educational opportunity offered to boys be offered to girls also. Those persons were fighting, not only to get for girls opportunities as great as those given to boys, but also to get for them the very same opportunities; they wished by that means to prove that girls were intellectually equal to boys. It thus came to pass that in the coeducational institutions—high schools, academies, colleges and universities—and in the institutions open to girls only, the plan of study is closely allied to that of institutions for boys only.

Probably everyone who has long observed the result will admit, whatever may have been his preconceived opinions, that there is now no good reason for doubting that girls are as capable mentally as boys and quite as able to do school work of the most exacting kind.

THE girl has proved that she is the intellectual equal of the boy; but in doing so she has greatly limited her opportunities, for, although there are many kinds of schools and courses for boys, there are very few specifically planned to meet the girl's peculiar needs. Insisting upon the same test that the boys had, she has necessarily confined herself to the most general courses of study and avoided the specialized boys' courses that were not appropriate for her. Moreover, she has been sensitive to any attempt to differentiate her work from his. Now, however, that her victory is won and freely conceded, questions may be considered that at an earlier time would have

called down suspicion on anyone who propounded them.

Has not the time come for an effort to determine how the schools and colleges may best help American girls to become the very best women—mothers, housekeepers, business women, scholars? Is it not true that the coeducational schools and colleges are planned primarily for boys, and conducted with little modification for girls? Is it not true that the girls' schools and colleges—or most of them—are close imitations of those for boys?

DO boys and girls, as groups, differ in mental and moral qualities? Of course there is not a difference of general superiority or inferiority, for, although each group has its points of superiority, the balance is even. Women are distinctly stronger than men in their ability to grasp details; men, on the other hand, seem to have a greater power of initiative.

These gifts are the equipment that nature provides for the part that women and men are to play in life. The woman's care of children requires ability to give attention to endless details and to be patient, effective and contented under the strain of constant interruptions. Girls are more conscientious than boys in fulfilling requirements. A girl will go to the end of her ability in an attempt to do all that a teacher asks, whereas a boy, having done all he thinks reasonable, will refuse to do more.

The boy is somewhat more independent of customs and fashions, and more free to grant privileges to others. The girl is an individualist; the boy is a socialist. The girl's mind responds more readily to sentimental considerations and to mystical influences, and is more intuitional. The boy's mind is slower but more scientific. Are those real differences? And if so, do we need to study them in considering training and education?

Between boys and girls there are great occupational differences. Girls expect to be married, and almost all of them will be charged with the duty of making and conducting homes, in which they will employ and direct labor and manage the family finances. Much more than the boys, they will need to know and enforce the principles of hygiene and to understand the development of children. They will be the home teachers, who will cooperate with the school and the church. Shall not education reckon with those conditions and lay the foundation for the special knowledge that they require?

If by chance a woman does not become a home maker, but enters a business pursuit, she meets unusual difficulties. The man has been in business for generations; the woman is a newcomer. Some employments are closed to her, either because they require too great physical strength or endurance, or because conventional considerations forbid. Americans look with disapproval upon women's working in the fields, as they do in foreign countries; and yet there is much field work that is more interesting, more wholesome and much more suitable than some of the work that American women are allowed to do—such, for example, as they do in laundries and in factories.

Not only are women considered as invaders in men's fields, but also they suffer because men, invading fields once considered strictly feminine, are becoming dressmakers, cooks, laundry managers and clerks. Moreover, for the same work women receive lower pay than men. Do not those difficulties constitute a compelling appeal to give women in their schooling every possible equipment for success?

The women who enter trades and professions are not the only business women, for the housekeepers, whether they realize it or not, are confronted by many business problems. Although the husband earns the family income, the wife spends it; and wise spending is fully as important as large earning. In the house, the woman deals with values in furniture and fuel, in food and clothing; she uses materials and labor; she cares for property; she supervises heating apparatus and household machinery.

To do her work well she needs to know something of good business methods and of how to determine the quality of what she buys. She must understand the chemistry and physics of the daily household operations, and must be sufficiently versed in psychology to be able to defend herself against the tricks of unscrupulous salesmanship and advertising. If she has the handling of the family savings, and especially if she is left a widow, she will need to know something of the general principles of safe investment and the care of money. Do not those tasks fairly demand consideration from the school and the college?

WOMAN is just making her entrance into public affairs, and is taking up public duties that have both a humane and a financial side. She is being called upon to help determine questions of public policy and to care for certain difficulties of local government—such as seeing that the town is wholesome and sanitary and beautiful, and that social and charitable problems are wisely solved. How shall the schoolmaster equip her for those new public duties?

By right of her natural tastes and opportunities and duties, woman has unusual chances for service in the fields of art, music, poetry, literature and religion. May not education recognize those facts and help her to make the best use of her natural abilities? In coeducational colleges the teachers, all or nearly all, are men, although women usually constitute the majority of the students. Should not the faculty of every institution in which there are women students include some women of the highest scholarship, of winning culture and social graces?

The questions, as put, suggest affirmative answers; but it is not so important that those answers be confirmed as that those who are interested in the advance of the general good through women recognize that the time has come when women and men, teachers and the public, ought to set themselves without prejudice to the study of how women may be best trained for usefulness to themselves, their families and their communities.

be left with loaded shells in their rifles. Company, attention! Forward, route step!"

"What time is it?" Ted asked Stevens. "I feel as if the morning must be about over."

Stevens looked at his watch. "Quarter of seven. Still time enough to get a good sweat before luncheon."

Meade, in the squad ahead, called back and asked Greiner what score he had made.

"Forty-five," Greiner answered.

"Best score in the squad, wasn't it?"

"No. One man got forty-eight."

"You fellows in 16 must be pretty good. Our best man got only forty-two. I suppose, Dick, you'd have made about forty-nine if you'd had a good night's sleep, wouldn't you?"

"Oh, cut it out!" said Greiner.

Meade responded by whistling taps. A full appreciation of his friend's sensitiveness about this matter had not yet descended upon him.

Upon returning to the camp the members of Company B were ordered to roll back their tents and make up their heavy packs. When the assembly whistle blew again, they all slipped on the packs and a few moments later were marching out into the country.

Three miles from camp they were deployed across a huckleberry pasture, rough, stony ground interspersed with thorn bushes and thistles. Up and down this hilly tract they were manoeuvred and drilled for three hours, with two half-hour intermissions for rest. It was not merely manoeuvring and marching, either; it was battle practice. That meant crawling and going through the motions of

shooting, springing up and charging, dropping at the word of command into a thorn bush or upon a rock as the case might be, working the bolt of the rifle back and forth, back and forth, regardless of sore elbows and aching shoulders, and doing all this over and over again, while the sun mounted higher in the sky and the pack grew heavier on the back.

The corporal of a squad had in one respect a somewhat easier time than the other members, if he chose to avail himself of his opportunities. The fire commands were issued by the captain and lieutenant behind the line, and the corporal had to keep looking back in order to interpret the commands to his men. So a corporal disposed to shirk could spend a considerable time resting on one elbow and telling his men to keep firing or to fire faster. During the earlier part of the morning Greiner did not abuse this privilege; but as time passed he shared the fatigue of the others, and became less concerned in executing the commands himself than in transmitting them.

Ted was on the extreme right of the line, and when he became too utterly tired to hold his rifle in position and go through the motions any longer he could drop his head and his rifle and rest without attracting a reproof from the corporal—especially as Stevens and Adams and Howland, who were all between him and Greiner, and who all had greater physical strength than he, kept up a pretty constant rattle of bolt and trigger. But Gray and Bradford and Carton were under Greiner's eye, and Greiner saw to it that Gray was goaded to the

utmost limits of his strength. If Gray lowered his rifle in weariness the corporal would say, "Keep on firing, Gray"; or if Gray showed any slacking in his fire, the corporal would call out sharply, "Fire faster, Gray!"

This repeated prodding Gray endured for a time in silence, but at last he snapped out, "Oh, shoot more with your rifle and less with your mouth!"

The exchange of incivilities that ensued was so violent that Lieut. Wharton came hurrying to the right flank and cried out, "Stop that talking! Haven't you been told that the corporal is the only man who is to speak at all? And he only to transmit the command? Now, we'll have no more of this magpie chatter."

Both Greiner and Gray choked down their wrath, and for the rest of the morning carried on their individual operations without paying any attention to each other.

It was a panting and perspiring and begrimed company that halted on the top of a ridge that they had gone through the motions of capturing by a bayonet charge. They were given a few moments in which to rest, and then they were marched back to the camp.

Arrived there, they were not slow in getting rid of their packs. Ted took his off gingerly, for his shoulders ached and the straps had chafed them. After he had washed his face and hands, he felt better and most immoderately hungry. He ate an enormous luncheon, and then became so drowsy that he could hardly keep his eyes open during the lecture on the field wireless. By the time it was over he had

waked up sufficiently to go in for a swim; he was just coming out, when Gray and Bradford, hot and dusty from their cavalry drill, made their appearance and began to undress.

"I certainly am jaded," said Gray. "But, Ripley, you should see the corp."

Bradford chuckled. "You mean the corpse."

"He's lying on his bed moaning and groaning because there's no hide left on him. The old saddle just about flayed him this afternoon. Looks as if he'd adopted the prone position for keeps. He's reaching round and daubing all kinds of ointments on himself; and his language is something shocking."

"I guess your getting a better score than his hurts him more than anything else," said Ted.

"I don't suppose I'll ever do it again, but that certainly was satisfying."

Ted found Greiner in a somewhat less deplorable state than Gray had pictured, but contented apparently to take his ease "in the prone position" and undesirous of speech. When it came time to make ready for retreat, he got up stiffly and hobbled about with many a grimace, but he managed to go through the drill without betraying any great suffering. Ted decided that, whatever Greiner might be, he was not a quitter.

After supper Ted found a crowd gathered in front of the bulletin board at the head of B Street. The list of scores for the day had been posted; Ted was delighted to find that Gray's name stood first. Two men were tied for second place with a score of 46; Greiner came next with 45; Stevens, with 43, was well up near

the top, and Ted himself had the satisfaction of finding that he was in the first third of the company.

"Well, I'm glad some one was worse than I was," said a voice at Ted's shoulder, and, turning, he beheld Bradford, whose name was about tenth from the bottom.

"You'll be up round the middle probably when you've had more practice," Ted said.

"I guess with my bad eye I can never hope to be anything but a boloman."

A "boloman," it should be explained, was one who failed to qualify as marksman.

After the open-air lecture that evening, Ted betook himself to the post exchange and indulged himself in three ice-cream cones. There he saw Mark Perrin, who was gorging himself in like manner with some of his G Company cronies. Ted went over and asked him what score he had made in the target practice.

"Forty," said Mark.

"Good night!" said Ted. "I thought I was pretty good at thirty-five."

"Well, I seem to be a natural-born soldier; that's the only way I can explain it."

A guffaw from the G Company group greeted this remark.

"He can't keep step and he won't follow in file, and he's never on time," one of them said to Ted. "A hot soldier you are, Perrin!"

"They're all jealous—nothing but bolomen," Mark explained to Ted serenely.

Ted returned to his own street. He felt weary and sleepy; and although it was not yet nine o'clock, he observed that a good many of the company were preparing for bed.

He found Bradford and Gray already tucked in; Stevens was undressing; and Carton and Greiner came in soon after Ted.

"This certainly ought to be the prize squad,"

Carton said. "Three men in it with a score above forty. No other squad in the company got two men into that class."

"I guess those seven-foot lobsters at the other end of the street won't look down on us now so much because we're little fellows," said Ted.

"It's the little fellows that have always been the great fighters," remarked Gray.

Stevens smothered a laugh. "Well, what's so funny about that?" demanded Gray.

"Nothing, oh, nothing! I'm not looking for trouble; I'm too sleepy."

The bugle sounded the call to quarters.

"Reveille," said Gray. "Time to get up, everyone."

The remark was heard in the adjoining tent in A Street. One of the occupants, who had a megaphonic voice, at once shouted, "All up! Corporal Greiner says it's time to get up!"

Immediately there was a roar of laughter in both streets, and other men in more distant tents took up the cry and belloved it in sheer enjoyment at making a noise in the darkness:

"All up! Corporal Greiner says it's time to get up!" "Greiner! O-o-o-o, Greiner! We want Greiner!" "Corporal Greiner!" "Corporal Greiner, B Company!" "Greiner says it's time to get up!"

These meaningless shouts, followed by outbursts of convulsive merriment, pervaded the whole battalion. The occupants of tent 26 shook with mirth, all except Greiner.

"They've got your number, Greiner, old top," said Gray contentedly.

"Shut up!" said Greiner. "Shut up, I tell you! And don't call me 'old top.'"

TO BE CONTINUED.

since I turned out this afternoon. My head is splitting, and even in this warm building the chills are going through me like knives."

"Let me call Dr. Fennell to take you home."

"No; I'd feel just as bad there. I'll stick to-night, and if I'm not better by morning I'll have to take a few days off."

The telephone bell rang, and Thad hurried to the booth. The Benton & Summerville line—the largest unit in the service—was calling for more voltage. Two of its cars were stalled five miles out. Thad answered that the plant was running to its limit and that he could do nothing; then, hanging up the receiver, he turned toward the switchboard. Holly was nowhere in sight.

"O Holly!" called Thad. "O Holly!"

There was no answer. Puzzled, Thad started to walk round the machines. Beyond the base of an exciter he caught a glimpse of a square-toed shoe, and in another moment he was bending over his friend.

Holly lay in a huddled heap. His eyes were closed, and there was a puffy, bluish bruise on his left temple. Kneeling beside him, Thad lifted his head and shook him gently.

"Holly! Holly!"

Holly's head rolled loosely round, and he breathed heavily. He had evidently become dizzy, and falling, had struck his head on the machine. Laying him carefully back, Thad stripped off his own coat to make a pillow for his friend. Then he ran to the telephone.

"Holly's sick!" he cried, when Bowles answered. "Bring Dr. Fennell!"

"We'll be there in twenty minutes," the superintendent promised.

Hurrying back to Holly, Thad began to sponge his forehead. The boy stirred, muttered, and then relapsed into unconsciousness.

Every light in the station suddenly grew dim, and Thad leaped to the switchboard. The light on the Benton & Summerville panel was the lowest. Somewhere a heavily iced wire must have fallen. Thad sprang for the telephone.

"Hello! hello!" he called. "Hello! hello!"

Br-r-r-r! He could get no one. The line was out of order. Well, at any rate, Bowles

that giant power would quickly transform the quarter-million-dollar station into a junk heap.

Instinctively Thad jumped for the A governor. Through the grating in the floor beside it rose an angry shriek, as the revolving field of A generator in the basement whirled faster and faster. With two or three quick turns of a thumbscrew he stopped the governor; now, with the turbine wickets closed and the water shut off, the wheel would slow down gradually.

With B generator it was different. The only way to check it was by turning the emergency wheel in the basement. Thad forgot his own danger; he forgot Holly. Only one idea possessed his mind: to reach the handwheel as soon as possible; to stop B generator; to save the station. Racing round the switchboard, he sprang down the iron stairs.

Whew-ee-ee!

Shriller, higher, rose the whistling. The building trembled. The normal rate of the revolving field was eight hundred revolutions a minute. Twice that number was supposed to be the limit of safety. How fast was it going now?

The spider was of cast iron. With increasing speed, centrifugal force would cause it to expand. Between the encircling armature and the twenty poles that projected from the rim of the spider there was only an inch of space. Soon some pole, looser than the others, would begin to rub the armature, to catch, clog, rip, break. Another would go, and then another. The wheel would burst. The flying mass of metal would be hurled up through the cement floor and would wreck the building.

Thad's heart almost stopped beating. Holly was lying insensible on the floor directly over the wheel!

The steel treads clanged under his panic-stricken feet. He must go as fast as he could; yet he must not slip. How much time had he? Everything depended on the screws that held the field poles to the rim of the spider. If they were finger loose, ruin might be only a minute off. Even if they were tight, the limit of safety could not be more than two minutes.

He reached the basement floor and, turning,

came in sight of B generator.

In those few seconds the great wheel had gained fearful headway. It had gone mad! Its whistling had risen to a demoniac screech. A blast sprang from it—warm, oily, sickish, strong.

As Thad hurled himself forward, the thick air wrapped itself round him as if to hold him back. His legs seemed of lead, as they seem when you try to run in a nightmare. As he dashed on through that strange, dim, lonely place, he noticed unconsciously every little detail—the dull red of the oil tanks; the moisture-dark grooves on the floor.

Now he was near the screaming wheel, which was simply a metallic blur beneath its over-arching armature. The steel shaft was turning like lightning, yet seemed not to turn at all. A moment later he was in the corner close to the outer wall wrenching at the small handwheel that was now the only means of closing the wickets above the B turbines.

Twenty turns would close them entirely and shut off the water; he must take at least ten before all danger would be past. Crouching over the wheel, with fingers hooked about its rim, he ground it madly down. His ears rang with the fiendish screech of the revolving field; the reeking air blast buffeted his face. He could feel the solid cement round him quiver.

Suddenly the wheel under his hands stopped with a jerk; he could turn it no farther. The wickets were closed! The scream of the generator began to drop in pitch, and Thad came to himself. He had saved the station and Holly.

Weak from the reaction, he staggered slowly up the stairs. By the time he reached the top the whistling had died to an almost noiseless humming. Soon the superintendent and Dr. Fennell came in. Before long Holly recovered consciousness, and the doctor took him home. Bowles stayed with Thad.

"Black," said the superintendent, when he had heard the operator's story, "I'd like to ask you a question. If you had remembered before you started down the stairs that Holly was right over that wheel, would you have kept on, or would you have carried him outside and let the station go to smash?"

"Mr. Bowles," returned Thad, "I'll answer your question after you answer mine. What would you have done?"

The superintendent laughed. "I guess we won't press that point any further. Only you can feel sure of staying with the Mousam Company until you discharge yourself."

WHEN THE LOAD CAME OFF

By Albert W. Tolman

BROTHERS were never closer than were Thad Black and Holly Corbett. They were born in adjoining houses, and began school in the same year. Together they progressed from marbles to baseball; Thad always caught for the team on which Holly was pitcher. In other things, too, their tastes were similar. At an early age they connected their houses with a string-and-tin-can telephone line. Later they jointly installed a wireless station. All through their high-school course they were tinkering with electrical machines in the Corbett barn.

After Thad had been graduated from high school he went to work as lineman for the Mousam Hydro-Electric Company. Holly entered a technical school. But they wrote to each other every week and so kept their friendship alive.

When Holly had at last completed his course, Thad was chief night operator in the power station at Harrakeesett Dam; and Holly, for the sake of practical experience, became his assistant. Holly's theory helped out Thad's practice, and vice versa. For both the arrangement was perfect.

On a boisterous night in January Thad and Holly came to their work at six o'clock as usual. A bitter gale whined piercingly across the sagging wires.

"Hope you get through the night without any trouble," said Frank Shane, one of the day force, as he bade them good night. "That new pinion ought to be here to-morrow."

Harrakeesett station comprised A and B units, two complete independent sets of machines for transforming water power into electricity. The building had a ground floor and a deep basement that extended several feet below the level of the river. Through its thick cement wall into the wheel pit ran two huge steel shafts, each of which had on its outer end four turbine water wheels inside a cement "beaver house." Movable wickets in the top of the "beaver house" let the water rush down upon the turbines, and thus turn the shafts.

On the basement end of each shaft a revolving field—a great open wheel, or spider, of cast iron, with twenty poles, or magnets wound with wire, projecting round its rim—was closely encircled by a fixed armature, in which the revolution of the field poles generated electric power. That armature, which rose arch-like from the cement floor, formed with the revolving field a generator.

On the ground floor were three large fluted cylinders standing on end, side by side; these were transformers, which "stepped up" the low-voltage current that the generators produced. Before the transformers rose the switchboard—a row of marble slabs, edge to edge, and taller than a man; they bore various dials and meters that recorded the fluctuations of the current.

On entering the station Thad went immediately to the book and looked over the report for the day. Then he telephoned to Ralph Bowles, the superintendent. Meanwhile Holly, with his head hanging and his feet dragging, made a circuit of the machines. His temples ached dully, and now and then a chill ran

over him. He suspected that he had the grippe.

When Thad had finished telephoning, the two boys sat down before the switchboard. Harrakeesett was the central station of a chain of seven, and through its wires passed the current that furnished power to several towns and cities and three street railways. Responsive to the thousand changing agencies that were sucking the harnessed lightning from the different lines, the lights dipped; the drone of the transformers rose and fell; and the index needles, standing on their heads, like little black pollywogs, on the white-faced meters, switched their spiky tails this way and that to indicate volts and watts and amperes.

Outside, the gale shrieked round the building and the river rumbled thunderously over the dam. Within, the deadened hum of the mighty generators in the basement, blending with the whining m-m-m-m-m! of the transformers, kept the air vibrating. Holly shivered as another chill passed over him.

"Hope that new pinion will be in place to-morrow night," said Thad. "It's getting on my nerves to run without it."

Holly nodded; it was troubling him, too. The day before, two cogs had broken on the pinion of B governor—the machine that automatically controlled the flow of water to the B turbines, opening or closing the wickets, and that in case of need would stop B generator altogether. Until a new pinion should arrive, B governor was, of course, useless.

Meanwhile, in order to avoid crippling the system on which so many thousands relied for power, it was necessary to run both generators. Besides, during that storm the street railways had all their snowploughs out. Even with both generators operating at full capacity, the railways were short of current. So B unit had to run, governor or no governor, and Thad and Holly had to hold themselves ready in case of emergency to hurry down into the basement and to stop the turbines by turning a handwheel that also opened and shut the wickets.

So long as this insatiable demand for power continued, the load itself—that is, the work the machine had to do—acted as governor, and held down the speed of B generator. But if that load ever came off, then look out!

"What's the matter?" asked Thad, as Holly put his hand to his head with a groan.

"Guess it's the grippe. I've felt mean ever

DRAWN BY EDWIN F. BAYHA

THE GREAT WHEEL HAD GONE MAD! ITS WHISTLING HAD RISEN TO A DEMONIA SCREECH

would arrive soon. Returning to the switchboard, Thad watched the lights and meters and waited.

Three, five, ten minutes passed. Then, bang! Open sprang the circuit breaker at the top of the Benton & Summerville panel; the powerful compressed spring, suddenly released, forced apart two carbons that by their contact kept the line alive. Between them, as they separated, crackled a dazzling arc, greenish white at first, but gradually changing to red; it sputtered out when the carbons were an inch and a half apart. The line was dead.

The fallen wire, miles away, had burned through the cross arm of its pole and, dropping to the ground, had short-circuited the current and automatically opened the circuit breaker. The generators in the basement, freed instantaneously from the drain of the Benton & Summerville line, were now producing more horse power than could be used; and the two great eighteen-ton wheels, unburdened, began to race—to run away.

As they gathered speed, their hum changed to a shrill whistling. Unless controlled at once

FACT AND COMMENT

THE man who is always trying to save himself trouble is likely to save a lot more than he can take care of.

The Tempter was never so lacking in Grace As to enter the Door that was shut in his Face.

"FARM and arm!" which Mr. Roosevelt took as the text for a recent address in Chicago, puts the immediate duty of the United States in the most concise form.

FRANCE and Germany have each presented statues to the United States. France gave us the statue of Liberty lighting with her torch the sea path to the land of the free. Germany gave us Frederick the Great, to stand before the War College in Washington. The statues well express the ideals of the two nations to-day—liberty on the one hand, military power on the other.

IS it not curious that Germany, which began the war as the greatest of all military powers, and which expected its army to win for it a quick victory, finds itself forced to a warfare of defense and retreat on land, and that on the other hand England, long confident of its power on the sea, is threatened to-day with defeat because its navy cannot protect its merchant vessels from the enemy's submarines?

IT is hard to tell how seriously the break in relations between the United States and Turkey will affect the more than six hundred American institutions—schools, churches, missions, hospitals and libraries—that have been established in Turkey since the first treaty between the two countries was signed in 1831. Turkey has always made things as uncomfortable for American missionaries and teachers as it dared to make them.

CAMPBOR groves may some day be as familiar to us as peach orchards and orange groves. Agents of the Department of Agriculture have found that when planted in hedges fifteen feet apart camphor trees will yield each year about eight tons of trimmings to the acre, from which about two hundred pounds of gum camphor can be distilled. At present prices that means a profit of about one hundred and sixty dollars an acre. The camphor trees are hardier than many of our fruit trees, but are suited only to the southern half of the country.

MANY of those who were and are opposed to compulsory military service would most heartily approve conscription and the draft if it could be applied to idle boys and made the means of keeping them at work. A committee that has been investigating the matter reported to government authorities that there are now two million habitually idle boys in the country between the ages of fourteen and eighteen. Anyone who has noticed the vacant-eyed, loose-lipped, slouchy, cigarette-smoking young loafers who hang round city street corners will easily believe the report.

PEOPLE in all the nations now at war are in hopes that Spain will be able to keep neutral. The royal palace of King Alfonso at Madrid has been and is a clearing house of information about soldiers of all the armies who have been officially reported as "missing." A recent dispatch says that those in charge of the work, which the King himself directs, have handled no fewer than 200,000 cases and have disposed of 150,000 of them. They have also restored to their families 30,000 civilians, most of whom were in the invaded parts of France and Belgium; have helped to send home 5,000 seriously wounded men who were in the hands of the enemy; and have obtained pardons for more than 50 persons who were under military sentence,

many of them women condemned to death as spies. All that work would stop if Spain entered the war.

RUSSIA AND THE PEACE MOVEMENT

THE Russian revolution has entered upon a new phase. The events that marked the change gave no little uneasiness to the allies of Russia, for they feared that the labor and socialist parties would be strong enough to force the government to make a separate peace with Germany. There is of course some chance of such a result, for, like the masses of all the other nations, the masses of Russia are desperately tired of the war, and they have not enough education to understand why, having gained their own freedom, they should be under obligations to continue fighting a power that professes itself ready to make peace with them.

The greatest danger, however, is not of a separate peace, but of internal dissension and civil war. The real power in Russia does not lie in the hands of the provisional government, or even in the hands of the Duma; it lies in the Council of Workmen's and Soldiers' Delegates that sits now in Petrograd. The Council represents an overwhelming proportion of the people, for the upper and middle classes—who of course are divided between sympathy with the old régime and allegiance to the provisional government—number scarcely one per cent of the population.

The masses, for whom those deputies speak, expected that their own revolution would be followed promptly by similar uprisings in Germany and in Austria, and that hostilities would end at once. Unable to comprehend the situation or the psychology of the German people, they could imagine only one reason for the failure of the Germans to rise against their rulers—the new Russian government had taken over the imperialistic aims of the old régime. That belief explains the demonstrations in Petrograd against Prof. Milukoff, the Foreign Minister, and the haste of the government to disavow any schemes of territorial aggrandizement for Russia. "We do not fight for annexations," the cabinet declared, "and we must be assured that the democracies by whose side we fight do not on their part intend to annex any territory from the enemy."

Whether England and France will be able to give assurances on that point that will satisfy the Russian proletariat remains to be seen. If they can, they need have no particular fear of a separate peace.

Meanwhile, two things are certain: the present government will never consent to a separate peace on any terms, and it can remain in power only by winning and keeping the support of the workmen's and soldiers' deputies. If they lose that support,—and the radical socialists, who hate a government under middle-class leaders almost as much as they hate an aristocracy, are doing their best to make them lose it,—they must either step down or embroil Russia in civil strife.

The situation at the moment of writing is not yet hopeless, for the provisional government is made up of men who are wise and shrewd as well as deeply patriotic; but it is delicate and dangerous, and it must long remain so. The effort of Russia itself and of the nations that are friendly to it must be so to shape events that the new republic will not have to pass through the reign of Jacobinism and terror that defeated the aims of the First French Republic, and that it will not, on the other hand, fly into a confusion of incompetent and warring fragments. Success in that effort will mean a great victory for democracy in the world.

THE LIBERTY LOAN

WHEN the Civil War began, the first loan for war expenses that was offered to the public was one hundred and fifty million dollars, and the rate of interest was 7.3 per cent. Secretary Chase estimated that the war would cost three hundred and twenty millions the first year. Now we begin the present conflict with a loan more than twelve times as great as that first loan, and do not even stop to consider how much the war is to cost.

The expense must be borne, no matter what it may be. The United States is about to do an unexampled thing: to offer all that it has in treasure, in service and in men, in order to make the world a better place to live in, and neither to ask nor to seek any other reward than the approval of its own conscience and the satisfaction that comes from a duty well performed. No doubt the world will

applaud, but it is our own approval, not that of others, that we seek. We must do what we are going to do in order to live at peace with ourselves.

One way in which we are going to do it is by lending more than we can easily spare to our government, and indirectly to the allies who are enlisted in the same great enterprise. We shall do it because we are proud to be citizens of a country that fights, not for material gain, but for the highest possible political ideal—justice and liberty and humanity throughout the world.

You cannot do much? Your mite will not count? You are playing false with your conscience if you say it. You are not proud of the stand your country has taken if you leave others to lend their money and you lend nothing. Do your part to make it impossible for anyone ever again to say that America is a nation of dollar worshippers.

THE GREAT QUESTION OF FOOD

THE people of America have come, or are rapidly coming, to a time when the question of food and food values will be serious. It behooves every mother of a family, every head of a household, to make haste to get a little scientific knowledge of the subject.

Times are no longer good. The price of every kind of food is mounting by leaps, but the matter of expense is, after all, not the most important one. We are bound in honor to send as much food as we can possibly spare to the countries in Europe with which we have allied ourselves. That makes it imperative that we should not only practice economy but acquire knowledge as fast as we can. It will not be difficult to inform ourselves. There are many good textbooks, the states publish pamphlets, the United States Department of Agriculture issues bulletins written by experts in clear and simple English, and to be had for a few cents. Many of the publications, indeed, can be had free. They deal with such matters as eggs and their food value; potatoes, sweet potatoes and other starchy roots; turnips, beets and other succulent roots, and their use as food; bread and bread-making at home; studies of the digestibility of some animal fats.

Those are only a few of the many subjects. Some of the bulletins discuss the chemical constituents that give the various foods their value. They show that many things we cling to because we like them are hardly foods at all; they teach how to avoid waste in preparing and cooking food; they give advice about storing and caring for foods, and teach people how to market wisely.

The shortage in the winter wheat crop in this country is going to make the bread question very important. We are going to send as much wheat as we can spare to our allies, and must train ourselves to be content at many meals with bread made from other things than wheat flour. Excellent bread can be made by mixing potato flour with wheat flour; and bread and muffins made from corn meal are both wholesome and palatable.

THE SUBMARINE WAR

EXACT figures concerning the ships destroyed by the German submarines are no longer available. The British government issues a weekly list, but it includes British ships only. Berlin makes public a report from time to time, but it is in round numbers, and contains no corroborative details. No agency any longer collects and publishes all the facts. The truth appears to be that the submarines are not sinking the million tons a month they hoped to destroy, but that they are coming a good deal nearer to doing it than the Allies like to admit, and that they grow more rather than less efficient.

Seven hundred thousand tons a month, or even four hundred thousand, is a serious loss when the amount of shipping available for commerce is probably reduced to twelve million tons. There does not, however, seem to be any grave danger that the submarines can reduce Great Britain to anything like starvation—at least within a year. No doubt Englishmen will have to go without the quantity of food to which they are accustomed, but the necessary supply of iron for France and of coal for Italy is more threatened by the U-boats than the supply of food for England. There is real danger that unless the Allies soon learn how to cope with the submarines the efficiency of both France and Italy will be severely reduced through the lack of coal and iron.

The Entente nations look to the United States for the needed help in this emergency.

They expect our Shipping Board to build cargo ships in such numbers that the menace of a submarine victory will pass away. They hope that our inventors and our naval experts will hit upon some effective means of attacking the submarines, and of driving them from the sea. To those tasks some of the best brains of the nation are devoting themselves; if they succeed, they will have struck the final blow in the war for democracy, for it is on the submarine that the Kaiser has staked his last chance of victory.

PIGS AND POULTRY

A PENNY saved is a penny earned," says the proverb; but in a year of food scarcity like the present it is worth while to ask whether the penny saved upon the farm may not better be used there as capital to earn another penny.

The secret of farm economy is not merely in avoiding waste but in the profitable use of by-products. With that fact in view county agents are urging farmers to keep more and better pigs and poultry. Swine and hens together may be made to turn to profitable account all the waste of the kitchen and of the garden, even many of the weeds that infest it—for example, purslane. Pigs and poultry will thrive on vegetables that are too small or imperfect to market—especially if the vegetables are well cooked; and they will eat other field produce that is often quite disregarded. When the sweet corn is thinned out in the hill, or when, later, a stalk refuses to bear ears, instead of pulling it and leaving it to dry upon the ground, let the gardener try the experiment of cutting it up and offering it to his hens. He may be surprised to see the eagerness with which it is attacked, even where the fowls have a "grass run."

Meanwhile, the pigs, if they are putting on fat from farm produce fed to them, are returning at present prices a very substantial dividend upon their owner's investment, and can often be made to earn a considerable part of their own living. The day is coming when the sty with its filth will be abolished, and the Eastern like the Western farmer will realize the worth of range and pasture for swine. From the pig that is allowed to feast on the acorns of the oak grove are derived ham and bacon of the finest flavor, and the pig is delighted to gather them for himself if he has the chance. He is equally glad to work over a forage crop like dwarf rape sown early for summer and late for fall feeding, and in the process he will profit not only himself but the field in which he pastures. Geese, for a similar reason, are likely this year to be highly profitable to such farmers as have pasture for them and foresight enough to provide a little green forage for their use. The residue of these green crops, after affording pasture to swine or poultry in the fall, may be ploughed in when winter is over, to the profit of the soil.

But it must be repeated that true economy always dictates the keeping of good instead of poor stock. Well-proportioned and well-bred pigs are the cheapest in the long run. They eat no more than scrub stock, and they command a far better market. Moreover, when neighbors cooperate and an intelligent county agent advises, they are not difficult to procure. The same thing holds true of fowls. The farmer cannot afford to keep unproductive hens; and in these days of trap nests the hen that pays for herself can readily be separated from her sister that ought to be hurried to market.

The manufacturer long ago learned that the use or waste of by-products often determines his surplus or deficit at the end of the year. There is a lesson here for the farmer; and in a time when both labor and supplies cost so much it is imperative that it be diligently studied.

CURRENT EVENTS

GERMAN POLITICS.—Copenhagen reported that the German government had announced its intention to reorganize the electoral districts represented in the Reichstag. That would meet one at least of the persistent needs for reform in the German political system.—Alarmed by the activity of the Reichstag's committee for constitutional reform, and by Chancellor Bethmann Hollweg's deferential attitude toward it, the ultraconservatives have issued an appeal to the Kaiser, protesting against the policy of the Chancellor, and insinuating that if the Kaiser will say the word, Marshal von Hindenburg will see to it that the ancient powers of the monarch are restored and defended from democratic assaults.

There is still evidence of profound disagreement between the political parties of Germany concerning the kind of peace to be aimed at. The Chancellor, in his speech of May 15, declined to explain the precise "war aims" of the government, seeing that such a definition at present might satisfy no one, and only encourage further dissension between the Pan-Germanists and the Socialists. He promised that a Russia no longer entertaining views of conquest would find Germany ready for an honorable peace. Discussing his speech, the Socialist Ledebour frankly urged the establishment of a republic in Germany.

CONGRESS.—Congress continued to debate and delay war legislation. Having the report of the conference committee on the army bill before it, the House reversed its action, and voted into the bill an amendment authorizing the Roosevelt volunteer army for service in France. The Senate passed the espionage bill at last, after striking out the provisions for a press censorship, for restricting the use of grain in the manufacture of liquor, and for curbing speculation in food products. The war revenue bill was under discussion and criticism in the House, and Mr. Kitchen, chairman of the Ways and Means Committee, admitted that it was an emergency measure pure and simple, unscientific, and inadequately considered.

THE ALLIED COMMISSIONS.—On May 13 the French and British commissioners brought to an end trips that had taken them to Chicago, St. Louis, Springfield (Illinois), New York, Boston and other cities. They

JOFFRE AT THE TOMB OF WASHINGTON

were everywhere received with cordiality and often with great enthusiasm. Gen. Joffre was greeted with especial warmth. The French commission also paid a brief visit to Canada, and the military men, both French and English, visited West Point.

IRELAND.—At a by-election in Longford, Ireland, a Sinn Feiner named McGuinness, who is serving sentence in prison for participation in the Dublin riots of last year, was elected to Parliament. On May 16 the Premier communicated his plan of settlement to the Irish leaders. It provides for an Irish parliament at Dublin, the exclusion of six counties of Ulster, and the establishment of a council representing both parts of Ireland to consider business common to the whole island.

WAR PREPARATIONS.—The fleet of submarine chasers building for the Navy Department is already leaving the ways. The first craft was launched early in May; others are following almost daily. On May 13 the government Shipping Board began letting contracts for the cargo-carrying fleet it means to provide.

RUSSIA.—After voting against designating representatives to sit with the provisional ministry the Council of Soldiers' and Workmen's Delegates on May 14 reconsidered that action and voted in favor of participation. Prof. Milukoff resigned as Minister of Foreign Affairs and was succeeded by M. Tereshtenko. The discipline among the troops was still further relaxed, and on May 13 Gen. Korniloff, commander of the Petrograd garrison, resigned rather than submit to constant interference in his command by the Soldiers' Delegates. The next day Gen. Guchkoff, the Minister of War, resigned in protest against the course affairs were taking, and M. Kerenski, the Minister of Justice, took his place. On May 15 Gen. Brussiloff and Gen. Gurko resigned their commands at the front. At the same time M. Kerenski, speaking to a delegation

GEN. HUGH L. SCOTT

of soldiers, warned them that Russia was falling to pieces for want of a sense of national solidarity and a willingness to consent to necessary discipline, and told them frankly that national disintegration or a dictatorship were the only alternatives if present conditions continued. On May 15 the Council of Soldiers' and Workmen's Delegates, alarmed at the situation, issued an appeal to the army, warning it of the intrigues of German imperialism and urging it to defend Russia against

the danger of a separate peace with the Kaiser. —The personnel of the United States mission to Russia was finally announced. It includes Mr. Root, Gen. Scott, chief of staff of the army, Mr. C. R. Crane of Chicago, Dr. John R. Mott of New York, Mr. Cyrus McCormick of Chicago, Rear Admiral Glennon, Mr. James Duncan, a vice president of the Federation of Labor, Mr. Charles E. Russell, the Socialist leader, and Mr. Samuel R. Bertron of New York. The commission is a strong one, and it is hoped that it will be of service in restoring order and harmony in Russia. —The United States loaned \$100,000,000 to Russia on May 16.

RECENT DEATHS.—On May 10, former Senator Joseph B. Foraker of Ohio, aged 70. —On May 14, Joseph H. Choate, former ambassador to Great Britain, aged 85.

THE GREAT WAR

(From May 10 to May 16)

Fighting was continual and desperate along the British and French fronts. The British gained possession of Bullecourt and Roex, two villages for which there has been a prolonged struggle, but made no serious impression on the German line. The German counter-attacks were strongly supported, but they did not dislodge the British. At the end of the week another French drive was under way north of the Aisne.

The military collapse of Russia and the cessation of fighting on all other fronts where the Germans are engaged have enabled them to throw tremendous reserves of men into the regions in front of Douai and Laon. It was in those places that their new defensive line was seriously threatened; but they have been able by the use of their reinforcements to check and perhaps to stop the French and British drive. According to one report 500,000 men have been withdrawn from the Russian front and sent into France. London declared that 50,000 German prisoners were taken by the Allied armies between April 9 and May 12.

In Macedonia, the Allied forces took a number of positions from the Bulgarians near Lake Doiran, and held them against counter-attacks.

The Italian army became active on the Isonzo front, and reported substantial gains north of Görz, and over 3000 prisoners.

The British advance in Mesopotamia, no longer able to count on Russian support, has apparently come to a halt. Further advance would only result in dangerously extending the line of communications. According to reports from Petrograd, the Russian forces, both in Armenia and Mesopotamia, are withdrawing rather than advancing.

A British naval force, assisted by a strong flying squadron, attacked the German submarine base at Zeebrugge on May 12. A number of buildings were destroyed, and, according to one report, a breach in the harbor mole was made. Sixty-three persons are said to have been killed. Amsterdam reported a great fire at Wilhelmshaven, and heard that the submarine building yards were seriously damaged.

The submarines continued their activities. The weekly report from London mentioned 23 British ships sunk. Paris reported four French ships sunk in February, five in March and eight in April. A flotilla of United States destroyers arrived at Queenstown and is taking part in the antisubmarine campaign in British waters. It was reported in Washington that a flotilla of German submarines on their way to our waters had been caught and destroyed by British vessels early in April.

There was a sea battle at long range between British and German destroyers in the North Sea. Not much damage was done.

Gen. Pétain has been made generalissimo of the French armies, and Gen. Foch succeeds him as chief of staff. Gen. Nivelle is to retain command of one of the field armies.

Admiral Jellicoe has been made chief of a new naval staff, which is to have full responsible control of naval operations and of ship-building in England.

Italy declared that its patrol vessels had sunk thirteen Austrian submarines in a few weeks, and had entered the harbor of Durazzo and sunk transport vessels there. Sir Edward Carson, First Lord of the British Admiralty, told Parliament that the antisubmarine campaign was making distinct progress.

The Chinese Parliament, in a rather stormy session, refused to pass the declaration of war against Germany that the Cabinet had recommended. The republic of Liberia has severed diplomatic relations with Germany.

The Scandinavian nations, in conference at Stockholm, have again determined to remain neutral, and to take no steps looking toward mediation.

The Swiss government has abandoned its commercial agreement with Germany, since it cannot count on supplies from the United States if reexport into Germany is permitted.

The British government is considering buying up the entire liquor trade of the country and administering it in the interests of the nation as a whole. Prohibition is not likely, but severe restrictions on the use of liquor would be certain in case the plan is adopted.

BLUE STREAKS

TRADE MARK REG. U. S. PAT. OFF.

THE Fast Mail does not travel zig-zag. The straight line route is the shortest, fastest and most efficient. Therefore, the most economical.

It is more economical for you to buy bicycle tires that come direct to your dealer. Thus you save paying needless profits.

Good year Sells Direct to the Dealer

Result: Better Bicycle Tires Cheaper

WHEN you buy bicycle tires you want good tires at a fair price. Not poor tires at high prices. Q It used to be difficult to buy tires this way. Good year Blue Streaks have made it easy. For only \$3.25 each you may now buy a really good tire. Q There's an interesting reason why: Q Goodyear found out that tires were too high priced and not good enough because manufacturers employed expensive ways of selling. Also, they made too many brands. Q So Goodyear cuts out the needless profits between the factory and the rider by selling direct to the dealer. This saves extra cost of handling and brings down retail prices. You benefit. Q Also, Goodyear makes only one bicycle tire—the Blue Streak. By this single standard of production, factory costs are cut down. You get better tires cheaper. Q Every bicycle rider can profit by this Goodyear square deal way of making and selling tires. The Goodyear dealer in your town can supply you. Ride around and get acquainted.

Buy Tires for Long Wear

You don't need tire money so often when you ride on Goodyear Blue Streaks. These tires have a strong two-ply body of rugged fabric. The treads are tough and long-wearing with two reinforcing strips of fabric beneath. This means durability and economy.

Forget Side-Slipping on Goodyear Non-Skids

You can test the Goodyear Blue Streak tread with your thumb. Press on the sharp-edged blocks of rugged rubber. Feel how they "bite" your hand. That is the way they hold the ground under your weight in riding. You needn't worry about side-slipping with these non-skid treads.

Lively Tires Help Your Speed

Goodyear Blue Streaks are not only durable but they are springy and resilient. High grade fabric, strong but light, gives this quality. The two-ply tire body is laid in lively rubber. It's easy to push a bicycle on Goodyear Blue Streaks.

Good-Looking Tires Dress Up Your Wheel

We've made Goodyear Blue Streaks smart-appearing with a clean-cut Blue Streak on each side of the tread. You will be proud to ride anywhere on Goodyear Blue Streaks. Visit your Goodyear Dealer or write The Goodyear Tire & Rubber Company, Akron, Ohio, for his address.

GOOD YEAR

IN THE PARK

By Mary Carolyn Davies

I HAD forgotten children felt so sweet. One sees them on the street, And passes by with only a faint start of pleasure in their being. For they dart Through our gray lives like sea gulls in gray skies, And we, like fisher people, watch with eyes Made by long years indifferent. But to-day Alone, half dreaming, in the crowded park I sat upon the ground, and a book lay Before me. And I read; and then watched the dark And light run through the grass. There were children calling, And hiding, romping, falling.

At length a little group came playing near me; I thought that they might fear me, And so I kept my eyes down. Suddenly, Forgetting them, I raised my head—to see The close face of a child. I smiled, And she smiled back, and came A little nearer me, and asked my name. "Mary," I said. "What's yours?" "It's Geraldine."

Named for my aunt. But she has never seen A single one of all us children yet. And, quickly pointing, "her name's Margaret, And that's my brother Jimmie. Margaret's two; She'll be three, though, next April. What are you Reading?" "A story." "May we sit here?" "Do!" "Or will we be a bother? Mother tells Us not to bother strangers. The grass smells Good, don't it? Will you play Blind man with us?" "Perhaps, some other day."

Then they ran shouting, dancing, where the men Were gravely making a flower bed, And then The gardener, scowling, walked to me, and said, "Lady, don't let your children go Over there where the men are digging." I Stared at him, saying nothing in reply. I knew That it is very wrong to act a lie, But still I looked at him and made no sign. I wanted him to think that they were mine!

The children straggled back, and played; then heard The stories that I knew, and scarcely stirred. I caught up Margaret in a little ball And kissed her face—child faces are so small! The rounded mouths! The little, curious shape Of the soft ears, and the curls in the nape Of the proud baby necks! Their arms are white, And Jimmie put his curls upon my knee, And Geraldine came closer bashfully And pressed against me. Jimmie hurt my feet By leaning on them. Margaret snuggled tight. I had forgotten children felt so sweet.

THE MUSIC THAT WAS HEARD

HERE is an old story about the brothers in a monastery "somewhere in France" long ago. The monks were beloved throughout the countryside for their loving sympathy and kind deeds; but as it happened, not one of them could sing. Try as hard as they would, the music in their services was a failure; and it became a great grief to them that only in their hearts could they "make melody to the Lord."

One day, however, a traveling monk came by and asked for entertainment; and to the great joy of all the monastery he proved to be a wonderful singer. High and sweet and clear his voice soared over all the other voices. And one by one the rest of the monks stopped singing to listen, until finally the visiting brother sang alone. No envy, however, filled the hearts of the good brothers in the monastery. Instead, they rejoiced with each other that now at last they could have beautiful music in their chapel services, and they planned to keep the traveler with them always.

But that night an angel came to the abbot in a dream.

"Why was there no music in your chapel to-night?" he asked. "Up in heaven we always listen for the beautiful music that rises from the services in your monastery; and to-night we were sadly disappointed."

"Oh, you must be mistaken!" cried the abbot. "Ordinarily we have no music at all that is worthy of your hearing; but to-night we had a trained singer with a wonderful voice. He sang the service for us, and it was so sweet that we all stopped to listen. For the first time in all these years our music was beautiful."

The angel smiled. "And yet, up in heaven we heard nothing," he said softly.

IN CIRCULATION

AS Sidney entered the library, Janet's dark head was still bent over her work, although it was seven minutes after five by the library clock. Sidney promptly walked across to the desk.

"Is this the information desk?" she asked. "I should like to inquire if the attendants in this library are not under the eight-hour law?"

Janet sprang up, laughing. "It's terribly hard for this attendant to squeeze herself into it," she acknowledged. "I just wanted to look up some French reports—I hadn't had time before. And anyway, I have to wait until Madge Harkness relieves me."

Madge Harkness, however, was crossing the room very leisurely; evidently Madge was in no danger of being cramped by the eight-hour law. She listened indifferently to Janet's explanation of some memoranda that she was leaving, and dropped lazily into the chair behind the desk. Janet, however, did not notice—she was looking half apologetically, half whimsically, at Sidney.

"If you don't mind waiting just three minutes longer until I investigate the biography shelves?"

"May I come, too? What's the matter with the biography shelves? They look very nice and orderly to me." Sidney had followed without waiting for permission, and was looking over Janet's shoulder.

Janet turned impulsively.

"What's the matter with them? Everything! Library books are to be read, not to stand round on shelves and look nice. They ought to be getting thumbed and dog-eared and dirty—and be doing

something down in people's lives. I try and try every way I can think of, but people won't take them. I could just cry over it."

Sidney studied her curiously. "It seems so queer to care like that," she said.

"Care like that? Of course I care like that! How can I help it? I care like that over every beautiful thing that people keep out of circulation anywhere—homes and talents and beauty that would make other lives so rich, and they don't see—they don't see! If I had a home, wouldn't I use it, Sidney Faris?"

Sidney's face had changed. "Maybe," she said slowly, "the people with homes don't know how to get them into circulation, Janet."

Janet did not hear. Her quick eye had caught a hole in the orderly rows—two holes. She was leaning forward breathlessly. When she turned, her eyes were shining.

"It is, it is!" she cried. "The Life of Mary Lyon is gone, and I just know that little, discontented teacher took it. I begged her to so. I wanted her to see how big life—and teaching—could be. And the other is Lincoln's Life that I have been trying for a month to get Freddy Bryan to read. Oh, I'm so glad, Sidney—so glad I can't tell you! There, I am going now; it won't take me half a minute to get my things."

Out in the keen autumn dusk Janet drew a long, eager breath. "Oh, it's a fine old world!" she cried. Sidney did not answer. She was thinking hard. Did she care about putting things into circulation—her things—like that?

WHEN THE COMPANION DID NOT COME

IN the fascinating picture of boy life on a Western farm that the author, Mr. Grant Showerman, calls *A Country Chronicle* there is one chapter that will especially interest the readers of *The Companion*. Like Mr. Browning's *Going After The Companion Thirty-Six Years Ago*, which we printed in 1915, it illustrates the affection that three generations of readers have felt for the paper. It may add a little to the interest of the sketch to know that the serial story that the boy was following so eagerly was Mr. Trowbridge's famous tale, *The Pocket Rifle*. The chapter follows:

We hear my brother and my father come in through the woodshed door. They stamp a great deal, and then we hear them sweeping the snow off their feet and out of the door. They come in and wash.

My father says, "I declare, it's all you can do to see from the barn to the house! Makes me think of what they say about the blizzards out in Dakota."

We all sit down to dinner. My mother says, "I read of a man out there the other day that got lost going from his house to his barn. When it cleared up, they found him within a stone's throw of the barn. 'Tain't safe to go out without holding on to a rope tied to your house, out there, they say."

We have fried salt pork, potatoes and gravy, and onions sliced in vinegar. My brother sits and eats without saying anything. When I ask him for things, he passes them without stopping or looking at me.

When we are through, I get up and look out the north window. The glass is all steam. I can just see the barnyard fence, and that's all. Everything is white. The wind makes a rushing noise. The snow makes a little ticking sound when it blows against the glass.

My father says, "This is about the worst we've had yet, ain't it? Seems to me we're getting a good deal of snow this winter."

We all sit round and read. At half past two I say, "I guess I'll go down to the depot."

I always go down to meet the three o'clocks on Saturday, because that is the time *The Youth's Companion* comes.

My brother says, "Well, you must be sick! You think they'll be any trains through to-day?"

But I keep thinking of *The Companion* and the continued story. I think of the way Mr. White tears the wrapper off the bundle and folds every paper and puts it in the right place. I think how smooth the paper feels and of the fresh paper smell.

I put my cap and comforter and mittens on and go down the hill. The snow is so deep I can hardly walk, and I soon get warm and out of breath. The wind blows the snow into my face until I can hardly see.

When I get halfway down the depot hill I can see that the rails are all covered up. No one would know there was a railroad track there if it weren't for the switches.

There is nobody in the store except Mr. White. When I go in he is reading a newspaper.

Mr. White looks at me over his glasses. He says, "I'm awful 'fraid you won't get your *Companion* to-day."

I say, "I thought maybe that's how it would be, but I thought it might come." I feel disappointed.

Mr. White says, "The girls'll be sorry. And hanged if I know what to do without it myself, I'm so used to havin' it come Saturday. I kind of like it for part of my Sunday readin'."

Mr. White gets up and looks at the clock. He says, "Quarter to three. Well, I s'pose I must get to the mail. I know mighty well they won't be no trains out to-day, but I s'pose I'll have to get it ready same's if they was comin'. The government's mighty strict about the mail." He is always telling about how strict the government is.

Mr. White goes behind the counter where the mail case is. He says, "Of course, they might come, but then, I don't much expect it." He takes a bunch of letters out of one of the holes in the case and picks up his stamp.

First he stamps all the postage stamps. Then he takes another stamp and stamps the date. Mr. White is very careful and brings the stamp down hard, and then presses on it. He says, "The government wants 'em stamped so's you can see the date and the name of the post office good and plain."

When he is through stamping he ties the letters all up together with some coarse, woolly string. He cuts the string with his scissors and says, "There!" Then he puts the packet in the mail bag.

Johnnie comes in. He stamps his feet and knocks the snow off his cap. He says, "You needn't mind about the mail to-day, White. Everything's laid off on both lines."

Then he says to me, "Well, you might just as well go on home now. You won't get no letter from her to-day."

Johnnie is always making fun of me that way. He pretends that I like the girls.

I start home. At the top of the hill I meet Tip. He has to lift up the rim of his cap to see me.

I say, "Everything's laid off on both lines. Johnnie just said so. No *Companion* to-day!"

Tip says, "Aw-w, now we got to wait till Monday

before we can find out how the story's agoin' to come out!" We stand there a minute. Tip says, "Maybe it'll stop, and number one'll get out to-night before the store is shut."

I say, "No, Johnnie said everything was laid off for to-day. Come on back home with me!"

Tip says, "I can't."

I say, "Why can't you?"

Tip says, "'Cause, I got to get a pound of sugar for auntie. Pa said I had to."

We say good-by, and I start on home. The wind blows so hard on my back that it almost blows me over.

THE BAGWORM

ONE of the lower forms of animal life, the bagworm, imitates man in one respect. While it is a tiny worm, feeding on the foliage of trees, it begins to make clothes for itself. Its garment is a basket, lined with a soft silk, in which it walks about as it feeds. The arbor vitae is its favorite haunt, but it feeds also on the leaves of a dozen other varieties of trees. After the deciduous trees shed their foliage you can easily detect the bagworm baskets, swinging on the bare limbs.

As the worm grows, it enlarges its basket. The head and a small part of the body, including the feet, are exposed to the air, and so the worm can eat

and walk from limb to limb. Its tail is provided with two claws that hook into the basket to prevent it from falling off. The worm can release these claws at will and crawl out of its "clothes."

The bagworm seems to possess a keen sense of pride, too, for in constructing its garment it utilizes the small-leaf twigs of cedars, arbor vitae and other leaves to decorate the outside of its "clothes." The head end of the bag is fitted with a flap. If you sprinkle water on one of the baskets, the worm draws its head inside and closes the flap until the supposed shower of rain ceases. At night, too, it closes the flap.

When the male reaches maturity, he fastens his cocoon or basket to a twig, and when wings appear he crawls out in the form of a black moth and flies away. The female never transforms into a moth, but is wingless. She hangs out of her basket, and when she is ready to lay her eggs crawls back into the bag. Having deposited them, she drops to the ground exhausted and dies.

MONSTERS IN BATTLE

AMONG the curious experiences that Mr. Edward St. Clair Weeden records in *A Year with the Gaekwar of Baroda* was an elephant fight that he was permitted to attend. The great beasts were led into the inclosure with their legs so heavily chained that they could only shuffle along in ludicrously short steps. The men led the animals in at opposite ends of the arena, backed them against the walls and undid their shackles. At first the elephants moved slowly, looking from side to side, as if uncertain of their freedom; but as soon as they caught sight of each other they instantly charged, like two express engines dashing into collision.

It was an imposing, terrific sight to see those two monsters, with raised trunks and locked tusks, swaying backward and forward and exerting their enormous muscular strength to its utmost limit against each other. The crowd grew excited and filled the air with shouts that drowned the trumpeting of the elephants.

At length one of the elephants broke a tusk, and the maharaja, not wishing that they should damage themselves further, gave the order to separate them. Two men crept up behind with huge steel springs set with sharp spikes, which they clapped on their legs. The pain must have been severe, for they both stopped dead in a moment, holding the injured leg in the air; in the next moment they were making for each other again; but by that time other men had run up with ropes and chains and dragged them apart, still trumpeting defiance and waving angry trunks. By the united efforts of some hundreds of men they were slowly hauled off the ground.

THE FATHERS OF THE NEW RUSSIA

AMERICANS will be interested to know something about the men who have done for Russia what Franklin and Washington and Adams and Jefferson and Patrick Henry and the others did for the United States. These men, according to Baron Rosen, formerly Russian ambassador at Washington, are the "fathers of their country," and Mr. John H. Snodgrass, who was long our consul general at Moscow, in an article in the *New York Times* adds his assent to Baron Rosen's words.

Prince Lvoff, the premier, is a landowner and an aristocrat—as Washington himself was—but he has always been a patriot. His greatest service has been in organizing the zemstvos, or provincial councils, for coöperation during the present war, and he stood sturdily against the treacherous and corrupt ministers who led the Czar to his downfall. More than once he did so, at the peril of his property and even of his life. He is a firm believer in

the future of the Russian race, but not a Pan-Slavist in the aggressive sense of the word.

Prof. Paul Milukoff, the new Minister of Foreign Affairs, is the most famous of all the new leaders of Russia. He was long a member of the faculty of the University of Moscow, and has been imprisoned and even sent to Siberia because of the radical democracy he preached from his professorial chair. He has lectured both in New York and Chicago, and he both admires and loves this country. He is, like so many Russians, a splendid linguist. He learned to read and write English during a three-months' imprisonment for some political activity, and he learned to speak it perfectly during a three-months' visit to London. He is the greatest authority on politics and international law in Russia, and the greatest authority on the ethnology and history of the Balkan Peninsula in the world. He is also the editor of a great liberal newspaper, the *Retch*.

Rodzianko, the president of the Duma, is a moderate liberal and an aristocrat like Lvoff. Manuiloff, the Minister of Public Instruction, is a college professor and the editor of the liberal and literary newspaper, *Russkiya Vedomosti*.

Guchkoff, the new Minister of War, is a landowner and a rich man, but he has been active in liberalizing the institutions of the country, and the peasants look upon him as a particular friend of their order. He has also been president of the Duma.

Kerenski, the Minister of Justice, is a lawyer by profession, a determined radical in politics and the representative of labor in the government as he was in the Duma. He is a socialist and a republican, and his influence among the Russian people grows daily.

The leaders of the revolution are all men of substance and education; their interest in politics is patriotic, and not at all class-conscious. There is, indeed, little division among the classes in Russia, and not very much socialism. There is no great industrial population, and there is land enough for each peasant farmer to have his own piece of earth. There is, therefore, little jealousy of mere wealth, especially when it is in the form of land; and the peasant, knowing himself ignorant of great affairs, is ready to follow the lead of his educated and prosperous fellow citizens whenever he is convinced that they are honest, well-disposed and loyal to Mother Russia. It is that combination of high character in the leadership and of trustful confidence on the part of the mass of the population that makes the future of the new government hopeful.

EXPERIMENT BY ARTILLERY

THE ever-delightful Henri Fabre in the recently translated *Life of the Grasshopper* thus describes the ingenious experiment by which he convinced himself that the cicada cannot hear, and therefore that its continual song cannot be a love call intended for his mate's delectation:

Of my experiments in this matter, I will mention only one, the most memorable. I borrow the municipal artillery—that is to say, the mortars that are made to thunder forth on the feast of the patron saint. The gunner is delighted to load them for the benefit of the cicadas, and to come and fire them off at my place. There are two of them, crammed as if for the most solemn rejoicing. No politician making the circuit of his constituency in search of reelection was ever honored with so much powder.

We are careful to leave the windows open to save the panes from breaking. The two thundering engines are set at the foot of the plane trees in front of my door. We take no precautions to mask them; the cicadas singing in the branches overhead cannot see what is happening below.

We are an audience of six. We wait for a moment of comparative quiet. Each of us checks the number of singers and the depth and rhythm of the song. We are now ready, with ears pricked to hear what will happen in the aerial orchestra. The mortar is let off, with a noise like a genuine thunderclap.

There is no excitement whatever up above. The number of singers is the same, the rhythm is the same, the volume of sound the same. The six witnesses are unanimous: the mighty explosion has in no way affected the song of the cicadas. And the second mortar gives an exactly similar result.

WHERE THE WOOL COMES FROM

IN addressing a group of small children recently, one of the workers of the American Humane Education Society tried to impress on their minds the fact that they obtain a great many of the necessities of life from the animal kingdom. Her difficulties are told in *Our Dumb Animals*.

"Where do you get your milk and butter and cheese?" she asked.

"Cows," answered most of the children, although some replied, "From the store."

"And eggs?" demanded the instructor.

"Hens," answered those who did not answer "Store."

"And wool?" asked the instructor.

There was only one answer to this question: "The store."

"Yes," said the instructor, "but how does it get into the store? Now think, wool—wool, you get wool from the back of—what?"

Expectantly she awaited the answer; presently it came from a small girl in the front seat:

"Back of the counter!"

A NEW USE FOR SALESMEN

MORE or less suggestive moral may be deduced from the following story in *Everybody's Magazine*:

Two women, one of whom carried a baby, asked a salesman to show them some carpets. It was a hot day, but the salesman cheerfully showed roll after roll until perspiration streamed from his face. Finally one of the women asked the other if it were not time to go.

"Not just yet," was the answer, with the whispered explanation: "Baby likes to see him roll them out, and we've plenty of time to catch the train!"

PLENTY OF TIME

OUT at the front two regiments, returning to the trenches, says Answers, chanced to meet. There was the usual exchange of wit.

"When's this bloomin' war goin' to end?" asked one north-country lad.

"Dunno," replied one of the south-shires. "We've planted some daffodils in front of our trench."

"Bloomin' optimists!" snorted the man from the north. "We've planted acorns!"

THE CHILDREN'S PAGE

TOMMY'S STAMP BOOK

BY R. K. MUNKITTRICK

When through my book of stamps
I look,
What wondrous things I see!
It's dearer than the storybook
My mother reads to me.

With great delight ten times a day
I stop my play to glance
Upon these stamps of Paraguay,
Greece, Italy and France.

They beam on me in every hue
That in a stamp is seen—
In crimson, lavender and blue,
And cardinal and green.

I look upon the book with pride
To see its pages fill;
And yet I am not satisfied,
And shall not be until

The postman pauses in his tramp,
And in his outstretched hand
I see a letter with the stamp
They use in Fairyland.

♦ ♦

THE "GIVE-AWAY" GARDEN

BY DAISY D. STEPHENSON

WHEN the school gardens were parceled out last year, Rose and Tom Marlow received plots in a near-by vacant lot. The man who owned the lot gladly had it spaded and prepared for the children's gardening.

"I shall hope to see roses and cabbages where weeds and hay-fever germs used to flourish," he told Tom and Rose gravely. And they made a resolution that he should not be disappointed.

It was not an easy job, they soon discovered. Cutworms and new soil must be met and conquered. But Tom and Rose were there early and late, weeding, sprinkling, hoeing and hoping. Their bright eyes spied every garden enemy that plotted to fly or creep in, and their nimble fingers soon put an end to any such foe.

The vegetable and blossom babies began to thrive, eager to repay such faithful care. By midsummer Tom was putting into his little express wagon bunches of fresh, green onions, crisp curly lettuce and roly-poly red radishes that Rose had washed carefully and arranged in neat bunches. Besides, there were pink and lavender sweet peas, nasturtiums and sweet alyssum to lend beauty to the more useful products. Mrs. Marlow, their mother, had first choice, and paid the small peddlers just what the hucksters in the street demanded. There was plenty left to sell after that, and the children were so polite, and their wares so tempting, that the little tin elephant on the shelf swallowed enough nickels and dimes to fill his trunk several times over. Tom then relieved the bursting beast, and kept his treasure in a tin tea box.

"I've made over twice as much as Rose," Tom announced one day in August, "and more than any of the boys in the neighborhood. Maybe I'll win Miss Moore's prize for the best-paying garden, when she judges them, mother!"

Mother looked with questioning eyes at her bright-eyed daughter.

"You have worked as faithfully as Tom," she said, puzzled. "Why haven't you earned as much?"

Rose's flower face flushed and her golden head drooped. She did not quite know how to tell her mother about it.

"Because," explained Tom, feeling ashamed for getting his loyal partner into trouble, "because she's given away most of her garden."

Mother's eyes softened with understanding, and she drew Rose to her side.

"Always a generous fairy, even in business matters," she said, smiling.

"Oh, but I love to, mother!" whispered Rose eagerly. "I'm making enough money; and besides, it's lots more fun to give them away."

Later her mother heard all about it. When Rose and Tom went by old Miss Gray's, Rose would leave a bunch of sweet peas—those fairy butterflies—or cheery gold and red nasturtiums.

"She loves flowers better than anyone," Rose would say to Tom, "and she's too old and rheumatizy to raise them. Isn't it lucky I have them to give her?"

About the Shultz place romped four noisy children. Mrs. Shultz had no time for gardening, and the quartette of towheads were too little to help much. The cheery washerwoman would leave her soapuds to buy onions or turnips of the Marlow peddlers.

"A nickel's worth of each," she would say. Then she would add admiringly, "My, I hope my children will grow to be just like you! What a help you must be to your mother!"

At the Shultzes' Rose always left twice the

THE LAND THAT UNCLE SAM BUILT

BY JESSIE ANDREWS

Illustrated by Sears Gallagher

This is the Land
Uncle Sam built.

This is the Food
That feeds the Folks
That fight for the Land
Uncle Sam built.

This is the Furrow
That waits for the Farmer
That raises the Food
That feeds the Folks
That fight for the Land
Uncle Sam built.

Here's Uncle Sam,
Who sends us the Seed
That long for the Furrow
That waits for the Farmer
That raises the Food
That feeds the Folks
That fight for the Land
Uncle Sam built.

These are the Crops
That grow from the Plants
That spring from the Seed
That long for the Furrow
That waits for the Farmer
That raises the Food
That feeds the Folks
That fight for the Land
Uncle Sam built.

These are the Folks
That fight for the Land
Uncle Sam built.

This is the Farmer
That raises the Food
That feeds the Folks
That fight for the Land
Uncle Sam built.

These are the Seed
That long for the Furrow
That waits for the Farmer
That raises the Food
That feeds the Folks
That fight for the Land
Uncle Sam built.

These are the Plants
That spring from the Seed
That long for the Furrow
That waits for the Farmer
That raises the Food
That feeds the Folks
That fight for the Land
Uncle Sam built.

I'll be the Farmer,
And I'll plant the Seed;
All the young Plants
I will water and weed;
All the ripe Crops
I will gather, indeed,
That grow from the Plants
That spring from the Seed
Uncle Sam loves to send
To the Farmer, his Friend,
Who raises the Food
That feeds the Folks
That fight for the Land
Uncle Sam built!

amount of produce paid for. "They need it so, and they're so poor. She works so hard, and those children must eat bushels!" she told Tom one day, when they talked it over.

When the prizes were given out, Miss Moore presented Tom with the beautiful Honor Badge for having earned the largest amount from his garden. Then, to the little girl's astonishment, she pinned a tiny gold pin to Rose's dress.

"For the one who shared her garden with all," said the teacher, smiling. "A little bird told me all about Rose of the 'Give-Away' Garden." And all the others applauded.

THE FROG'S FROLIC

BY MABEL S. MERRILL

DOWN by the pool in the pasture, where the sun shone pleasantly, lived an ant in his sand house. His next-door neighbor was a grasshopper, who lived in a tuft of grass. Close by the tuft of grass a cricket fiddled all day long under a clover leaf. Then there was the rose bug, who lived in a wild rose that swung overhead. Last of all there was a beetle, who lived most of the time behind a ragged old buttercup leaf.

Those little people were always thinking that they should like to go on a journey. They had talked it over a great many times and had made up their minds that some day they would start out to see the world.

"Now, here's our chance!" cried the grasshopper one morning, as he made three long hops up from the pool to his tuft of grass. "Right at the edge of the water is a fallen leaf that will hold us all. Let's get on it and sail away to parts unknown."

"The frog lives in that pool!" cried the ant, looking out of his sand house. "And talks very loud, too, when things don't please him. Who knows whether he would be willing we should sail there?"

"I shouldn't mind anything he said," declared the rose bug, tumbling headfirst into the beetle's front yard, which was her way of coming to make a call.

"It's high time we started out to see the world," said the beetle, looking out through a hole in the ragged buttercup leaf. "I say, let's go this minute!"

At that all the little people set up a shout and rushed down to the pool, where they stood gazing at the fallen leaf floating on the water.

"Why, it looks strong enough to carry us round the world!" they said.

Suddenly the grasshopper hopped and landed on the big leaf. Then the cricket gave a jump and stood beside him. The ant scrambled on board quite cleverly, and the beetle followed, trying not to wet his feet. As for the rose bug, she suddenly spread her little wings and came floating into the middle of the leaf among her group of neighbors.

"Hurrah! All aboard, now!" cried the whole company.

"Off she goes!" shouted the grasshopper, although the leaf was not moving a bit.

"I shall fiddle every single day while we are at sea," promised the cricket.

"I'm not at all seasick," whispered the ant, "but I don't know about the beetle. Don't you think he looks a bit strange?"

"Silence, please!" called the rose bug, standing up straight in the middle of the leaf ship. "I've thought of a very important question. Where are we going?"

All the other passengers looked hard at one another. "How should we know?" they muttered.

Just then there was a dreadful noise in the water close beside them; it sounded almost as loud as an earthquake.

"Ger-r-r-r-um!" That was what it sounded like, as much as anything.

"It's the frog!" whispered the beetle in a fright. The little people of the pasture were all rather afraid of the frog in the pool, because he made such a dreadful noise.

The rose bug was braver than the others, perhaps because she had wings to fly away with. She tiptoed to the edge of the leaf and looked over. There sat the gruff old frog on a rock under the water with just his nose at the top of the pool.

"What did you say, sir?" inquired the rose bug.

"Ger-r-r-r-um!" answered the frog.

"Why, now I know what he says!" whispered the rose bug. "He says, 'Go home!'"

"It's good advice!" cried the grasshopper. "I've had enough of traveling myself. Think what fun we can have all this long day in the grass!"

"Traveling is certainly hard work," added the beetle. "Why, I feel tired out already!"

By that time the grasshopper had made one long hop to the shore and three long hops up to his tuft of grass. The others followed as fast as they could, and when they were safe in the corner of the sunny pasture they all cried, "O my! Isn't it good to be home again!"

"Ger-r-r-r-um!" said the old frog in the pool, but now it sounded like laughing.

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

THE OPEN AIR FOR CHILDREN

HERE is a growing body of testimony as to the great value of fresh air in the treatment of children. The doctors who confine their practice exclusively to children are almost to a man advocates of the fresh-air life for their little patients. They order it to keep up vigorous health in well children and to reinforce their treatment of sick ones. They declare that all children sleep better, eat better, are better tempered and of a fresher color, if their parents keep them in the open air both day and night. "Outdoor children" are also much less susceptible to colds and other infections than the children who are kept coddled in warm rooms and depend upon a daily walk for their airing.

There are many days in winter, of course, when children cannot be kept out very long, but there are no days when it is not possible to have them in rooms that are virtually open-air rooms. That is equally true of bedrooms. A child need not be chilly and wretched merely because he is in a cool room where the windows are open. His clothes in the daytime and his bedclothes at night should be warm enough to make him comfortable. It may be necessary to have him wear a full suit of Angora woolens and at night to supplement his bedding with a hot-water bottle.

Some fortunate persons are the possessors of a porch that faces south, and many more might be if they would only take pains to arrange one. If there is a properly protected porch on the house, the child should never be permitted to sleep anywhere else. Many obstinate cases of marasmus and malnutrition have yielded quite quickly to this treatment when all other attempts to cure them have failed.

When the porch is lacking, it is often possible to press a balcony into service or to arrange a sleeping shack on a roof. But when none of those are available the next best thing is a room with a southern exposure, in which you keep all of the windows open all of the time so that the air may be as much as possible like that of the outdoors. The acute infectious disorders in children respond well to this treatment, as do common colds, for which infection is also responsible. Of course, you should arrange the night clothing so that it will stay in place, and take care to prevent the cold air from blowing directly on the child's head.

A DAY OF NOTHINGS

"I'M all tired out," lamented Celia. "I know I shall be sorry if I don't go to the club concert to-night, but it doesn't seem as if I could summon the energy. And this morning I was positively eager for it! I don't understand. I've no business to be so used up. If I'd worked hard, or accomplished anything big, but it's been a day of little nothings. I'm ashamed of myself."

"Lie perfectly flat for an hour and rest; make up your mind to do just what you feel like when the time comes, go or not go, but not to decide till after your rest and supper," advised Sophie wisely. "I know what 'nothings' are! They're a great deal worse than 'somethings,' unless they're sprinkled in between and between."

"You're the most comprehending soul, Sophie!" sighed Celia, settling deeper into her cushions. "You always do understand. All the same, it's ridiculous. Why, I haven't done anything."

"Didn't I see a pile of letters and parcels on the hall table?" inquired Sophie. "They're something, you know."

"Oh, those! There are four birthdays in the family this month, and I thought I'd start the presents off to-day. They have to be done up daintily, of course, but I'm rather a star at that sort of thing; I never mind it, although it does take time."

"Fussy! fussy! fussy!" said Sophie, shaking her head. "Fussy tasks are always tiring, whether you know it or not. Letters, too, when you write them in a batch —"

"Most were just little notes, but one was 'fussy,' if you like; anyway, I hated to write it because I don't know her well, and she's touchy. I had to explain tactfully that her committee hasn't accomplished what was expected of it, and she'd better stop visiting round and see that it didn't loaf on its job, or else resign. Pretty little bit of correspondence to undertake, wasn't it?"

"Restful to the nerves," assented Sophie ironically. "I can guess how you felt when you'd finished."

"Like a wrung-out dishcloth," confessed Celia. "And yet, it filled only half a sheet."

"Any more cheering trifles like that?" prompted Sophie.

"Oh, no! Only ordinary things—telephoning, mending, hunting up a missing address, getting rid of a persistent peddler, washing a bit of old lace, cleaning up a bureau drawer—just nothings."

"There's one good thing about that sort of day," said Sophie, reflectively. "It does help to explain things a good deal."

"What things?" demanded Celia.

"Persons, perhaps I meant. The ones who will and the ones who won't, you know, when you ask

them to help with anything big and worth while outside their own affairs. You must have noticed for yourself that it's very seldom the persons without responsibilities, those whose lives are given up to little things—things they could drop or defer perfectly well—whom you can really depend on? They'll do a few more little things, perhaps; but they're too tired and fussed, or they think they're too busy, to undertake the really big tasks; or, if they do, they are erratic and inadequate about doing them, and keep you on edge with anxiety till the last moment.

"It's the persons who already have real, serious responsibilities whom you expect to be ready to shoulder other responsibilities, and who generally do. Of course, we all have little things to attend to, but when they are scattered along with the big ones, or make a part of them, they keep their proportion; they stay little. They lose it when there is nothing big to test them by. They stay petty, but they loom up dominant."

"Mountains out of molehills," suggested Celia.

"And nerves out of nothings," added Sophie.

Celia laughed. "I've lain flat only ten minutes," she said, "but your prescription is working. My nerves aren't as tense as they were, and I almost believe after another fifty minutes —"

"Oh, I do hope so!" cried Sophie. "I'll go with you, if you will. I've been dying to all the time!"

TOMMY TO THE RESCUE

HOW Tommy—by no other name known to fame—came to the rescue of a hungry infant and a distressed mother in a metropolitan subway car is the theme of an incident described in the New York Herald. Somewhat condensed, it runs as follows:

The mother opened a small wicker bag and drew forth a bottle, the slightly gray color of which indicated that it had formerly contained milk. She gave it to the infant, who, after two lusty intakes, discovered the deception that had been practiced upon him and went up two octaves in his roaring. On all sides looks of distress began to appear in the eyes of the passengers.

At about this time a young man of eleven years came into the limelight. All that is known of him is that his first name was Thomas. He broke the side of a large paper bag that rested between him and an eight-year-old companion and drew forth a pint bottle of milk. He looked bashfully at the troubled mother opposite, and when she glanced at him he held the bottle up and nodded the question:

"Want it?"

Two minutes later the only unusual noise in the car was a gurgle; the baby was still "going strong" when the car reached Ninety-sixth Street.

No sooner had the older boy regained his seat, after doing his good turn, than his little companion whispered in awe:

"Say, Tommy, you'll git kilt!"

The answer to that was immediate. An elderly man at Tommy's right turned the boy's hand flat and put a quarter into it, and the smiling mother tossed ten cents at his feet. The boy immediately returned the ten cents to the infant's mother, but, for some strange psychological reason, he kept the elderly man's quarter.

WHAT BIG GUNS ARE MADE OF

ACCORDING to the Millgate Monthly, no fewer than one hundred and seventeen miles of steel wire are wound on a twelve-inch gun that weighs thirteen and a half tons. In appearance this wire, which is of the same quality as piano wire, resembles tape; it is one quarter of an inch wide and one tenth of an inch thick. It is tested to a breaking strength of one hundred and ten tons. The wire unwinds from a reel as the gun barrel revolves; and a tension of about fifty tons to the square inch insures mechanical accuracy in wrapping it round the gun.

Various parts of the gun receive different thicknesses of wire. At the breech of a twelve-inch gun, where the chief strain comes, there are ninety-two layers, which give a thickness of nine and a half inches of wire; but at the muzzle there are only fourteen layers. Over the wire the gunmakers shrink on steel rings at white heat. When they cool, they contract and grip with immense force. The rifling of the barrel is an automatic process—an example of wonderful mechanical ingenuity. When the gun is finished, experts test the accuracy of the rifling with plastic gutta-percha.

UNQUESTIONABLY

THERE was a prominent lawyer in San Francisco who prided himself on his astuteness in questioning Chinese witnesses. He was very nearsighted, however, says Case and Comment, and on one occasion got into difficulty through failing to notice that the dress of a certain Chinese witness was of finer texture than that worn by the ordinary coolie. The following dialogue ensued:

"What is your name?"

"Sell Lung."

"Do you live in San Francisco?"

"Yes."

"You savvy God?"

"Mr. Attorney, if you mean to ask whether I comprehend the entity of our Creator, I will merely reply that on next Thursday evening I shall address the State Ministerial Association upon the subject of the Divinity of Christ, and I shall be pleased if you will attend."

To the day of his death the celebrated lawyer will never escape the question, "You savvy God?"

HE THOUGHT IT WAS SAFE

THE late Bishop Dudley of Kentucky used to relate with much relish an amusing experience that he once had in connection with waffles. At a fine old Virginia homestead, where he was a frequent guest, the waffles were always remarkably good.

One morning, as breakfast drew near an end, the tidy little linen-coated black boy who served at table approached the bishop and asked in a low voice:

"Bishop, won't y' have 'n'er waffle?"

"Yes," said the genial bishop, "I believe I will."

"Dey ain' no mo'," said the boy.

"Well," exclaimed the surprised gentleman, "if there aren't any more waffles, what made you ask me if I wanted another one?"

"Bishop," exclaimed the boy, "yo's done et ten a'ready, and I t'ought yeh wouldn't want no mo'!"

Boys!
Here's the
Bicycle Bug
Get It!

LAST MONTH we asked you if you wanted a beautiful green-gold scarfpin free? We also told you to watch for the answer here this month, 'member?

Get the Bicycle Bug!

Well, the answer is: Send in your full name and address, and the name and address of a bicycle dealer near you, to us and we will give you full instructions where to go to get this lovely stickpin free. No boy who loves bicycling will want to be without one. Write TO-DAY.

UNITED STATES
TIRE COMPANY

NEW YORK

Breakfast - Dinner - Supper

White House Coffee and Teas

Provide for every meal a wholesome, enjoyable beverage of never varying excellence.

WHITE HOUSE COFFEE is the best known and most widely distributed of any brand of roasted coffee in the world. Packed in 1-2-3-5-lb. all-tin packages under perfect sanitary conditions in our famous sunlit factory.

WHITE HOUSE TEAS are from the finest tea gardens of the East. All varieties in ¼ and ½ all-tin packages.

DWINELL-WRIGHT COMPANY
Principal Coffee Roasters Boston—Chicago

Captain of the Red Wing Club

Nothing better or finer than to be Captain of a Red Wing Club. To lead your chums through the countryside on

Red Wing Wheels

For Red Wing is a real man's wheel, made to fit your reach. It has a special 5½" crank, interchangeable with the standard 7". So it will still continue to fit you—when you're years past the "boy's wheel" point.

New England Bicycle Co.
68 High St., Worcester, Mass.

Write for handsome illustrated catalog—and the nearest Red Wing agent's name.

An Ideal Wedding Gift

What better or more practical wedding gift could you select than the high-grade

New Companion Sewing Machine

a gift that will give a lifetime of useful service and be a constant reminder of the thoughtfulness of the giver.

Quality First. This fine family Sewing Machine is used and recommended in tens of thousands of homes throughout the country. No machine, at any price, will last longer, do better work, or more completely fill every requirement of the home sewing. We offer a choice of six styles (foot-treadle or electric), each equipped with a complete set of the best attachments and each warranted for twenty-five years by the Publishers of The Youth's Companion.

Our Low Prices Will Surprise You. How we can sell this first-quality Sewing Machine at so low a price and pay all freight charges to your nearest freight station is best explained in our illustrated descriptive Booklet, which will be sent free to any inquirer.

Write to-day. A postal-card request brings booklet by return mail.

DRAWN BY EMLEN MCCONNELL

SHE CLUNG TO THE ROPE WITH ONE HAND AND WITH THE OTHER PUSHED AGAINST THE WINDOW. IT WAS CLOSED AND LOCKED!

THE invitation came so casually that Elsie Emerson could hardly believe that she was really being asked to her first party. Mrs. Dayton had come up that morning with friends of Elsie's father to see some etchings that Mr. Emerson had made in Paris. As she looked at the pictures, she suddenly turned to the artist.

"Won't you bring your daughter down to my apartment this evening?" she said. "I'm having some young people in for Jack and Dorothy, and now that we are such near neighbors Elsie ought to know them."

Mrs. Dayton smiled at the young girl as she gave the invitation, and it seemed to Elsie that everyone in the room must hear her heart beat as she waited for her father to answer.

"Yes, indeed," he replied carelessly. "Delighted. Now, here is a sketch that illustrates just what we were speaking of."

Mrs. Dayton took the picture into her hand, but she still looked at Elsie. The girl managed to smile timidly. Everyone was so much occupied that it did not seem necessary for her to speak—and she was very glad of that, for her English, although correct, had a distinctly foreign sound. It embarrassed her not to be able to speak her native tongue perfectly. But she had not been in America since her mother had died ten years before, when she was still a little girl; all her school life had been passed in France, and so it was not strange that English was a little hard for her.

It had been the happiest day of Elsie's life when, after the war broke out, her father decided to return to New York to live. She could remember little of her own country, but she loved it with an intensity of feeling that would have amazed most young people who have never had to live in foreign lands. Besides, she was to keep house for her father in New York; and although Elsie had never known her father very well, she lavished all the affection of her lonely life upon him.

At Mr. Emerson's studio in Paris there was no one to care for a young girl, and so Elsie had spent most of her time at boarding school. The life she had led had made her shy and retiring.

Now everything was to be different. Even after three lonely months in New York, which had seemed very strange to her after her rosy dreams of America, Elsie still had hopes of what this new life was to mean when her father was once settled and when she should know some one in the great city. There must be some one for her to know—among so many people.

Day after day she went out on little household errands and painstakingly practiced her English on the clerks at the stores. At home her father was usually either busy in his studio or was talking to one of his fellow artists who dropped in for a chat now and then. They never asked her to join them in their talk, and so she passed much of her time in her own small room with her sewing or reading.

Sometimes, when her eyes grew tired, she would sit and look out of her window, which was at the end of an oblong court. The house, an old-fashioned mansion on Washington Square, had been made over into large apartments; there was one apartment on each floor except the top story. That had been divided into small studio apartments, in one of which Elsie and her father lived.

Elsie's window, just under the roof, had

plenty of light and air, but no outlook except on the bricks and mortar of the court. She could see the perpendicular row of windows on the wall at her right; they belonged to the other apartments in the house; but as the season was late, and most of the occupants of the apartments had left the city for the country or seashore, all the windows except one were closed. That window opened from Mrs. Dayton's apartment on the floor below.

Although she had met Mrs. Dayton that morning for the first time, Elsie felt that she knew the family better than she knew anyone else in New York. When she had sat at her window gay young voices and music had often floated up from the floor below, and so she had come to know that the family consisted of a mother and a son and daughter of about her own age. She had imagined so much about them that she had come to feel really intimate with them. At first she had thought that it would be only a question of time when she should meet them, but after a while she had begun to realize that people often live

within a few feet of each other but never get beyond a casual greeting on the stairs.

Elsie had never mentioned her disappointment—there was no one to mention it to, in fact, except her father, and somehow the girl thought that he would not understand. She was right; Mr. Emerson had lived alone too many years to appreciate easily the needs and the feelings of his young daughter. Moreover, he had been especially preoccupied of late. Although he had acquired a reputation for a certain kind of work in Paris, he had been away from New York too long to drop into things again without a struggle—and he had not sold many pictures.

As the guests turned to go this morning, after looking over his etchings, Mrs. Dayton took Elsie's hand and told her not to forget the party that evening.

"O madam, I could not forget!" Elsie answered impetuously, and then blushed because her speech had sounded so un-American.

Mr. Emerson went off with one of the men of the party for luncheon, and Elsie was left

alone. She did not mind, for she had much to do. She must get a dress ready for the party; her simple wardrobe did not boast an evening gown. But laid away carefully in the bottom of her trunk was a white silk dress that had been her mother's. Elsie had saved it for some great occasion, and surely, she thought, the proper moment to use it had arrived.

Very gently she unwrapped the gown, tried it on, and surveyed herself critically in the glass. It was undoubtedly becoming. The creamy whiteness of the silk gleamed against the whiteness of her neck and arms and brought out the brilliant color of her cheeks and the blackness of her hair.

But Elsie did not notice those details—she was more concerned with the fit, for her mother had been larger than she. Through all the afternoon she worked hard, and when evening came she was tired, but not unsatisfied with the results.

At six o'clock a messenger boy brought a note from her father: he had a business engagement and would not be home until after dinner. For the first time a little, unhappy doubt tried to thrust itself into Elsie's mind, but she banished it. When she had eaten her dinner, she gave herself up to the pleasure of dressing for her first party. She felt no discontent that she must be alone, without any of the loving help and comment that most girls would expect on such an occasion.

She piled her dark hair in high coils on the top of her head—for the first time; then, when she had donned the old-fashioned gown, she looked into her small mirror. Her eyes sparkled back at her with excitement and happiness. There would be other young people at the party—at last she was going to meet some of her own dear Americans whom she had so much longed to know.

She was ready now, and, sitting down, she prepared to wait for her father. She went over in her mind what she should say that evening. She hoped that people did not have to talk much at a party, but whatever she did say she wished to be correct.

An hour passed, and Elsie began to feel uneasy; but she was sure that her father would return. It was still early—in her eagerness she had dressed too soon.

After a while she went into her own room to see whether there were any signs of the party on the floor below. The sound of young voices came to her through the open window, and now and then some one passed in sight. Presently there was music.

She got up and opened her door into the studio, so that she should hear her father the moment he came in. As she passed the mirror, her hair seemed to her a little "mussed." She coiled it again, hastening excitedly lest her father should enter and find her not ready to start.

But still he did not come.

A heavy uneasiness made it impossible for her to sit still. Up and down her room she wandered and out into the studio, but the sounds of gayety on the floor below drew her back often to the window. Nine o'clock came and went and finally ten o'clock. Two bright red spots burned in Elsie's cheeks and a hard lump gathered in her throat. She did not know at what time people went to parties, but probably it did not matter—except, of course, that you missed so much.

After a while there was extra noise and bustling on the floor below,—voices called

back and forth, some of the lights went out, — then, silence. The party was over, and she had missed it. Two great tears stole down her cheeks and splashed unnoticed on her hands, tightly clasped in her lap.

The next thing she knew she was curled up on her bed, sobbing miserably. She should "muss" the gown, but what did it matter? She should never be asked to another party.

But after a while she got up and smoothed out her dress. It was wrong for her to feel so badly. Probably her father had some good reason for not returning—perhaps he had received an order. She sat down by the window and did not move again for a long time. When she did move, it was to draw her breath in sharply, suspiciously. She had certainly smelled smoke.

She went out quickly into the studio and on into her father's bedroom beyond, and into the tiny kitchen, but everything was as she had left it. When she returned to her own room the smell was stronger than before. Puzzled, she hesitated for a moment, and then, leaning from her window, looked down. Suddenly she caught her breath in a quick gasp—for from the window on the floor below came a small but steady spiral of black smoke.

In another moment Elsie had run down the stairs and was frantically ringing the Daytons' doorbell. There was no answer; Elsie did not know that Mrs. Dayton had taken her guests to a hotel near by for supper; the servants slept downstairs. The girl wasted several precious minutes in trying to make herself heard; then, disconcerted, she returned to her own rooms. She had no telephone; if she had had, she would not have known whom to call. As she hurried back to her room, Elsie tried to compose herself and to think what was the best thing to do. So far as she knew, Mrs. Dayton and her children might be in actual danger. Then suddenly it occurred to her that there must be a window directly under hers.

By leaning out as far as she dared, she could just see the sill, and she instantly decided to go down. She had done it once in a fire drill at school. She found a strong piece of trunk rope and with fingers that trembled with excitement tied it securely to the steam radiator. Then, flinging the end of the rope over the sill and bracing her feet against the side of the house, she swung herself over. For one instant she hung dizzily in the air; the next she had slipped down the rope and her feet had found the stone window sill.

Gasping with the effort and trembling with fright, the girl clung to the rope with one hand and with the other pushed against the window. It was closed and locked! Great packing boxes were piled against it! Too late she saw what a trap she had let herself into, but strangely enough the danger in which her position placed her did not occur to her. She was almost frantic with worry because she could not get into the Daytons' apartment.

She called for help—but there was no one to hear her, and after a few minutes she gave that up. Unable to go either up or down, she stood on the window sill and pondered the situation. Carefully turning her back to the window, she next peered out into the court. At first she could not see anything distinctly in the half light; but her long, lonely hours had taught her to know every brick in the place, and gradually things took shape.

Just below her, running round the building, was a narrow ledge. Would she dare to walk on that to the window from which the smoke was coming? With a shudder, she turned her face up toward the sky. The stars had never before looked so big and bright to her. For a moment she gazed at them, and then, bracing herself, looked down again. A wave of dizziness surged over her, so that she had to close her eyes to keep herself from falling.

When she opened her eyes again, she looked down upon the ledge, which seemed waiting for her to decide. It was the only way—and yet, how could she—with nothing to hold to—and turn the angle of the wall, too? Her quick memory for detail told her that the telephone wires that came from the roof above would help her.

She decided that it would be easier to go with her back to the wall. And she would have a firmer hold in her stocking feet; so she kicked off her slippers, one at a time. She listened, fascinated, to hear them fall, four floors below. Would it take her as long as that if she were to drop?

The thought sickened her, but she did not hesitate a moment. She had lost too much time already, she decided. Clinging to the rope, which fortunately was long enough, she stepped down, cautiously, to the ledge. Then she dropped the rope. For an awful instant she trembled so violently that it seemed that she must fall. Then she groped for the telephone wires, found them, took three steps, and then another—and she had turned the angle. The worst was over, she told herself bravely, as she stopped for breath. Her heart was pounding so that she found it hard to breathe. One more step and she must go alone. The wires went downward from there.

Again the dizziness threatened to overcome her; it seemed that she must pitch forward into the blackness. With her eyes tight closed, she went on. Sight could not help her now—every nerve was concentrated on feeling her

way. Half a dozen steps would do it. She counted them painfully—and then, just as she was sure that she could do no more, her hand touched the edge of the window casing. With a quick swing she turned, flung her other arm over the sill and pulled herself up into the room, where she dropped upon the floor.

Utterly exhausted, she lay quite still where she fell; but although she could not have moved at that moment, she did not lose consciousness, and presently the strong smell of smoke reminded her that her task was not yet finished. Aching in every nerve, she pulled herself to her feet and stood looking dizzily round the room.

By the one light that had been left she saw what had happened. A spark from the open fire had set ablaze the rug and a pile of cushions lying on it, and was creeping slowly up a heavy curtain and threatening the more gauzy drapery of the window. Elsie took in the situation at a glance—and turned to rouse the family. Much to her surprise, she found that she was alone in the apartment. But, nothing daunted, she went to work single-handed.

Fifteen minutes later, Mrs. Dayton and her son and daughter opened their front door and halted in amazement at the strange little figure that stood, blackened, begrimed and wet, in the middle of the wrecked room.

Jack Dayton was the first to recover himself. "Why, we've been having a fire, and Miss Emerson has put it out!"

The next moment they were all gathered round Elsie, asking her excited questions, praising her, thanking her, all in a breath.

"How did you ever get in?" Jack asked. Elsie was suddenly much embarrassed. She

Elsie did not hear what they said, so much engrossed was she in what the young Daytons were telling her of the wonders of New York. But when her new friends had gone, Mr. Emerson drew his daughter to him and kissed her.

"Never take such a chance again, little girl," he said, and there was something in his voice that Elsie had not heard for years—not since her mother had died.

"We will surely go to Mrs. Dayton's party to-morrow night," he went on after a moment, releasing her gently. "But go now and get off that wet dress; you'll catch cold."

Then, for the first time, Elsie looked down at the "mussed" and ruined gown, and there

was a catch in her throat as she answered. "O father, I cannot wear it again—I cannot go to the party!"

"Indeed you can go to the party. You shall have the prettiest new dress in all New York. I will go with you to-morrow to buy it. That engagement of mine meant a splendid order, —so I am to be very busy,—but after this I want to see more of my little girl than I ever have done before."

As Elsie went to take off the wreck of the dress that she had got ready so carefully a few hours before, she wondered whether anyone in all the world could possibly be as happy as she was that night. At last New York and her new life had surpassed her rosiest dreams.

BITTERS

By Sheldon C. Stoddard

THE stout gray team owned by Redfield Barnes halted just within the wide-swing gate that led to the hill pasture where the spring ploughing was in progress, and looked round in mild surprise at the delay, for their owner was in the habit of "keeping things moving," as he called it. The tanned face of the energetic farmer usually wore an expression of distinct self-satisfaction, but just now it showed a decided frown. The frown, occasioned by the appearance upon the premises of a reddish-brown dog of the collie breed, was only partly lifted as he turned to the

stiff days in that stony pasture in the hot sun Jimmy'll make up his mind he don't need that little pup nigh as much as he thinks he does. We'll see, anyhow. Go on, Bill!"

Haying was finished at "Red Barns," and the great lofts were well filled. When the oat harvest was well under way, Redfield Barnes said to his nephew one afternoon:

"I guess I've done a pretty foolish thing, Jimmy. I've bought the Egerton heifers."

"What!" exclaimed Jimmy, in excitement. "The five-hundred-dollar ones, Uncle Red?"

"Sure thing, Jimmy. Five hundred apiece,—and there's four of 'em,—pure bred, of course. It's a sight of money, boy. But I don't know; it may be a good thing for 'Red Barns.' There's a great call now for these black-and-white cattle, pure bred, and I'm thinking there'll be a much greater call later on. I'm going to send you after the heifers, Jimmy."

The boy stared in mute astonishment at his uncle. Redfield was leaning on a crutch and he winced as his foot touched the ground. The day before he had been thrown from a load of grain and had sprained his ankle.

"The Egertons are going to leave," the farmer went on, "and I agreed to take the cattle to-morrow or next day; but I can't go with this foot, and almost everyone is busy just now with the oat harvest. One or two men that I could get I don't want. I think I can trust you with the heifers. You've done real well this summer, Jimmy; your potatoes are looking fine."

The boy flushed with pleasure. Words of praise from his uncle were rare.

"Can I take Bitters?" he asked quickly. "Take him along if you want to," his uncle said, smiling good-naturedly. "He'll help some—as much as he hinders, maybe. I've noticed he's quite a cute pup. And I guess you've earned his keep for a year with those potatoes, or will by the time you get 'em harvested."

But it was with much secret anxiety that the next morning Redfield watched the early stage out of sight. High up on the driver's seat was his young nephew—and racing joyously far ahead, the little red collie, Bitters. As the last cloud of dust disappeared, he turned and hobbled slowly back to the veranda.

"Two thousand dollars' worth of pure-bred stock—and just that boy!" he muttered uneasily. "But what's a man to do?" And he looked wrathfully at the offending foot.

Late in the afternoon of the following day Jimmy Downs, following the valley road as his uncle had directed, began to look anxiously for a certain crossroad that should take him to the Wilder farm, where he was to pass the night. He had been delayed, for, used to their quiet pasture, the heifers had been extremely reluctant to take the road. Indeed, without the dog's help, Jimmy would more than once have been at his wit's end; but the collie, now thoroughly in his element, seemed always

"BUT HE—HE WOULD COME, UNCLE RED," ANSWERED JIMMY DOWNS

felt herself blush hotly as she struggled with her heavy hair, which had fallen over her shoulders. She hated desperately the idea of telling how she had come—the adventure seemed so foolish, so unnecessary now.

But the Daytons were all waiting for her answer. "I—I came down a rope!" she faltered.

At first they did not understand; then Jack Dayton went over to the window and looked down upon the ledge.

"Do you mean to say," he said, and his voice was husky, "that you walked along that ledge? Why, you wonderful girl!"

Elsie looked from one to another. How kind these Americans were! They had not thought her silly—they had understood at once.

"I believed that you were asleep," she explained, but before she could say more Mrs. Dayton, who was sobbing, gathered the girl close in her arms. No one had ever made such a fuss over Elsie before—it was surprising, to be sure, but very agreeable.

So, at last, they all sat down in a row on a big couch to talk it over. And Elsie explained shyly about the party, and how it was the first one she had ever been asked to, and how sorry she had been to miss it, but her father had been called away on business; he would be sorry, too, she added politely.

Mrs. Dayton and Dorothy had exchanged frequent glances during this recital.

"I'll tell you what we'll do," Mrs. Dayton said. "We'll have another party to-morrow night—a much nicer one—on purpose for you."

"O merci, madame!" Elsie began in her excitement, then blushed again, and finished primly, "Thank you, Mrs. Dayton, you are very kind." But the sparkle in her eyes said more than her words.

Mr. Emerson was very much astonished when they all brought Elsie home a few minutes later. He had come in and, supposing that Elsie was in bed asleep, was looking over some drawings in his studio. He apologized contritely to Mrs. Dayton—he had forgotten the party—his engagement had been very important—but he was glad that Elsie had gone, anyway.

"But what have you been doing to yourself?" he finished as, for the first time, he noticed his daughter's bedraggled condition.

Then Mrs. Dayton explained—in fact, she and Mr. Emerson talked for a long time; but

much-freckled boy, who was evidently the dog's master.

"I thought I told you not to bring the pup, Jimmy. We don't want him here. I thought you understood that, I thought you did."

"But he—he would come, Uncle Red," answered Jimmy Downs. "And I thought if—if you saw how good he was!"—the boy's brown hand that had been furtively caressing the fine ears of the dog slipped suddenly round the animal's neck

—"and if you saw what a lot he could do, why—maybe you'd—you'd—"

"Do! A lot he'll do—a little mongrel pup like that! He'll eat a lot and hang round underfoot, and probably bark at teams. That's about what he'll do. We don't keep that kind here at 'Red Barns,' my boy—you may as well understand that, first off."

Redfield Barnes cast an approving glance at the substantial farm buildings neatly painted in red and white. The farm name had always seemed to him especially fitting.

"And so I'll tell you, Jimmy," he went on, "you can just take that dog, right now, and—"

Redfield Barnes stopped suddenly, for a look of such keen distress had appeared in the boy's round face that the man was strangely stirred. There were times—he had often noticed it—when, notwithstanding the freckles, the boy's face looked strangely like that of Redfield's favorite sister, the boy's mother, who had died some years before. The big gray horses pulled at the lines and started forward, but the farmer stopped them again.

His eye was on the distant ploughing, and a sudden shrewd smile had lighted his face.

"I'll tell you, Jimmy," he said, "I don't want to be hard on ye. If you want to keep the pup had enough to put in an acre of potatoes up in the pasture there where we're ploughing—it's stony, you know, and weedy—bull thistles and mare's-tail and what not—and raise the whole crop, why, go ahead. It'll take all your play spells and some more, you understand. What do you say?"

"I'll do it, Uncle Red. I'll do it. Thank you," Jimmy replied. "Come, Bitters."

As the boy, with his face once more alight with happiness, walked away, Redfield Barnes laughed softly to himself. "I rather guess that after two or three good

JIMMY EXPLAINED

OF DISTRUST

to be in the right place
at exactly the right time.

The afternoon, too, had proved unusually hot and sultry, with the close, stifling heat that precedes a storm, and the boy, alert to the welfare of his valuable charges, had not hurried them.

It was nearly night when at last the two long rows of scrub bushes that marked the crossroad came in sight. The road was overgrown with grass and plainly had been little used, but the boy turned into it with a sense of relief. With good luck he should yet reach the Wilder farm before dark and then the first half of his journey would be safely over. Calling cheerily to the collie, he started briskly up the crossroad. But he watched rather anxiously a thick bank of inky black cloud that was now coming up rapidly, although not a breath of wind seemed to stir the still, sultry air. It was the unnatural stillness that precedes a great storm, and was broken only by an occasional rumbling of distant thunder.

Instinctively, the boy pressed forward, and as he called to the dog his voice seemed to carry with almost uncanny distinctness. The heifers, too, seemed strangely uneasy, and now and then lowed dismally. Even Bitters occasionally looked back at his master with a whine.

When they reached the top of a little rise, Jimmy saw a quiet valley stretching away to the left and a group of dilapidated farm buildings clustered two hundred yards below. Suddenly a blinding flash of bluish-white light filled the whole little valley, followed instantly by a crash of thunder that was almost deafening. Then, whirling and churning over the woods near by, came a great gray wall of rain. At the blinding flash and the peal of thunder, the heifers for a moment cowered almost to the earth in fright; then, with the boy and the dog following, they raced down the hill toward the buildings.

A rough-looking man in shirt sleeves, who had just shut the doors of the main barn, glanced round and saw the cattle coming. Running out to the road, he swung wide the pasture gate and, waving his arms and shouting loudly, turned the frightened animals into the pasture. The old gate swung shut with a clang.

"Quick, now!" the man shouted, and, followed by the boy and the dog, rushed to the house. They reached it just as the great storm of wind-swept rain and hail burst upon them with a roar that made further speech almost impossible.

"Close shave, that, youngster!" shouted the man, with a grin that was plainly meant to be amiable. "Who be ye, sonny?"

Jimmy explained briefly and with a vague sense of distrust.

"So-o, so-o!" commented the man, and under the unusually heavy eyebrows his sharp eyes twinkled shrewdly. "Wa-al, wa-al, they're a nice bunch of heifers—pure bred, ain't they?"

The boy had not mentioned that fact and did not wish to do so, but he saw no way to avoid it.

"Yes, um-m, I thought so," said the man. "Wa-al, you're all right now, bub—snug as a bug in a rug. Guess we o'n keep ye. Wilder's is two-three mile farther on, and to-night'll be darker'n Tophet, but ye needn't worry. Heifers'll be all right in the pasture—plenty of feed; and you're all right, too—see? But I must say, bub,"—he paused impressively as the storm surged against the rattling windows,— "ye didn't reach cover a minute too quick."

He called to his wife, who came in to greet the boy and who then began to prepare the evening meal. She was a bony, angular woman fully as tall as her husband.

Left for a time to himself, Jimmy's thoughts were busy, and suddenly, with a feeling of uneasiness, he realized whose guest he was. He had heard occasionally, and at ways more or less unfavorably, he remembered, of Marcus James, or Old Mark James, as he was usually called, of whom many curious stories were told. He knew that, if there were one place on his entire route at which his uncle would not have wished him to stay, it was the lonely farmhouse to which the storm had driven him.

And yet—he could see no other way—he must actually pass the night there.

For nearly an hour the storm continued, with occasional vivid electric flashes, accompanied by peculiarly sharp peals of thunder. "The kind that does mischief," the master of the house, knitting his bushy brows, more than once remarked.

When Jimmy went to bed that night he determined to be up and away early the next morning. But he did not rest well during the early part of the night; there were two or three showers with thunder and lightning. At last, however, he fell asleep, and when he woke the sun had been up for an hour. As is usual after a thunderstorm, the weather was clear and bright and cool.

Jimmy dressed quickly and ran downstairs, where Bitters greeted him with a joyful bark. Old Mark and his wife were just coming in from the direction of the pasture, and the boy had a quick premonition that something was wrong.

"Lightnin' played high jinks round here last night, bub," Old Mark said gruffly. "Hit us fair fer a fact—you the worst, though, 's fur's I c'n see yet. Bad job—bad job."

"How is that?" asked the boy, feeling suddenly faint and sick.

"Wa-al, I may 's well tell ye first as last: them four heifers of yours and one of my best ones are dead 's bats—lightnin' killed 'em—under that big maple in the pasture yonder." He pointed with a big bloodstained hand toward the hill pasture. "Lay there in a pile, 's ye might say—hull five of them. Got them skinned a'ready, me and my wife have. Wife is quick at butcherin', I can tell ye—mighty nigh 's handy at the job as I be."

"But," Jimmy began, "how could —"

"You can go up there and see the hides and the carcasses for yourself," Old Mark went on quickly. "The hides, they look pretty bad; storm blew 'em so full of leaves and dirt—ye wouldn't believe it, hardly. It's a bad job, bub, but your folks can see that you weren't a mite to blame. I'll sell the hides fer what they

SEVERAL TIMES THE DOG STOPPED AND
LOOKED BACK

will bring and send your uncle every cent—no charge for my work. He'll see that Old Mark ain't small about such things. Now come on in and we'll have some breakfast."

As Jimmy Downs trudged down the James crossroad that afternoon he was sorely troubled. After the first keen feeling of loss and disappointment that had overwhelmed him when Old Mark told him the news about his heifers, other thoughts had begun to take shape in his mind. Were the dead heifers his pure bred? He could not be at all sure from looking at the hides, for they were covered with the dirt and debris of the storm. He had lingered at the farm as long as he dared, hoping to find some definite proof that Marcus had deceived him; but at last he could find no further excuse and had had to depart.

He had not gone far on the road, however, when the actions of Bitters confirmed his suspicions. Several times the dog stopped and looked back toward James's pasture, and then gazed questioningly into his master's face. At last the boy stopped by a clump of bushes.

"We'll just wait right here till night, Bitters," he said, "and then we'll see what we'll see."

As soon as it was dark he went quietly back to the big pasture into which the heifers had been turned the evening before, and stopped in the corner near the road. On one side lay the great silent pasture; on the other a strip of woodland lay sombre and dark.

Here he waited until the lights were out in the farmhouse. Then he slowly took down a length of the pasture fence, while the collie, intensely alert, watched every motion and gazed into his face with keenly understanding eyes. The boy paused a moment, looking squarely at the dog.

"Go get the heifers, Bitters," he said quietly, but confidently. "Go get them, sir."

Instantly and without a sound the collie disappeared in the darkness. With a sudden feeling of loneliness and apprehension the boy seated himself on the old rail fence. If the heifers were still alive and in the pasture, he believed that, notwithstanding the wide sweep of the great tract that stretched far back on the hills, the dog would find them. Were they still alive? And if they were alive, was Marcus James guarding them?

Listening and watching, he waited for a full hour. Twice he started expectantly, only to find that the objects looming up in the dim light were cows that belonged to the James herd. Another hour passed without a sign of any living thing, and the only sound that came to the boy's ears was the plaintive sighing of the night wind in the hemlock woods across the road. He shivered, partly with cold, but more with an ever-increasing apprehension.

Had he made a mistake? Had he now lost not only the heifers but also his one best friend, who never yet had failed him? For he knew well that, barring death or a trap, the little red dog would come back to the gap in the fence—joyfully and alert if with his charges; if without them, with drooping head and tail. But come back Bitters certainly would—if alive.

Jimmy suddenly sprang up, alert. Surely he had heard—not from the great pasture but apparently from the woods across the road—a low, anxious whine. He listened breathlessly. Could it be the collie—in that direction? He whistled softly, and instantly there came again—he was sure of it now—the low whine of a dog in trouble.

It was quite dark now, but Jimmy plunged into the hemlocks. The belt of woods proved to be thin, with another great pasture stretching far back beyond it. As he crawled through the old brush-and-rail fence he was almost upset by the eager rush of a panting dog that threw himself upon him in joyful welcome. The collie was wet and bedraggled and panting hard, but his ears were alert and his tail was waving proudly.

The boy could only guess at the miles that the dog had traveled, at his patient search here and there, at the almost uncanny intelligence with which he had followed the trail, but he knew even before he turned to the little group huddled close to the fence that the heifers were there, every one. Silently but surely the dog had brought them as near as possible to the designated place. He had not been able to find an opening in the stout old fence, and so he had whined to attract his master's attention.

"Bitters, oh, you Bitters!" Jimmy said, and with something very like a lump in his throat he flung his arm round the dog's neck.

At the first faint whitening of the eastern sky the little herd was again on the road. The boy was in great haste now to get as far as possible from the premises of Old Mark James. So thoroughly did he now distrust the man that he doubted seriously whether the animals under the tree had been killed by lightning at all. Doubtless the old schemer knew the value of pure-bred stock as well as anyone.

The sun was just rising over the hill as the boy neared the Wilder farm at the end of the crossroad, and he now heard the gruff "Co-boss! Co-boss!" of some one calling the cows to the pasture bars. The sound cheered him greatly; but the next moment his heart sank and he felt a shiver of dread, for he had heard behind him the quick pounding of feet—the sound of a horse coming at a gallop. He turned and saw Old Mark, red with anger, plying the whip furiously.

"Look here, you young whelp!" the man shouted as he came up. "What do you mean by running off my cattle? I'll show —"

The boy's face was white, but he stood his ground.

"They're not your cattle, Mr. James," he said, "and you know it! They're —"

"I'll show you whose they be!" broke in the man, with a volley of oaths.

"And I'll show you another thing. You get these cattle back, right now, or —"

He strode angrily toward the boy and raised the heavy whip as if to strike.

"Go slow, Marcus," broke in a drawling voice. "Go a little slow."

Jimmy Downs turned with a gasp of relief. A big man, broad of shoulder and ample of girth, stood squarely in the middle of the road, quietly chewing a blade of grass. A bushy red beard covered his face, and he had a pair of keen gray eyes. He glanced at the boy with a twinkle, and turned again to James.

"You're out early this morning, Marcus, and talkin' pretty loud, seems to me!" the big

slow, confident voice boomed out again. "What's the row, anyway? Let's hear about it."

"Row!" shouted Old Mark, with his face redder than ever. "Row's just this: this young scamp is trying to run off these heifers of mine in the place of some he had killed by lightnin' over in my pasture night before last. But I rather guess not, I do. I'll show him!"

Again he raised the whip angrily. But the big man quickly stepped in front of the boy.

THE ONLY SOUND . . . WAS THE PLAINTIVE
SIGHING OF THE NIGHT WIND IN
THE HEMLOCK WOODS

"No, Marcus, no!" The big voice was still slow, but the words somehow carried an ominous ring, and the keen eyes flashed into the face of the man on horseback with a look that bore only one interpretation. Then he said to Jimmy, "Let's hear from you, son."

Feeling that he had found a friend in need, Jimmy Downs told his story promptly and without hesitation. "And I can prove every word—give me time," he added eagerly.

The big man nodded slowly and motioned up the road. "The boy's going on with the heifers, Marcus—and you're going to let him alone," he said quietly. "Redfield Barnes is good for the cattle, I'll guarantee that; and you can come back—if you want to," he added meaningly.

Old Mark slowly turned his horse. "I'll fix you for this, Dave Wilder!" he said, choking with anger. "I'll fix you for this!"

"Well," said David Wilder, with his slow smile, "it won't be the first time you and I have locked horns, Marcus." And he turned to follow the boy.

As he came up with him, he laid a big hand on his shoulder and, looking down into the boyish face that was still pale and pinched from anxiety and weariness, said, with his quizzical smile:

"It takes a pretty cute hand to beat Old Mark James, son, but I guess you've done it this time—you and the little red dog. I shall tell Redfield about this myself, I shall. Now you go right up to the house and get a good big hot breakfast—both of you."

"Ploughin' time's here again, Jimmy."

As he addressed the boy, Redfield Barnes pointed toward the creek meadow below, where the first green of the early spring was starting up invitingly. The gray team, driven by one of the farm hands, was turning the first smooth furrows. Followed closely by Bitters, Jimmy Downs was crossing the yard with a little pail of salt for some specially fine-looking young cattle in the pasture near by. At his uncle's words he stopped in surprise.

"Why, I didn't know you were going to break up the creek meadow, Uncle Red! It's the best of the farm, isn't it?"

"I calculate 'tis, Jimmy, the very best. It's for potatoes—'bout an acre of it. Thought maybe you'd like to plant it—all for yourself. It'll raise two hundred and fifty bushels, I shouldn't wonder. Thought maybe you'd like to buy a colt or something bimeby—boys do, sometimes."

Jimmy's face lighted up eagerly, and then, as his eyes rested on the stony hill pasture, as suddenly fell.

"I'd like, Uncle Red, I'd like to awfully; but if I do an acre on the hill for Bitters, I —"

"What's that—Bitters?" said Redfield Barnes quickly. "Well, I've been thinking 'bout that, and I'll tell ye now." He stooped to stroke the soft ears of the collie and perhaps to hide the emotion in his face. "I'll tell ye now, you won't have to tend any potatoes in the hill pasture—or anywhere else—on account the little red dog, not just now—in fact, not ever, Jimmy. No, you needn't say nothin'. I don't want any 'thank you's'. The dog's paid for his keep."

"YOU'RE OUT EARLY
THIS MORNING, MARCUS"

THE next morning, when Greiner got up and went out to wash his face and hands, Ted was finishing at the basin. The pail was empty; so Greiner started up the street with it, to fill it at the hydrant. In front of their tents the members of other squads, who were washing or completing their dressing, looked at him and laughed.

"Hi, Corporal Greiner!" said one, grinning at him good-naturedly. "You and your squad overslept, I guess. Not up at your usual hour."

Greiner, instead of making some amiable response, marched by in silence, very much on his dignity. While he was filling his pail at the hydrant, some one farther up the street called, "All out, fellows, for Corporal Greiner!"

The cry appealed to the humor of the company and was taken up in tent after tent. "All out, fellows, for Corporal Greiner!" And out would come the occupants of the tent, half dressed, to laugh and gibe at the unfortunate corporal.

Greiner had started back with his well-filled pail, when some wag had the inspiration to shout, "Attention, B Company, and salute the corporal!" Immediately the idea became popular; all along the street the cry was repeated, "Attention, B Company, and salute the corporal!" And all along the street in front of their tents the fellows came to attention,—except that they did not "wipe off" the smile,—and each one raised his hand in salute when Greiner passed. To be the focus for the wit and humor of the company was not the kind of eminence that Greiner craved; the expression of his face betrayed his stern displeasure while he walked down the line. The annoying fact, of which he was fully conscious, was that a man cannot look impressive and dignified while carrying a brimming pail of water. If he had had his rifle over his shoulder, he could have defied the ridicule more successfully; a feeling that the crowd had taken the most unfair advantage possible enraged him.

He arrived at tent 26 to find all the occupants standing at attention and saluting—even Carton. Gray was the first one on whom his glance fell—Gray, grinning, derisive, the hateful rival, the author of all his woes; and upon a sudden, uncontrollable impulse Greiner hurled the whole drenching pailful against Gray's face and chest.

Gray choked and sputtered and then made a rush. Greiner parried his blow; the next moment the two combatants had clinched and were rolling over and over in the middle of the street. They were pretty equally matched in point of strength, and the struggle between them attracted and fascinated a crowd of spectators that rapidly increased in size. But the issue of the tussle was still in doubt when Lieut. Wharton came hurrying down the street, pushed his way in among the spectators, and addressed the struggling pair on the ground in stern and angry tones:

"Get up, both of you! Get up at once!"

Neither Gray nor Greiner ventured to ignore that command. They released each other and stood up, a sorry, disheveled, dirty-looking pair.

"What do you mean by rolling round in the middle of the street like two nasty little gutter-snipes?" demanded Lieut. Wharton. "If you have a difference to settle, go off in the woods and settle it with your fists, like men. But don't you dare to carry on this brawling in the camp. You ought both of you to be put away in the guardhouse for twenty-four hours, to cool off."

The lieutenant let his contemptuous eyes travel slowly over the person of each combatant.

"Go and get cleaned up," he said.

Greiner took the empty pail and walked off again toward the hydrant. Gray went into the tent and muttered his indignation to Ted while he changed his shirt.

"Just like Wharton—bawls out the innocent just the same as the guilty! I'd like to know what he'd have done in my place—turned the other cheek, I suppose!"

"Well," said Ted, "I suppose he couldn't wait to find out which of you had started it—he just had to put a stop to the row. Of course he couldn't allow such disorder in the company street. I guess he won't hold it up against you."

"I don't care whether he does or not. He's nothing to me. No boob corporal, or lieutenant either, for that matter, is going to douse me with a bucket of water and get away with it!"

"That's all right," said Ted. "But you don't want to spoil your record; here you

THE PLATTSBURGERS

By Arthur Stanwood Pier
In Ten Chapters Chapter Eight

have started out to be the crack shot of the company, and it would be a pity for you to give yourself black marks in other ways. You'd better just try to rub along with the corporal as peaceably as you can."

"I'm peaceable enough!" grumbled Gray. "But I'm not going to let him or any other man try to drown me and get away with it."

Ted felt reasonably sure that, unless there was further provocative action on Greiner's part, Gray would not insist upon renewing hostilities. He felt still more certain that there would be no further encounters when, after breakfast, he saw Meade and Carton and Adams holding a conference with Greiner at the end of the street. They all were talking to him earnestly, and Greiner was listening in silence.

When B Company fell in to march to the target range, the sun was high; for more than two hours the sound of popping rifles had come to their ears while they had sat on a bank and heard a talk by Capt. Hughes on

bank and scowled at him with disapproval. "Now, you've given a very good illustration of how not to do out-guard work," said the lieutenant in a severe voice, which was loud enough for the whole company to hear. "You've come back to the main body walking in plain view most of the way. You've not only afforded a good target to the enemy, but you've betrayed to them the position of the main body. It's of the most vital importance that patrols should keep under cover and in retiring should not disclose the position of the main body. Your own life may be comparatively valueless, but you must remember that your regiment counts for something."

Having thus served as an unfortunate object lesson to his comrades, Ted was permitted to sit down and rest. In a few moments Greiner and the others of the squad appeared. They had worked through the cornfield and up the gully, keeping themselves well hidden all the while; and because of that fact Lieut. Wharton expressed his satisfaction.

his belt for a clip of cartridges, the sixteen targets rose out of the ground. Ted crammed the clip into the magazine of his rifle and hastily sprawled at full length. He had to shoot without the advantage that he had received in the slow fire, of having the result of each shot immediately demonstrated. He was not sure whether he was firing wide of the target or not, and the uncertainty worried him. He finished with the first clip, jerked the second clip out of his belt, and tried to press it into the magazine. He started it in crooked and it jammed. He worked over it madly, feeling that the seconds were flying past, but his efforts were vain until the soldier took compassion on him and gave him a hand. Then the clip slid into place, and hurriedly Ted took aim and began to shoot. After he had finished, the target remained in sight for some little time before it sank, as it were, into the earth.

"You see, you had plenty of time," said the soldier. "If your piece jams on you, the thing to do is not to get flustered."

The target rose into view again, and Ted watched eagerly while the marker pointed out the result of his shots. Two fives, three fours, three threes—and then the red flag was waved twice.

"Probably missed because you got rattled and hurried yourself," remarked the soldier. "Still, you didn't do so bad."

Ted went back to the scorer's table and got his card on which the total, thirty-one, was

entered. He rejoined the squad and before Stevens began to shoot had figured up his average. It was still high enough to qualify him for the marksman class, if the next three trials did not reduce it.

Stevens did even better than on the preceding day and turned in a score of forty-five.

"Well, Steve," said Gray, with his irrepressible desire to irritate the corporal, "I guess it's you that will be high man to-day."

Greiner had a look of determination on his face when he went forward to shoot. The members of the squad watched for the result with keen interest. Six bull's-eyes were indicated, three fours and a three—forty-five in all. As after the first test, Greiner came back fuming.

"There was no need at all for me to have got that three," he declared. "I hurried my last shot—pulled it off to the left."

"Still, you did pretty well," Gray said consolingly; "you tied Stevens. Maybe no one will make a better score. Then you'll be able to feel terribly proud of yourself."

This satirical sympathy incensed Greiner. "I hope for your own sake you don't make a better score," he said. "I've never seen a head grow in size the way yours has done since yesterday."

"Awfully good of you to be worried about it, old top."

Bradford and Ted smiled; Stevens laughed outright, and in an effort to make peace said:

"It's no use, Greiner, old man. He's got to have the last word; you can't beat him out of it."

"He'll get beaten out of something," said Greiner, so angry that his words were meaningless. "Now, let's keep still and watch these fellows."

Ted glanced at Stevens and imagined that in the faint smile that he observed there was an echo of his own feeling. There was no use in trying to help Greiner through any situation; he was too obstinate and too proud.

Carton, Adams and Howland all made mediocre scores, as on the preceding day, and Bradford shot even more wildly than before. His face was rueful as he returned after seeing the red flag waved four times.

"I certainly do hate a gun," he remarked.

Gray began to shoot, and while he was at work the members of the squad looked on in silence. When he had finished and the target had gone down, Greiner could hardly conceal his anxiety. He sat cross-legged, with his rifle across his knees, watching intently for the target to reappear. It rose, and the marker proceeded to point out the hits: one bull's-eye, two bull's-eyes, three bull's-eyes, four bull's-eyes, five bull's-eyes,—Greiner plucked nervously at the grass,—six bull's-eyes,—Greiner sat rigid,—seven bull's-eyes,— "A perfect score, I'll bet!" muttered Ted,—eight bull's-eyes,—a dull flush bathed Greiner's cheeks,—and last of all, two fives.

"Good boy!" exclaimed Stevens, as Gray returned and joined the squad. The others,

DRAWN BY NORMAN ROCKWELL

THE NEXT MOMENT THE TWO COMBATANTS HAD CLINCHED AND WERE ROLLING OVER AND OVER

outpost and advance-guard duty, and then had been given a demonstration of the duty and work of outguards. For this, Squad 16 had been one of the two squads selected. Squad 15 was established as a sentry squad behind a clump of trees on a ridge overlooking the road; two men of the squad were posted in observation, while the other six were told off as patrols. Squad 16 was sent forward to furnish a Cossack post on a knoll beside the railway, and patrols to cover the cornfield and pastures lying between this and the ridge on which the sentry squad was posted. The whole sector thus covered was about a mile in length.

From their place on the edge of the ravine, the other members of B Company could see the individuals of the squads selected for the outguard duty making their way along stone walls, crawling through fences and disappearing behind barns and farmhouses. The enemy was supposed to be advancing along the turnpike and the railway, and at the first discovery the outguards were supposed to fall back on the main force. Discovery was signaled by the captain's sounding the company call.

Ted, who had been ordered to conceal himself in the cornfield at a point where he could command a view of the railway for several hundred yards, tried to obey instructions and rejoin his squad without emerging from cover. He went crouching and skulking among the cornstalks, stumbling in the loose, dry soil, sweating under the heavy pack, and at last came out on the edge of a gully that led up to the big ravine on the top of which the company was stationed. He could not see any of the members of his squad, and concluded that they must have preceded him. So, quite unthinkingly, and feeling there was no longer any necessity of concealment, he emerged from the cover of the cornfield, walked along the edge of the gully, and at last clambered up the bank of the ravine and rejoined the company.

Lieut. Wharton met him at the top of the

"That's a good piece of work, Mr. Greiner. One of your men got away from you and came strolling along in the open, as if he was promenading in the park; always make sure that every member of your squad understands the instructions. All right, now; fall in!"

Owing to the praise that he had just received, Greiner recovered in large measure the self-assurance that had been shaken by the rebuke of the morning; and he was so elated that he neglected to call Ted to account for having blundered. He was, however, snappy and on his mettle during the march to the target range, and lifted his voice from time to time to correct some individual ahead of him who was careless about following in file.

The target practice on this morning was at the two-hundred-yard range—rapid fire, from the prone position. A brisk wind was blowing across the range. Capt. Hughes advised the men to take half a point windage—that is, move the wind gauge half a point toward the direction from which the wind came.

"You'll have two minutes in which to get off your ten shots," said the captain. "That's a longer time than you'll think. The chances are that most of you will hurry your shooting unnecessarily. Each man will receive two clips of cartridges and will at once put them in his belt. Don't touch them until you get the order, 'Load!' Now, then, two men from each squad take their places on the firing line."

From Squad 16 Ted and Stevens advanced, gave up their score cards and received the ammunition. Ted was about to throw himself on the ground, but the soldier at the firing point checked him. "Not till after you load," said the soldier.

There were no targets visible—only the numbers designating the targets were displayed. After a moment of nervous waiting Ted heard the officer in the rear shout through the megaphone, "Ready on the right! Ready on the left! Ready on the firing line! Load!" At that instant, while Ted was kneeling in

all except Greiner, had some word of praise and congratulation, and crowded round to shake hands with him.

"You're even better at rapid fire than slow fire," Ted said, marveling.

"I guess it must be easier, if you once get going right," Gray answered.

"I bet you'll be top man again to-day," declared Bradford.

"Oh, I trust not!" said Gray. "Greiner is simply overflowing with pity for me as it is."

"Fix your slings and get all ready to march," said Greiner, feeling that he must say something, and not able to find words to express what was in his heart.

The company was beginning to assemble a little distance behind the firing line.

"Squad fall in!" commanded Greiner. "Follow me."

"I say, Greiner, old top," said Gray, "if I may make a suggestion, wouldn't you order inspection arms?"

"Squad halt!" Greiner faced his men with a glitter of wrath in his eyes. "Attention! Inspection arms!" There was the obedient rattle of the bolt. "Port arms!" Another obedient rattle, and the click of the trigger. "At trail. Follow me."

When he had marched the squad back to the point where the company was assembling, he turned and said to Gray in a savage undertone:

"After this drill is over, I'm going to take you outside the camp and lick the tar out of you."

"You won't need to take me," Gray replied. "I'll go with you with pleasure."

Bradford, standing next to Gray, overheard the exchange and reported it to Howland, who passed it on to Adams; and before Capt. Hughes had called the company to attention everyone in Squad 16 knew that Greiner and Gray were going to settle their differences with their fists.

During the march back to the camp Stevens discussed the situation with Ted. They agreed that an effort to prevent such a discreditable episode as a fight must be made. But when the company had been dismissed and the members of Squad 16 had stowed away their packs, Greiner said to Gray:

"Now, Gray, I'm ready for you."

The pair left the tent and started off toward the woods beyond the camp. Stevens immediately followed and called, "Gray, just a moment! Let me speak to you a second!"

Gray came back reluctantly; Stevens linked arms with him so that he could not escape.

"Look here," Stevens said. "You and Greiner have got to call it off. It won't do either of you any good to pound each other's faces, and it's bad for the squad to have you two quarreling all the time. I'm not saying Greiner isn't to blame, but you know you are impertinent to him all the time, and you've absolutely got to treat your corporal with respect."

"How can I?"

"You've got to. It makes no difference that you don't like him. He's your corporal, and in the field and at other times it's your duty to suppress your personal feelings."

"I admit there's something in what you say; but I'm not going to let him think I'm afraid to fight him."

"He won't think that. Here, come along with me while I talk to him."

Gray followed Stevens reluctantly; he was unwilling that Greiner should think he was welcoming intervention. But he need not have been apprehensive; Stevens dealt with the situation tactfully.

"I've butted in on your little arrangement," Stevens said. "I've been trying to get Gray to call it off, and now I want to persuade you. It won't do the squad any good to have you two come out of the woods in half an hour with bloody noses and black eyes. With the shooting we're doing, there ought to be a good chance of our squad's winning those cups. A row in the squad will prejudice the captain and the lieutenant. For the sake of the rest of us you two ought to bury the hatchet."

"If he wants to apologize for his insolence, I'm ready to accept his apology," Greiner stated.

"Apologize nothing!"

"Now, hold on," Stevens interposed quickly. "You two will have to meet each other half-way. Gray has admitted to me, even if he won't to you, that he's been too fresh. At the same time, I'm bound to say that in my opinion you've been to blame just as much as Gray. You started in by trying to show your authority, and you antagonized all of us. Now, the thing for you both is to do the best you can to pull the squad together; and you'd better begin by agreeing to overlook past mistakes. You can be just as cool as you like to each other; you don't need ever to speak to each other; but it won't do for you to keep up your bickering, and it certainly won't do for you to try to pound each other to a pulp."

At that moment the assembly call for mess sounded.

"There," said Stevens. "What you both need is to feed, not fight."

Greiner looked irresolutely at Gray, who preserved a fathomless expression of nonchalance.

"Well," said Greiner, "there's something in what you say." He started toward the head of the street, where the men were falling in.

"But," he declared truculently, "there's one thing I won't stand for, and that is his calling me 'old top.'"

"I know, I know," said Stevens hastily, fearful lest Gray might on a perverse impulse reply by using the objectionable epithet. "I've

told him that he simply mustn't show disrespect to his corporal. He understands."

"I get you, Steve," said Gray. And that was as near as he would come to making an apology to Greiner.

TO BE CONTINUED.

THE GRIM RAIDER

By Archibald Rutledge

I DON'T know what's doing it, but if it doesn't stop I'm ruined!"

Ben Loftus had been calling up his drove of Tamworth shotes and counting them as they came running with squeals of eager anticipation. Some galloped down the dusky path on the old river bank, and some out of the waste field of wampee and marsh. He had been calling for half an hour, and he knew that all the hogs on the island must now be before him. When he had brought them from the mainland two months before, there had been seventy-five; now there were only sixty.

The young planter realized that a few might have died from common causes; but he also knew that there must be something at work on his drove, something that was taking a shote every few days. He had brought them to their summer range as weaned pigs, and he thought it probable that wildcats had taken some while they were small; but now that they were better able to take care of themselves another raider must be responsible. Loftus was sure that it was not a human thief. What, then, could it be?

As the shotes ate the corn and the cut sweet potatoes that he was scattering, a young sow came limping down the bank. When she neared the drove, instead of mingling with the others, she lay down beside a little birch tree. She would not touch the feed that Loftus threw to her, and she did not try to move when the planter went over to examine her hurts. They were many and deep: there were broad lacerations that looked as if they had been made by some blunt-toothed weapon. There was evidence, too, that the struggles of the captive to escape had widened the wounds.

"She's badly hurt, but she'll get over it," the planter said to himself. "And there's only one thing that could have caught her—the same old marauder that has caught fifteen others, and will get every one of these if I don't get him first. It's nothing but —"

The words were taken from him by a low, moaning sound that swept over the vast, level sedge field and increased in volume and intensity until it became a sullen roar—grim and terrible, weird with the wild menace of death in it, challenging in its insolent savagery.

Some of the Tamworths on the edges of the drove marked the sound and, lifting their heads alertly, winded the danger-tainted breeze from over the marsh. Sharp lights were in their eyes; and their attitude showed that they realized the presence of something familiar and dreaded.

"A bull alligator," said Loftus; "and, judging from the bass solo that he can sing, he must be a monster. Either I get him or he gets all my Tamworths and my year's work comes to nothing."

The young planter had paid a year's rent for the lonely island, which lay in the river opposite his place on the mainland. He had invested a good sum of money in the Tamworth drove, and every shote that he now lost meant a clear eventual loss to him of twenty dollars or more. He had no place on the mainland that would serve as a summer range for his drove; besides, he did not want to lose the use of the island. It was a fine place for raising hogs—except for the presence of this grim raider.

After he had finished feeding his drove, the planter made up his mind to walk round to the back of the island, whence the roar of the bull alligator had come, to find if possible the monster's range and haunts. The bull would make his home, Loftus knew, in the river; but there might be a ditch or a canal leading into the island that the alligator used on his marauding expeditions. If the planter could find such a place, he would know where to lie in wait for a shot. Besides, he was eager to see the robber; but he did not want the alligator to see him, for that would make the beast wary.

Loftus made his way thoughtfully along the old river bank, past whispering canebrakes

and dense jungles of blackberry vines. Along the muddy slopes of the bank he saw the tracks of many wild creatures—minks and rabbits, raccoons and wildcats. When he came to a point on the island opposite the place where he had left his herd, he moved very cautiously; for it was from near there that the roar of the great bull had come.

At one place the old bank that years ago

IN THE EXCITEMENT OF THE MOMENT LOFTUS MISJUDGED THE DISTANCE ... AND STEPPED TOO NEAR

had separated the rice field from the river had given way, leaving a muddy crevasse with sloping sides and a treacherous bottom, through which trickled a dingy stream of water. A glance showed Loftus that the alligator could easily use this as a "crawl" from the river into the canal, which ran deep into the old field where the hogs were accustomed to feed. Presently the planter went down to where the drain entered the river; and there in the mud he saw great bear-like tracks leading up out of the river, and marks where a huge scaly body had dragged itself toward the crevasse.

Looking from the river to the old canal, Loftus wondered whether the alligator could even now be in the rice field. Even as he pondered the situation he heard a rush and flounder in the waters of the canal, followed by a hog's squeals of fright and pain. The cries were quickly smothered, and Loftus knew that the grim raider had taken another victim—a straggler that had not come up to feed with the herd. And the monster had done his work within rifle shot of where the planter stood.

The tide was at the low ebb, and there was little water in the canal. Loftus felt sure that the big alligator would not remain there with his kill, but would return at once to the river and plunge with his prey to some subterranean haunt where he could devour the shote at leisure. The planter therefore ran from the river; he had no sooner reached the crevasse than he saw the big reptile coming down the canal, grotesquely wading where the water was shallow and swimming through the deep pools. Gripped in his great jaws was one of the planter's Tamworths, a young, red sow that had been of unusual promise.

The bull alligator had set his head for the river; moreover, his recent kill had awakened his consciousness of power. Between him and the river Loftus now stood, alone and unarmed, but grimly determined not to let the great reptile escape. The planter had stripped off his coat and had armed himself with a stout oak cudgel.

When the raider first saw Loftus, he paused craftily; but it took him only a moment to decide that there was only one way out, for now he came steadily on. He was trapped in

the canal, and the water was running out all the time. He must have known that he was facing a battle, for, with a deft movement of his formidable head, he tossed the dead shote out of his jaws. He was thus stripped for action, and like some dread chimera he came onward.

Loftus knew that when an alligator sights an enemy between him and the safety of his river haunts, he will not change his course, although his enemy be man. It was a dangerous feat that the planter was undertaking, but for all he could tell he might never again have such a chance at the marauder.

Loftus chose his footing carefully, where the mud was shallow and the subsoil quite firm. He knew that he should have to avoid the dread strokes of the bull's massive tail, as well as the powerful jaws. And now he waited for the monster to come.

From the moment when the alligator had tossed his prey aside he had not paused in his course, but had advanced slowly and steadily down the canal bed. He was only ten feet away when his formidable head rose over the hump in the crevasse that marked the line of the old bank. Nor did he then pause for the man who blocked his path; his cold eyes were on the broad river, now in full sight.

"If I can't kill him," Loftus muttered to himself, "I'm going to hit him on the head once for every Tamworth he's killed!"

The great reptile cleared the mound in the crevasse and, opening wide his cavernous jaws, came waddling forward grotesquely, like some huge dragon, straight toward the planter. Gripping his club with both hands for a powerful blow, Loftus at the right moment swung the knotted cudgel upward and brought it down with all his force on the blunt black nose of the alligator. The reptile's jaws closed convulsively and the bulging eyes blinked with the force of the shock, but he did not falter in his course. His broad, malignant head turned somewhat, and Loftus saw that he was trying to get his lashing tail into play.

Again and again, until his hands tingled from the jar, the man struck the bull over the head; but the alligator, although he was plainly weakening, continued his flanking movement. In the excitement of the moment Loftus misjudged the distance controlled by the sweep of the alligator's tail and stepped too near. In an instant he had been hurled violently into the crevasse,

straight in the path of the infuriated bull, which now, with jaws wide and with cold eyes gleaming, rushed down on his prostrate and helpless victim. The planter tried to struggle to his feet, but the blow had almost stunned him. He gasped, half rose, and put up his arm to protect himself; but the alligator, maddened by the blows he had received, was upon him.

Loftus still grasped the oak cudgel; and now, when the breath of the bull, which was like the breath of death, was in his face, he suddenly lifted his weapon and thrust it into the reptile's cavernous mouth. Instantly the grim jaws closed with a hissing sigh, and the stout oak limb was sullenly ground by the beast's great molars; but when the alligator found that the club was not flesh and bone he relaxed his grip, and Loftus jerked the weapon out.

The bull's momentum had brought him into such a position that his huge head was now parallel to the prone body of the man. Weak and dazed as he was, Loftus managed to get one arm about the monster's neck and to draw himself up on the alligator's back. In that position, precarious although it was, he was safe from both the lashing tail and the terrible jaws. The alligator, seeming to know that, increased his pace toward the river, which was now only twenty feet away. Desperate from fear that his prey was escaping, Loftus summoned all his reserve of strength and, lifting the club once more, struck the bull between the eyes. The monster gave a great convulsive heave and shudder that flung Loftus from his back. In another moment the waters of the river had closed over the huge scaly form of the grim raider.

Picking himself up, the planter leaned against a cypress tree and looked over the river for another sight of the bull. But the monster did not appear.

"I believe I win," Loftus said to himself, "for after the drubbing I gave him it will be a long time before he comes into this canal again."

The planter was right. The raiding ceased, and the Tamworths came unmolested to their maturity; and never again was the island haunted by the destructive monster.

AND DOWN THE RIVER
GLIDES THE BIRCH CANOE.

FACT AND COMMENT

MORE foolish words are spoken in earnest than wise ones in jest.

The Trumpet Note of Fame a Hero heeds
But as a call to do still nobler Deeds.

TO double your troubles and lessen your friends, talk about them.

NO wonder that neutral Norway is in anything except a neutral mood! Since the German U-boat campaign began, a fourth of the Norwegian merchant tonnage has been sunk—about 450 vessels out of 2630—and many lives have been lost.

EVERY war puts a heavy burden on the women who wait and work at home, but there was never a war that gave the women a more direct and vital work to do than this war gives the women of America. That work is to prevent the waste of food.

TO indicate some of the difficulties that our language presents to foreigners, a subscriber sends us this: "I sat on the bough of a tree and began to cough, having some dough in my mouth and my feet in a trough. I was not thoroughly tired, though roughly used. Wasn't that tough?"

IT is an unexpected although really a logical development of the war that the nations of Europe should join the United States in making May 30 a day of special honor to their soldier dead. The beginning that was made this year is likely to grow into a world-wide observance of the day in years to come.

AN ironical turn of the wheel of fortune gives Belgium a slice of the German possessions in East Africa that is three times as large as Belgium itself. The region, which has been occupied by Belgian troops under Gen. Tombeur, offers a most advantageous outlet for the commerce of Belgian Congo. Of course the new possessions do not go far to offset what Belgium has suffered at home, but they are something on the other side of the ledger.

WHEN anyone repeats that worn-out gibe that the mighty dollar is the American god, we can at least console ourselves with the knowledge that not all who judge us from the outside accept it as deserved. The Marquis of Crewe, for many years the leader of the House of Lords, said when the Peers commemorated the entry of this country into the war:

I question if there ever has been a community which has so steadily pursued high ideals, which has so conscientiously been swayed by serious impulses, and which has been so uniformly dependent on moral sanctions, as the United States of America.

THE two German raiders, Kronprinz Wilhelm and Prinz Eitel Friedrich, seized by the United States government and now in our naval service, will continue to bear German names, but they are names that Americans will always hold in the highest honor. One becomes the Baron de Kalb and the other the Baron von Steuben. Baron de Kalb, a German officer who had fought for France, came to this country with Lafayette. He was wounded many times and died a prisoner of war. Baron von Steuben, a former aid of Frederick the Great, was one of Washington's most trusted officers, and was known as "the drillmaster of the Revolution."

CORN-MEAL bread, the wholesome food of early days when the settler threw a bag of corn across his saddle and rode to the nearest gristmill, is likely during the coming year to become well known to millions who have hitherto been little familiar with it. Although we have called corn the king of our

crops, it has been relatively little used for food in this country except in the South. The Indians knew its virtues; the Mexicans know them, and among the Europeans so do the Italians. But statistics show that recently the ordinary American has eaten yearly three hundred pounds of wheat flour to fifty pounds of corn meal and other corn products.

THE MISSIONS

WHATEVER hopes were entertained in Europe or in America of benefits that would accrue to the general cause from the visit to this country of distinguished European statesmen and soldiers were fully realized and even exceeded. It is not conceivable that any other step could have accomplished more than the memorable joint mission has accomplished, because the success of the mission has been perfect and complete.

Without straining probabilities, it may be surmised that the revelation to France and England of the true feeling of the American people was the most important result attained through the visit of the commissioners.

The envoys certainly regarded it as their chief duty to give such advice as we might ask for concerning the activities in which we can be most helpful, the best form of the help we can render, the errors into which we might most easily fall. Those duties are diplomatic, military, naval, financial and industrial, and to them the envoys gave most serious attention. But the American people saw in the missions more than their purely practical aim. Here was the military hero who had saved France and the cause that we have adopted as our own, the statesman who had led the House of Commons and who had governed the vast British Empire during eventful years, the deputy premier of France; here were the governor of the greatest bank in the world, other public men of eminence, and soldiers and sailors, all representing the same cause. The American heart thrilled with admiration for the men, with pride that they had come to us, with enthusiasm and patriotism and gratification that we could at last range ourselves beside them, in counsel, in active service in the field, in policing the seas. The people have shown by all their words and actions how deeply they are touched by the significance of the missions.

Wherever the envoys went they were received with almost unexampled expressions of regard and affection. When they spoke they expressed sentiments that found an instant and hearty response from their hearers. Limited as were their tours, few as were the cities they could visit, their presence and their words have pervaded the whole land, united the people and roused the spirit of patriotism within us as perhaps nothing else could have done. No man can estimate the importance of the reflex influence of that mighty work upon the nations that for three years have been bearing the burden of the war.

We are now sending a similar mission to the new Russian republic—similar because at the head of it goes a great statesman of the United States. May success attend it! We cannot help having misgivings; for although our envoys are eminent, and although we are confident that they will perform their duties with skill and discretion, there must be doubt of the stability of the present Russian government. Let us hope that our mission to Russia may be as brilliantly successful as the missions of our brave allies to us.

OUR TROOPS GO TO FRANCE

WITH the registration of the ten million young men from whom the new national army is to be drawn, the mobilization of the entire National Guard and the designation of a division of regular troops for immediate service in France, the United States has given earnest that it does not mean to enter the war merely as banker or commissary for its allies, but as a real belligerent. Its man power, if fully called upon, must in the end exert a tremendous, perhaps a decisive, influence upon the actual fighting, but that power cannot be very extensively employed this year, since the necessary processes of training and equipment will occupy most of the months that are suitable for campaigning in the field.

But the flag is to go to the front at once. One army division, and very likely more as the summer goes on, will be dispatched to take a place in the battle line. We shall have our share, even if it be a small one, in the great war in behalf of freedom and the rights of man. How much material assistance we shall give to our allies is not clear—some at least, although

perhaps not much. But it will cheer and hearten them to see our soldiers fighting at last beside their own; especially it will encourage our sister republic, France, which has so spent itself materially and spiritually in the struggle. The sight of the Stars and Stripes floating beside the Tricolor in the trenches will double the value of the small expedition we shall send.

It will be a wonderful experience for the men of Gen. Pershing's division. They will be welcomed as almost no other band of soldiers was ever welcomed, for their presence in France will have a significance that it is impossible to exaggerate. They carry with them America, a world power at last, forced out of its comfortable isolation by the peril of its sister nations; they carry with them the pledge of the oneness of the New World with the Old, and of its determination to do its part in defending civilization and democracy. It will be a historic moment when they disembark on the shores of France, and every American's heart will beat more proudly when that moment comes.

DRILL FOR EVERYONE

AMONG the gleams of hope in this terrible war is the prospect of military drill for the young, and indeed for all. In England, where the work of the war has at last been most superbly organized, much stress is laid upon military drill for the women who offer themselves for service. Those who enlist under the "Voluntary Aid Detachment"—the "V. A. D.," as it is called—are all asked to submit to military drill for a stated number of hours during thirty-six weeks in the year. The heads of all the departments for women's work in England speak most strongly in favor of the rule. Not only does the training set the women up physically, but it leads to such habits of instant obedience, to such poise and freedom from nervous irritability, that it is worth three times the hours given to it.

What is true for the women of England is true for all of us. There are thousands and thousands of young people in America who will not be likely to have to serve unless the war lasts much longer than we now think it will last. Many of them have reached the troublesome introspective age when self-consciousness is a bother and valuable time is lost in vapors and imaginary troubles. Military drill would give those young people a new outlook on life. They would learn through the mass discipline that is so potent a matter in soldiering that whether an order is pleasant or unpleasant is neither here nor there; that they are not called upon for opinions about what is going on about them, but that all they have to do is to obey instantly whatever order they receive.

One great authority in England said the other day, "The people who have been useless to England are those who have never organized and submitted to training." It is unnecessary to point out what the physical gain will be if all the young people of the country are obliged to submit to military drill and some measure of military training. The Boy Scouts tell the story. Even a few "setting-up" exercises every day would work miracles for our anemic, flat-chested, sallow, restless boys and girls.

THE WELCOME TO JOFFRE

NOT since Dewey returned from Manila have the American people given such a demonstration of enthusiasm for one man as they have given for Marshal Joffre. They have welcomed his colleague, M. Viviani, and the British commissioner, Mr. Balfour, with generous sympathy and profound admiration, but to Gen. Joffre they gave not only enthusiasm but the more precious tribute of affection and reverence. It was Gen. Joffre that millions of people lined the streets of cities to see. It was to gaze at Gen. Joffre that thousands of fathers lifted up their little boys.

There was sound reason for the tribute. The Battle of the Marne was one of the decisive battles of the world; never in any battle that history records was there a greater issue at stake. It was there that autocracy, the foe of civilization, learned that it was not to conquer the world. There democracy was saved; and it was saved chiefly through the skill, the genius and the steadfastness of Gen. Joffre. Ever since those days in September, 1914, he has been for the American people the hero of the war.

It was, however, more than his soldierly qualities that captivated American hearts. The endearing traits that won him the nickname "Papa" Joffre showed in his serene and kindly face. Those who saw him could better

than before appreciate a touching anecdote, perhaps not too well known, that illustrates his tenderness of heart. He had called for volunteers to perform an important but desperately hazardous service. Out of a number of young soldiers who presented themselves he selected three. He gave them their instructions. They saluted and turned to go. "Mes enfants!" called the general with a note of appeal in his voice, and the young men turned back. "Since when do children go upon a long journey without kissing their father good-by?" And the general, with tears in his eyes, kissed each one upon the cheek.

Two incidents in Gen. Joffre's career might be commended to the thoughtful study of Americans in high position. He won the Battle of the Marne only because in the first days of the war he relieved some twenty generals—most of them his personal friends—of their commands. He did not permit personal friendship or political influence to weigh in the balance against incompetence. And he himself, when it came time to relinquish the supreme command in the field, gave way cheerfully to a younger man, and was content to serve his country in a post of less authority than that which he had held.

TRUE AND FALSE ECONOMY

THERE is a story, at which farmers smile, of a thrifty man who cooked his potatoes after laying by the peel for seed. The peel, he reasoned, contained the eyes, or buds. Plants ought to spring from them and bear potatoes in their turn. So they did, and the potatoes reached the size of walnuts. Some newspapers have recommended a similar practice this year, when seed is expensive and everyone is making a garden; and it is true that with skillful cutting, abundant fertilizer and expert cultivation a very small part of the potato, if it contain a bud, can be made productive. But any attempt to cheat nature is bound to fail. Nowhere is the proverb, "Nothing spend, nothing have," better illustrated than on a farm. The sprout should have a decent amount of nourishment from the substance of the parent seed if it is to make a vigorous growth.

The principle thus illustrated has a wide application. Lime, for example, is known to have little worth strictly as a plant food. So some farmers and gardeners count it a waste of time to bother with it. They will feed their crops with true fertilizer and save both time and money. But a soil from which the lime has leached out and which has become sour is like a man with impaired digestion. It cannot assimilate the plant food spread upon it in such a way as to become productive. The lime corrects the acidity by a chemical process; so, in breaking up a fallow field, in planting ground so repeatedly cultivated that rain has washed out its lime, and particularly in making a lawn, few things pay better than a careful examination into the acidity of the soil. Wherever moss and sorrel grow lime is likely to be needed; and if a test with litmus paper shows considerable acidity, true economy dictates immediate treatment.

Spraying for insects and fungi costs time and money. Trees get on and bear some fruit without it. Potatoes ripen after a fashion, although the leaves blacken with blight or are half eaten by beetles. But potatoes thus given over to their enemies refuse to return any profit to their planter. Unsprayed trees unquestionably bear fruit; but the fruit ceases to sell to advantage in the market or to keep in the cellar, and the tree itself fails to make adequate growth. You look at the tip of an apple bough and see the leaves of it curling under the attacks of the aphids. If you will take the trouble to kill the insects with a mild solution of nicotine, you will soon see the new growth start and will learn a lesson about the cost of such seemingly insignificant pests that you will not easily forget.

Pruning is so generally recognized to be good economy that little need be said about it; but to thin out growing plants properly requires more resolution than the average amateur possesses. It seems a sinful waste to pull up half your onions or to pick young fruit when it has set so thick and markets are so bare. But it is good practice if the vegetables are too close to permit normal growth or there is more fruit than the tree can ripen without overstrain. This year, in particular, many young gardeners who look with delight upon the start of their beets, onions and turnips will be disappointed at harvest to discover how small and immature their vegetables seem. The trouble will be that they have crowded and smothered one another. Thinning seems

like waste, but it is real economy; and in such processes continued year after year the worker in the earth learns how just a judge between true and false our Mother Nature is.

CURRENT EVENTS

IRELAND.—All parties in Ireland having expressed dissatisfaction with the form of settlement proposed by Mr. Lloyd George, the Premier announced that the Cabinet had determined to put the future of Ireland into the hands of Irishmen. The new plan provides for a convention, representing every variety of political opinion and religious belief, to discuss the situation and, if possible, to unite on a constitution for Ireland. Even the Sinn Fein revolutionists are invited to be represented, although they do not view the plan with favor, since absolute independence of the British Empire is their ideal for Ireland. The proposal was received with satisfaction by almost all Nationalists, including Mr. Redmond and Mr. O'Brien, and was generally approved by Englishmen of all parties. The chief difficulty promised to be with the extreme Unionist sentiment in Ulster.

JOHN REDMOND

RUSSIA.—The Cabinet has been reorganized by adding several representatives of socialistic opinion, and there is reason to believe that a much greater degree of national unity will result. Prince Lvoff remains the Premier. —The appointment of Kerenski as Minister of War is popular with the army, and several of the generals, including Brussiloff and Gurko, have withdrawn their resignations. The provisional government issued a declaration that Russia would stand firmly by its allies, and that its military resources would soon be employed in active support of those allies. It reasserted its desire for a "peace without annexations."

GERMANY.—The Reichstag adjourned to July 5, when it will meet for a three-days' session. —The Grand Dukes of Mecklenburg-Schwerin and Mecklenburg-Strelitz have announced that they will consent to "far-reaching" revisions of the constitutions of those states. Neither of those duchies has at present any popular legislative body whatever. —It was reported that the Imperial Chancellor had proposed to Bavaria the division of Alsace-Lorraine—now an imperial province—between Prussia and Bavaria.

CONSPIRACY TRIAL.—Capt. Franz von Rintelen, David Lamar and H. B. Martin were convicted of conspiracy against the legitimate trade of the United States and given jail sentences. Concerning the other defendants the jury disagreed.

CONGRESS.—The war army bill was finally passed by both houses and signed by the President on May 18. The Senate passed the army and navy deficiency bill, which provided \$750,000,000 for building merchant vessels, and authorized the President to take over ship-building yards throughout the country. On May 23 the House passed the war revenue bill. It had been amended by adding heavier surtaxes on large incomes. In the case of incomes of \$1,000,000 or over the surtax amounts to 45 per cent. —The Senate took up the Gore food bill, which authorizes the government to control the producing, distribution and marketing of food, including the fixing of prices. There was some opposition to the broad powers conveyed by the bill, but the Lever bill, introduced in the House, gives the President far more sweeping powers of control over the supplies of food, fuel and clothing.

WAR PREPARATIONS.—After signing the war army bill, President Wilson set apart June 5 as the day on which all male citizens liable to military service under the new law must be registered. The date for making the selective draft was not fixed. The President also announced that he should not avail himself of the authority to permit volunteer forces to be raised, since his military advisers believed that such a course would be a mistake. Col. Roosevelt accordingly released the men who had enrolled for the division he hoped to take to France. —On May 18 the War Department announced that a force consisting of approximately one division of United States regular troops would be sent to France as soon as possible, and that Gen. John J. Pershing would command the expedition. A regiment of marines under command of Col. C. A. Doyen is to go with this force; with the engineer corps that has already been formed for service abroad there will soon be nearly or quite forty thousand Americans at the front. —The President has ordered the mobilization of the entire National Guard, beginning on July 15. —On May 19 the President made public a

statement to the nation explaining his reasons for desiring legislation to permit very complete control of the food situation by the government, and declaring that if such legislation were passed he should appoint Mr. Herbert C. Hoover as food administrator. —A report from Philadelphia brought the news that Mr. Simon Lake, the inventor, had made plans for a fleet of submarine merchant vessels each capable of carrying a cargo of several thousand tons, and virtually immune from submarine attack. —The United States plans to build thirty-five hundred war planes for its air service this year. —The Italian war commission, led by the Prince of Udine, reached Washington on May 23. Marconi, the inventor of the wireless telegraph, is a member. Capt. Tardieu, the commercial high commissioner from France, has also reached Washington.

THE GREAT WAR

(From May 17 to May 23)

During the week the British made good their hold on the villages of Bullecourt and Roex, and the German counter-attacks in those districts came to an end. There was evidence that preparations were being made for another forward movement, which must now be directed against the new Drocourt-Queant line, which protects Douai and Cambrai.

On the French front the Germans made a number of counter-attacks in great force, particularly at the two ends of the French advance that is directed at Laon. They took back some lost trenches, but made no serious impression on the French line. Air fighting was continuous, and both armies lost a number of planes.

The Italian offensive on the Isonzo front turned out to be a very determined one. Supported by some British heavy guns, the Italians have smashed a number of Austrian positions on the Carso plateau and the left bank of the Isonzo. According to one report, the Italians have taken Duino, which is on the seacoast only twelve miles from Trieste. The main attack, however, was on the strong Austrian positions on Monte Cucco and the Vodice, a few miles north of Görz. Those positions the Italians took by assault; if they can be held, they will make it possible to resume the campaign on the Carso plateau north of Trieste, for so long as the Austrians held them they threatened the flank of any Italian advance.

From Macedonia, French attacks on the heights above Monastir were reported.

There was renewed activity along the Russian front in the form of local skirmishes.

There was a lively sea battle in the Adriatic. A squadron of Austrian light cruisers attacked a line of British mine sweepers in the Strait of Otranto and sunk fourteen of them before Allied war vessels came up and chased the Austrians back into port at Cattaro. Vienna reported a British cruiser sunk in the battle. London admitted that the Dartmouth was hit by a torpedo, but added that it returned safe to port. The Austrian account also spoke of several Italian merchant vessels and destroyers sunk during the raid. Paris admitted the loss of a French destroyer.

There was much indignation in Sweden when it was announced that three Swedish steamers loaded with grain had been sunk by German submarines, although their safety was supposedly guaranteed. The German minister at Stockholm hastened to apologize, but the Swedish newspapers agree that Swedish sympathy for Germany will be less marked as a result of the episode.

The British troopship Cameronia was sunk on April 15 in the Mediterranean with the loss of 140 lives. The fact has just been made public.

The weekly report issued from London on May 23 admitted the loss of 27 British merchant ships, large and small, from submarine attacks.

Serious riots occasioned by an insufficient food supply have occurred in Lisbon, Portugal; it was reported that the Portuguese fleet had been obliged to turn its guns on the city.

Our State Department has protested to Germany against the detention in Belgium of American citizens who wish to leave that country. It also refused passports to American Socialists who desired to attend the conference at Stockholm, and warned all American citizens against taking part in that conference.

Semiofficial dispatches from Budapest announced the resignation of Count Tisza, the Hungarian Premier; his views concerning franchise reform in Hungary did not agree with that of the Emperor.

On May 18 Sir Robert Borden asked the Canadian Parliament to pass a law for conscription by a selective draft. He said that Canada must raise 50,000 or 100,000 more men. The law is likely to be opposed by the French Canadians and perhaps by the labor party.

Nicaragua has severed diplomatic relations with Germany.

On May 22 President Braz of Brazil asked the Congress of that republic to revoke the declaration of neutrality made when the United States went to war against Germany.

A Hundred Reasons For the Mitchell Car

MOST fine cars have some distinctions which set them apart from others. The Mitchell has at least a hundred of them.

The reason for this lies in a model factory, built and equipped by John W. Bate. A factory which typifies scientific efficiency, and which saves this year, by its up-to-date methods, about \$4,000,000 in factory cost.

It is that tremendous saving which makes these extras possible in cars at Mitchell prices.

Everything You Want

You want a complete car. In the Mitchell you find 31 wanted features which nearly all cars omit.

You want beauty and luxury and comfort. We have added 24 per cent to our luxury cost in one year.

You want a distinctive car. Every Mitchell body is designed and built in the Mitchell shops—to offer styles you cannot find elsewhere.

You want lifetime endurance. Every vital part in Mitchells is given 100 per cent over-strength. That is twice the usual margin of safety.

A 14-Year Evolution

It has taken 14 years and 700 improvements to develop the Mitchells as they are today. Thousands of motorists have been consulted, hundreds of other cars examined. In 1913, John W. Bate spent one whole year in Europe to glean ideas from there.

That is why Mitchells are so complete, so handsome, so all-enduring. All the best ideas of Motordom are combined in a single car.

See the Mitchell, for your own sake, before you buy a car to keep. Otherwise, there are many good things you'll miss.

THE GOLDFINCH

By Odell Shepard

DOWN from the sky on a sudden he drops
Into the mullein and juniper tops,
Flushed from his bath in the midsummer shine
Flooding the meadowland, drunk with the wine
Spilled from the urns of the blue, like a bold
Sky buccaneer clad in sable and gold.

Lightly he sways on the pendulous stem,
Vividly restless, a fluttering gem,
Then, with a flash of bewildering wings,
Dazzles away up and down, and he sings
Clear as a bell at each dip as he flies
Bounding along on the wave of the skies.

Sunlight and laughter, a winged desire,
Motion and melody married to fire,
Lighter than thistle tuft borne on the wind,
Fainter than violets—how shall we find
Words that will match him, discover a name
Meet for this marvel, this lyrical flame?

How shall we fashion a rhythm to wing with
him,
Find us a wonderful music to sing with him
Fine as his rapture is, free as the rollicking
Song that the harlequin drops in his frolicking
Dance through the summer sky, winging so
merrily
High in the burning blue, singing so airily?

THE FAR LOOK

THE oculist leaned back in his chair and surveyed his patient thoughtfully. "Is there a beautiful view anywhere near your house?" he asked.

For a moment Mrs. Parsons frankly stared. The various tests through which the specialist had just put her eyes had not prepared her for any such commonplace question as that.

Then, with a smile, she recovered herself. Even doctors might like to chat a little. "Why, yes," she answered, "there's a very pretty view across to the distant hills from one of my upstairs windows. Some of our suburbs are lovely, aren't they?"

"How often do you look at it?" asked the doctor.

"Why, every day or two, I suppose. You see it best from the guest room, so perhaps —"

"And for how long a time, should you say?"

Something in his tone told her there was a real purpose in his questions. Mrs. Parsons paused a moment to think before she answered.

"Why, perhaps a minute," she said, and then she added with a little embarrassment, "sometimes more, but not often."

"And yet it's a beautiful view?" The doctor's tone was quizzical.

"Yes, it is," she said, "but I'm a busy woman, doctor, and I have to do most of my looking at little dresses and stockings—when it's not family letters or some kind of necessary reading. A house-mother has to use her eyes mostly on things that are close at hand."

"And that is just what tires them," said the doctor, rising. "It is the far look that rests the eyes, Mrs. Parsons. If you wish to cure those eyes of yours, make it an ironclad rule to gaze at your beautiful view for at least twenty minutes a day—preferably thirty. If you keep that rule, you won't need to come to me again in a long time—if ever."

Mrs. Parsons herself told the story months later to one of her friends, and in answer to a question she said delightedly, "Yes, I followed his advice, and he was right; all that my tired eyes needed was the rest of that 'far look.'"

"But I wonder," she added thoughtfully, "if that wise doctor knew for how much more than my eyes he was prescribing. My soul needed rest quite as much as my body, and the re-creation that I gained was miraculous. The twenty minutes soon grew into half an hour, and more. It became the most important part of the day to me."

"Instinctively as I gazed out over that beautiful prospect my mental eyes began to take the 'far look,' too. The little things close at hand didn't seem so overwhelmingly important as they had before I could see further into the future and higher in the scale of values; my mental eyesight grew stronger and clearer along with my physical. It's possible, I am sure, to have eyestrain in the mind and in the soul as well as in the body. And the practice is far too valuable ever to let go. Even in the city, where I have no hills and mountains, I can look up and up into the sky and imagine more miles than I can count. If there is anything better than a stary night for cultivating a 'far look'—in every sense of the word—I have yet to discover it. And oh, how it 'trues' your sense of values!"

ELEANOR'S BIRTHDAY

AND one more thing," said Eleanor. "I know you're going to protest about this—being the kind of family we are. And you understand that I am not criticizing in the least; I am only asking for myself the privilege that I accord everyone else, of living his life in his own way. I don't want—please understand, everyone!—any more birthday celebrations. I know you all love me, and that's all I want. It's so foolish to give me things when I am earning enough to buy everything I need, or to invite people in when we'd be happier just by ourselves. Don't you see, dears? I want the love but not the things."

It was very clear and sensible, of course—Eleanor was clear and sensible, and they were all consciously proud of her, only —

"But, dear," mother began.

Eleanor looked across at her with a smile. "But, mother! Isn't it far better to give the money—if you must give something—to some one in need?"

"But there won't be any secrets!" Pippa cried in dismay.

"And if there aren't any secrets, kitten, then you won't have any terrible time keeping them," Eleanor told her.

She had her way, of course—Eleanor always did. And she went off to her work, gay and contented. She had thought of it just in time—her birthday was only two weeks off. And Pippa would have made her a handkerchief or something with dear, impossible stitches, which she would have had to keep because "the baby" made it; and Dick would have spent his money on some awful thing like perfume; and mother—the laughter in Eleanor's eyes softened to tenderness—mother would have denied herself something she needed to buy Eleanor some

luxury she did not need. Oh, it was so much more sensible just to be loved!

Ten days later Eleanor's work happened to take her near Nina Lavezzo's, and she dropped in for a moment; she was very fond of the soft-eyed little Italian woman. She found her excitedly decorating the tiny rooms with tissue paper and tinsel.

"It is a festa," Nina explained. "Rosa has a birthday. The children have the grand excitement. Carlotta has made a collar, and Pietro, he has built a box—show Mees Eleanor, Carlotta—Pietro! They love best of all the year the festa of Rosa."

Eleanor praised the gifts, but she was thinking of something else. All that day two faces would not leave her—Carlotta's, radiant over her loving gift, Pippa's, with dismay in her big, brown eyes. And there was mother—mother who so loved to make birthday cakes! Had she after all been selfish? At four o'clock she could stand it no longer and called her mother on the telephone.

"Dear, I've changed my mind about my birthday," she said. "It wouldn't be right without my cake. And if the children want to do some bits of things, bless their hearts—Isn't it horrid of me not to see fit so late?"

She hung up the receiver and turned back to her desk. She could still see Pippa's face, but her eyes were shining like stars now. Oh, suppose she had kept on being blind, and hurt them all so!

THE BEAR AND THE BUGLE

IN The Companion for February 12, 1914, writes a contributor, there was an account of a bear that died of fright, which reminds me of a story that was often told me by a man, now old, who in his youth herded geese for a farmer on the St. John River, between Maine and Canada. I cannot vouch for its truth, but the old man was not accustomed to trifle with the truth, and I know his neighbors all gave the story complete credence.

"I was a hearty, lusty kind of critter in them days," so the old man used to say, "and there was very few things I wasn't into and out of. I could reap and bind and use an axe, and I was pretty good at runnin' and wrasslin'. There was an old man nearabouts that was thought to've been a deserter from the English army, and some of us youngsters he showed how to drill; and as I took to it better'n some, he showed me the use of the bugle and taught me some of the calls. He'd been a bugler in the army."

"That year I worked for a farmer who lived on the river near where a small stream made in. The point of land where the two streams arrowed together was very flat and smooth, and it run out to a thin sliver of sand at the point. Back of the point it was covered with thick grass. It was a handsome place to fatten geese, if they were let alone, and that was my job—to make sure nothing bothered 'em."

"The farmer I worked for had a big farm. He raised a power of hay and he tied up forty head of cattle, and the butter he made he sent downriver to the big settlements. And in the fall of the year he'd send down load after load of chickens and geese. Many a night I've been up till daylight gettin' a load of 'em ready to go in the mornin'—a load for a yoke of oxen, mind you!"

"The chickens had the run of the farm and took their own chances of foxes and such, but the geese he looked after more careful, herdin' 'em down where the grass was good and sendin' me to get 'em up at night. The geese had got so they knew me, and would come when I called 'em, and generally they'd come when I'd got to the top of the hill that looked down on the river and blew on the bugle the old soldier let me take. The old gander'd squawk once or twice, and the whole 'b'llin' of 'em would p'int for me, and I'd drive 'em home. I guess there was four hundred of 'em."

"One evenin' I went down for the geese, and when I fetched the top of the hill and looked down onto the flat there wasn't a goose there—they was all out in the night of the river, huddled together in a bunch, lookin' like half an acre of snow ice. Their heads was all p'intin' one way, and when I hove in sight they set up a squallin' that all but deafened me. I never heard such a touse!"

"Thinks I, 'There's a fox there, mebber,' and I sneaked down over the grass to'rds the place where their heads was p'intin'. There was a little clump of basket willow right there on the edge of the bank, and the geese seemed to be squallin' at somethin' hid there. I jealousy it would be a good prank for me to jump into that bunch of willows and let out a blast on my bugle when I lit. I figured it would give that fox somethin' to think of all the rest of his days."

"So down that slope I went, and when I come over against the bunch of bushes I gathered myself and lep' up and out—and while I was in the air I'd 'a' give anything in the world to be able to turn and jump back without lightin', for it wasn't a fox at all; it was a bear, black as a winter mink and as big, seemin'ly, as any cow we had! He was jest risin' to his hind feet and he had his for'ard paws stretched out to'rds me, and I lit right in 'em, so all he had to do was to hug me in and that'd be the last of me."

"It wasn't a question of seconds, even; it was time reckoned by winks of the eye, or less, that the rest of it happened. Just as I come down into the bear's arms, as you might say, his ear come at the mouth of the bugle, where I'd set it to my mouth as I'd jumped, and with the last bit of breath and strength I had, I blowed a blast into his ear—a blast fit to stir the dead!"

"And with that blast," the old man always finished, "I felt his arms, that had been tightenin', grow slack, and only for my jumpin' back smart, he'd 'a' fell on me. Yes, sir, it killed him. That awful clare, like nothin' he'd ever heard in all his life, comin' right inside his ear and head, you might say, killed him as quick as a bullet—mebber quicker. But you better believe I never tried to kill another one that way!"

AN OPPORTUNITY LOST

RUSSIAN peasants have the kind of credulity that arises from a vivid imagination. If you tell one of the daily life in Paris or in London—of the tubes, the underground railways, the telephones—he will tell you plainly that you are jesting with him; but if you should assert that silver and gold were scattered about the streets, he would believe you implicitly, for he has heard many stories of the wealth of the French and the English. Fairy tales and miracles are his native mental fare; facts concern him very little.

The average peasant holds very curious ideas on religion and the will of the Almighty, a characteristic that the author of Petrograd, Past and Present illustrates by means of an amusing story. A droshky driver once drove a gentleman to a certain

bank. His fare, who had money and valuable papers with him, pushed them under the cushions for safety while he did his business; but on returning he found to his dismay that the man had driven off, taking with him the portfolio, which contained among other things notes to the value of several thousand rubles.

The owner was, of course, in a state of great perturbation, and informed the police, who forthwith summoned every day a number of the thousand drivers in Petrograd to report themselves. At last they found the missing one and charged him with the theft; but the poor fellow was astounded, and stoutly denied having taken either the money or the papers. The police searched the cab, and there, sure enough, was the missing portfolio with its contents intact.

The owner was overjoyed and gave the man a handsome reward. But the droshky driver was dumfounded and could not understand the reason for his patron's generosity. When, at last, he learned that the little leather book had contained a small fortune, his sorrow and disappointment knew no bounds. He could not get over his astonishment, and finally hanged himself in disgust at the thought that God had sent him all that money and he had not taken it!

AND NO WONDER

"Shut that blinkin' door; there's an awful draft in 'ere." —Bruce Bairnsfather in Bullets and Billets.

HOW SILAS HELPED

PLODDING slowly toward the village, Obed Gunney stopped to exchange a neighborly word with Caleb Peaslee. The sun was hot, and Obed rested a heavy parcel on the fence while he mopped his heated face.

"It's somethin' I thought I'd get for my wife, to kind of pleasure her a mite," he explained, "and after I'd got it home I found out that she'd gone and got somethin' 'bout the same ahead of me; and if she hadn't, what I got wa'n't what she'd have wanted, anyhow." He sighed and looked at the parcel despondently. "So I'm taking it back to the store," he added.

Mr. Peaslee expressed his sympathy heartily. "There ain't much use in callatin' to please a woman," Mr. Gunney went on pessimistically. "A man can plan to do somethin' to help one of 'em, or please her, or both, and the chances are that, after he's done it, it'll be jest the wrong thing. Sometimes I'm a good mind to quit tryin'."

Mr. Peaslee smiled comprehendingly. "That was 'bout the way Silas Bent felt the time he tried to help out his sister once," he remarked, "only in the case of Silas, he wa'n't tryin' to help his sister nor give her pleasure half as much as he was plannin' to help Silas."

"This Silas Bent," Mr. Peaslee went on, "was a very snug, sparin' kind of a critter that lived on the ridge road. He had a little farm that he carried on mostly with borrowed tools."

"Right the next place to Silas's, as you went along the ridge, was where his sister, Mary Forbes, lived. She'd married a smart kind of a man that had died and had left her the place and tools to farm it with, and Silas used to depend on her mostly for anything he wanted to borrow."

"Silas had a hoss—that is, he called it a hoss, and it had four legs and switched its tail—but he didn't have anything to hitch into but his farm cart. Mis' Forbes had a couple of express wagons, and Silas got so he used 'em full mornin' she did; he'd jest go and get 'em when he was minded to, 'thout leave or license."

"It so happened one day that he was up there, and he heard her talkin' with one of the women neighbors 'bout paintin' the wagons—'t any rate, they was lookin' at 'em and talkin' paint. Silas done what he come for, whatever 'twas, and put back home, and all he remembered 'bout it was what his sister said last—that she'd get the paint the next day and have it done right off."

"Well," Mr. Peaslee went on placidly, "a couple of days after this Silas was thinkin' things over, and all at once it come to him that he was goin' to need one of them wagons to get to Bangor with pretty soon, and he thought he'd better go up and see whether she'd had 'em painted yet, lest they didn't have time to get dry by the time he'd want to use one. So off he put to see 'bout it."

"When he got there he couldn't find a sign of his sister, but he got to mousin' round, and out in the carriage house he found some cans of red paint settin' in a row on the floor—'nough for a half a dozen wagons, if he'd stopped to think."

"Well, there it was! The wagons wa'n't painted and he was goin' to want one pretty soon, and anyway he'd got so into the way of usin' 'em that he felt a good deal 'sif he owned 'em; so what did he do but turn to and paint 'em both, usin' the paint he'd found."

"He'd jest got the job cleverly done and was standin' there all paint from head to foot, kind of admirin' the way they looked, when a wagon drove into the yard; and when he turned to see who it was, there was Mis' Forbes with a man and a led horse, and Silas didn't have to take two looks at her to see that she was mad clear through."

"I'd like to ask you, Silas Bent," she snapped

out, "what on earth you're tryin' to do here? Where'd you get that paint, and who give you any liberty to paint them wagons, anyway?"

"Silas started to say somethin' 'bout findin' the paint in the barn, and that give her a new and wuss turn. 'I've put up with a lot from you,' she says, 'but this passes bearin'! I got that paint to go over the end of my barn with,' s'he, 'and I traded both them wagons to pay for it, and now you've gone and wasted half of my paint on two wagons that don't belong to me! But I ain't going to lose by it; you can pay me for it or you'll pay a lawyer—brother or no brother!'"

"Well," concluded Mr. Peaslee, "Silas paid, but he done it kind of grudin'. And I overheard him say, a spell afterwards, that it would be a long day fore he ever tried to do anything to help out a woman again. He said there didn't seem to be any please to 'em."

THE HORSES

A RECENT observer of the British methods of training horses for use in the army noticed that at the close of each day's drill there came, following the order to dismount, another order that is without parallel in any other army. It was apparently a single mysterious word: "Muchyerosses!"

The fact that each rider proceeded to stroke, pat or pet his charger, perfunctorily or affectionately, as the case might be, rendered the interpretation clear. The command meant, "Make much of your horses."

The English are a nation of horse lovers, and in the English army horses are as well cared for, both from true humane feeling and motives of economy, as the cruel wastage of war will permit. They are overworked only when they must be, are well fed and often "muched"; and there are horse hospitals for the wounded. But many poor, faithful creatures are sacrificed.

A graphic writer, Mr. R. B. Cunningham Graham, has described, with much feeling, the last free run and feed of one of the many troops of horses sent from Uruguay to the battle front. There were five hundred of them, including two beautiful bright bays with white legs and noses, which were known as the twins.

"Whenever either of them stopped to eat, its companion would turn and neigh. On the instant the other would raise its head and gallop up. Arena, our head man, riding beside me, wheeled round on his horse so suddenly that they stood poised like an equestrian statue, looked at the twins and remarked:

"Patron, if they have got to die in the great war, I hope one shell will kill them both."

"The horses smelled the water at the bottom of the hill and the whole five hundred broke into a gallop, with manes flying and tails raised high, and we raced madly by their side until within a hundred yards of the great lake. They rushed into the water and drank greedily, while the setting sun fell upon their many-colored backs and gave the whole herd the look of a vast tulip field."

"After the herd had drunk and had scattered in the lush pasture to feed tranquilly, one of the herdsmen apostrophized them sorrowfully:

"Eat well; there is no grass like that of La Pileta where you go, across the sea. The grass in Europe must all smell of blood."

TRULY EXCLUSIVE

TO a contributor, Mr. W. E. Nesom, we are indebted for this sympathetic and humorous word portrait of our friend the ground hog:

The woodchuck, in his earthen cell,
Will sit all day and pout,
And, like some hermit monk, repel
Attempts to draw him out.

You see him not, though he sees you,
And he will never choose
To propagate acquaintance through
An interchange of views.

Against the "feelers" you employ
He's absolutely proof;
Retiring, reticent and coy,
He holds himself aloof.

With points of view or points of sticks
In vain will you cajole him;
He doesn't care for politics,
And you will fail to pole him.

With burning word or burning twig
'Tis useless to endeavor;
They leave this little stoic prig
Reserved and cold as ever.

He never makes advances, nay,
And when that burden's laid
On you, you have to pick your way—
Unless you use a spade.

A MIGHTY MONOLITH

A WRITER in the Christian Herald says that he had heard great stories about the pyramids, but that after seeing the stones at Baalbek, those of the great pyramids looked like children's building blocks. In the quarry is a stone on the upper surface of which a troop of cavalry could stand. It is squared on five sides, but not yet detached from the ledge.

The Arab legend is that a female giant was carrying the stone when she heard her baby cry. She dropped it there, and no one has moved it since. If that baby had not cried for its mother, there would be to-day in the walls of the temple a stone seventy feet long and fifteen feet square! Doubtless it will some day justify the amount of work done upon it. At present it helps six hotels, a dozen curio shops, a score of muleteers and a station master.

CONSERVING HIS ENERGY

CLARENCE announced his approach, says the Chicago Herald, by a rising succession of howls. "Oh, my finger! my finger!" he cried. "Poor little finger!" his mother cooed. "How did you hurt it?"

"With the hammer."

"When?"

"A long time ago," Clarence sobbed.

"But I didn't hear you cry."

"I didn't cry then; I thought you were out," said Clarence.

A SAD AWAKENING

THE foreman of a construction gang was walking along his section of the railway one day when he came upon a laborer fast asleep in the shade of a fence. Eying the man with a stern smile, he said:

"Slape on, ye idle spalpeen, slape on. So long as ye slape ye've got a job, but when ye wake up ye're out of wurrk!"

This is the best of all the months,
For school is ending soon;
And that is where it gets its name—
"The daisy month of June"!

WHAT MADE THE DRAGON FLY

BY ABIGAIL BURTON

THERE was once a dragon fly—only he did not fly. He just crept round the edges of the pond, and swung on the reeds for exercise, when the wind was not too strong, and cuddled to sleep in the heart of a big water lily.

Oh, he was a terrible coward! His wings were big, beautiful, gauzy ones, but instead of spreading them over his back and floating off into the sunshine he kept them folded tight. And the very thought of flying made him shiver so that he tumbled into the mud and got himself all sticky.

No wonder that they called him Dragon Creep!

It was not a bit of fun being a dragon creep. The sunlight and the flowers seemed so far away! And his legs would wobble! You see, they were annoyed at being used so much. Of course they did not mind carrying Dragon Creep a part of the time, but they thought that the wings should do their share.

And the other pond people were most unpleasant. The butterflies and the moths were too polite to say anything, but it was plain that they did not care to associate with a coward; and the gnats and the water bugs and their friends were always poking fun at Dragon Creep, till, really, he hated to be seen.

One fine morning Dragon Creep was picking his way to shore across the lily pads.

The going was decidedly bad. The lily pads bobbed up and down, as the wind blew waves across the pond, and Dragon Creep was wet to his knees. He felt sure that he should be drowned, without even having had breakfast.

"Hello, Dragon Creep!" shouted Warty Water Bug.

Dragon Creep made no answer; he particularly disliked Warty Water Bug.

"There's a big wave coming!" shouted Warty Water Bug.

"You'll be drowned sure," said Longish Lizard.

"See him wobble!" cried Gnaughty Gnat.

Dragon Creep was only a few inches from shore; but just as he reached the last lily pad it drifted off in the wind.

"Mind your step," said Warty Water Bug, laughing, and kicked with all his legs against the leaf that held Dragon Creep.

Dragon Creep sat down suddenly. He was wet now to the chin, and his legs shook so that he could not get up on them again.

"Ho! ho!" said Longish Lizard, chuckling.

"So you're taking a bath!"

"Don't forget your ears," said Gnaughty Gnat, giggling.

"Is there room for me?" asked Snarly Snail.

And with that he climbed upon the lily pad. Gnaughty Gnat and Warty Water Bug lighted on the upturned edge, and Longish Lizard settled in the mud close by.

You should have seen how that lily pad rocked! Dragon Creep felt that he had crept his last. And without any breakfast!

He must have looked hungry, because Snarly Snail said, with a wink at the others, "I had a fine meal at the Cressess' just now."

"So did I," said Warty Water Bug. "They set a good table."

"Where do you eat, Dragon Creep?" asked Gnaughty Gnat.

"It's none of your business!" cried Dragon Creep angrily.

The last lily pad had not yet drifted back; but something floated in its place—a black, scaly stick. What bridge could be better? Dragon Creep waded to the edge of the leaf, and stepped upon the stick.

There seemed to be a joke somewhere. If Dragon Creep had looked, he would have seen how Gnaughty Gnat poked Warty Water Bug in the ribs, and how the others covered their faces to keep from laughing aloud.

But Dragon Creep did not look; he was busy crossing his bridge. And he had got quite to the middle of it, when—"Ho! ho!" cried the bridge suddenly.

Dragon Creep nearly lost his balance, as you may imagine. But worse was to follow; for with astonishing swiftness the bridge caught its tail in its mouth and began whirling round and round on the top of the water. Did anyone ever hear of a bridge's acting like that?

Dragon Creep, too, went whirling round and round on the back of the bridge. He was frightfully dizzy, and he knew very well that

A SWING SONG

Words and Music
by
G.F. WILSON

1. Swing-ing in the old ap-ple tree, To a sleep-y tune,
2. Swing-ing in the old ap-ple tree, This is sum-mer joy,
3. Up and down I go in the swing, Skim-ming o'er the grass;

Allegro

Moderato

Hummed by all the breez-es, In the month of June. Lit-tle leaves a flut-ter Sound like danc-ing drops
Fun for all va-ca-tion, Don't you think so, boy? Up and down I see-saw, Mer-ry and at ease,
Ap-ple blooms and dai-sies, All a wo-ven mass. I am like a sail-or, Rock-ing on a mast,
sempre staccato

ril. *Tempo di valse*

Of a brook on peb-bles, Song that nev-er stops. Swing-ing in the old ap-ple tree, To a
Care-less as a brook-let, I-dle as the breeze. Swing-ing in the old ap-ple tree, To a
All the world my good ship, Ho! she sails so fast. Swing-ing, swing-ing, O what fun! One more

molto ritard on last time *perdendosi*

sleep-y tune, . . . Hummed by all the breez-es, In the month of June. . .
sleep-y tune, . . . Hummed by all the breez-es, In the month of June. . .
push up high! . . . Now the swing-ing time is done, Let the "old cat die." . . .

Sva loco *ril.* *perdendosi*

the black, scaly stick was nothing in the world but Slippery Snake—not a bridge at all.

What was Dragon Creep to do? If he tumbled into the water, he would drown. If he kept on winding up, he would never get unwound again so long as he lived.

Just then Slippery Snake took his tail out of his mouth and snapped himself like a whip. Dragon Creep went sprawling, and then—

His wings unfolded! They opened of themselves, in the way they had always longed to do, only Dragon Creep would not let them. They fluttered and trembled at first, but off they floated, up, up, into the sunlight, and carried shivering Dragon Creep with them.

You have no idea how delicious that sunlight felt! Dragon Creep forgot that he had ever been frightened. How delightful it was to have wings! And that was just what his legs were thinking. Dragon Creep lighted on a cat-tail. It was pleasant to be dry and warm again and to find some breakfast. But he scarcely took time to eat. Away he flew in circles—for he was still dizzy—high over the pond.

The butterflies and the moths saw him. "He is no longer a coward," they told one another, and bowed to him as they passed.

Oh, but Dragon Creep was happy!

"I shall never creep again!" he cried. "I shall always fly, fly, fly!"

And that is how he changed to a dragon fly.

GAMES OF OTHER DAYS AND LANDS

BY HARRIET O'BRIEN

IV. PALL-MALL

Five hundred years or more ago the young people of France had a game that they called *paille-maille*. In the time of Charles I, or perhaps a little earlier, the young people of England took up the game and called it pall-mall—which they pronounced "pell-mell." It has not been played in recent years, but it was the beginning both of the game of croquet and of the game of billiards. The players used a large wooden ball, a wicket or iron arch and a mallet or heavy bat. The object of the game was to drive the ball through the wicket and hit a stake or other mark beyond it.

Sometimes, however, the ball was placed at a long distance from the wicket, even several hundred yards, and the contest took the form of seeing which player could drive the ball through the wicket with the fewest strokes, or whether

any player could drive it through in a certain number of strokes agreed on in advance. In London the game became very popular in the seventeenth century, and one of the best-known alleys, that of St. James, was eight hundred yards long, and made of hard sand "dressed with powdered cockleshells."

Winners!

The safe hitters of the Bicycle Tire League are **Pennsylvania VACUUM CUP TIRES**

Put a battery of them on your wheel and let them strike out the skids and slides on the wet, slippery pavement.

Let them win the season's pennant with a batting average of 1,000 for the greatest number of puncture-proof, stonebruise-proof, oil-proof, trouble-proof runs.

Best for boys who bicycle for business or just for the fun of it.

ARIE SCHOONHOVEN WOULD SIT ON THE DIKE PEERING INTO THE LOWERING LAKE

MYNHEER SCHOONHOVEN

By Gerrit Verkuyl, Ph.D.

ONE summer evening, not many years ago, as I was wandering aimlessly through the drained bottom lands of Haarlem Lake in Holland, I overtook an old man and walked on with him. His thin, white face was graced with a silver beard that fell in tresses over his sunken chest. He had been tall, but now he was stooped with age.

He wore garments that had been in style more than half a century before: knickerbockers gathered at the knees with silver buttons, and black woolen stockings that terminated in low, fancy shoes, the heavy clasps of which had been fashioned out of beaten silver. His vest was of clerical cut, but it lacked one button at the bosom and was slightly open there, as if to show the white shirt underneath. Close-fitting about his neck he wore a dark silk kerchief, such as in the earlier part of the nineteenth century used to be substituted by the country gentry of Holland for the linen collar of the city. Topping all was a high silk hat with narrow rim.

Mynheer Arie Schoonhoven was one of the rare survivals of the old Dutch gentlemen of the farm. It was not long, however, before he let me know that his heart was not on the land but on the water. For on the water he had been born; on the water he had spent his childhood, and on the water he had hoped to live and die. But when the lake of Haarlem was drained some seventy years ago the waters had been taken from under his feet. Willy-nilly, he had been forced to quit ploughing the deep, and ever since he had followed the plough in the field and had raised grain where once the nets had stood and the ships had felt the breezes. His love of the water had never died, and he was glad to tell me the story that made him muse during the evening of his life.

His grandfather, for whom he was named, had been the last of a long line of barons that traced their ancestry into the eleventh century. The ancient castle round which the modern village of Schoonhoven nestles has long since crumbled into ruins. It had been razed to the ground during the days of William the Silent, because a Schoonhoven had fought for his country against the tyranny of Spain. Later it had been rebuilt; but when toward the close of the eighteenth century the French revolutionists invaded Holland, it was leveled once more and the dwellers were driven away.

After many years of wandering, Mathys Schoonhoven, the father of my companion, settled in the beautiful town of Aalsmeer, on the east shore of the lake of Haarlem and about halfway between Amsterdam and Leiden. He had still sufficient money to purchase a well-built ship, with which he plied between the two cities on either side, a distance from each other of some twenty-five miles. During most of the year the entire family were with him on the ship. Their one room had to do service as kitchen, dining room, library, sitting room and dormitory, but it was sweet and clean and sunny.

During the winter months, when the ice was thick, the boat lay idle at Aalsmeer. That was the time for school attendance, which was not possible for at least nine months of the year. Mother Schoonhoven tried to instruct her children; but with the ship tossing about and new things to see every moment except at night, her teaching did not carry them far.

While the old man was ruminating so pleasantly over bygone days, a cloud of sadness crept slowly over his face. For a few long minutes he stood gazing at the fields about us; then he turned to me with a query as to whether I cared to hear what was uppermost in his mind. Of course I begged him to tell me.

In the early spring of 1838, after the ice had broken up, his father had sailed out for

Amsterdam to carry a cargo from there to Leiden. Mother Schoonhoven and the children never saw him again. But it was weeks before the tragedy became absolutely certain to them.

On the morning of the third day, as they learned later, Mathys Schoonhoven left Amsterdam. At seven o'clock that morning, three hours after leaving the city, he passed out of the peat-bog canals and made for the lake of Haarlem. At nine that same morning other ships sailed out of the lake into the peat-bog canals for the city; but none had seen Schoonhoven's ship. In those two hours, therefore, the ship and its crew had met their fate. A careful search was made by friends of the family and even by the government, but never a clue was found to unravel the mystery of that sudden disappearance.

Arie was then fourteen. He had expected to follow the mast and had apprenticed for no other trade. During those anxious weeks he grew from a careless boy into a thoughtful man. He was the oldest, and he determined to support his loved ones as God gave him strength.

The years of struggle that followed he spoke of hastily. They probably provoked no pleasing reminiscences. One thing, however, stayed with him through his every experience: he must some day discover where the noble ship went down and if possible what was the cause of its disaster. Since the ship had gone down between seven and nine the possible area was very limited. Somewhere within a space of some twelve square miles lay the ship and all that it contained.

A few years after the accident the government of Holland decided to undertake the gigantic task of draining the lake of Haarlem, which was gradually eating its way toward Haarlem, Leiden and Amsterdam. Next to such feats of engineering as the digging of the Suez and the Panama canal, this is probably the most daring enterprise of the last hundred years. They threw a dike round the fifty thousand acres of lake, and without a single flaw drew those untold billions of gallons of water upward to a height above sea level, and then poured them out to help fill the ocean.

After the draining had well started, and here and there a hull began to show above the surface, Arie Schoonhoven would sit on the dike of evenings and on Sunday afternoons, peering into the lowering lake. Every piece of mast or rearing prow challenged his keenest attention; perhaps he might discern the shape of his father's ship or even read its lettered name on the stern.

The bottom was strewn with the ships of many centuries. My friend tried to picture the scenes he witnessed as the water lowered every day. The wrecked vessels had never sunk deeply into the clay, but were for the most part lying on their sides. Smaller ones had lurched forward in their final plunge and now were standing on their heads, like boys at play. Older ships, wrecked hundreds of years ago, looked like so many fortresses. Their sides were thickly walled with the accumulation of ages. Here and there an opening remained as if for cannonading. To make the impression more striking, there were gathered about those older wrecks sunken vessels of every description whose ruin they had occasioned.

No sooner was the work of draining finished and the new land offered for sale, than Arie Schoonhoven bought as large a section as the government allowed to a single owner—about one hundred and fifty acres. He had carefully studied the probable location of the shipwreck, and felt convinced that the farm he had bought contained it. The ship itself, he had learned earlier, could never be identified. Too many hands had been there to dismantle every wreck almost before it emerged.

But there must be other evidences of his father, if he could only find them.

Years passed by with nothing but disappointment, until he had virtually given up all hope. One day he was ploughing a field that had never before been broken. On the up-turned soil, as he happened to cast his eye there, lay a rusty-looking tobacco box. Although the thing was probably of no value, he picked it up and carried it to his home in the evening. After a night in oil it yielded to his efforts to open it, and proved to be of silver. Inside the lid were the initials "A. S.," the same as his own. Above the letters he discovered the engraving of a farmhouse that had touches here and there of an ancient castle. It was a figure of the old family estate, "Schoone Hove," or Fair Estate. The blackness of the silver convinced him that the box had seen fire, and he still believes that fire was the cause of his father's disaster.

A few years later his laborers were digging a narrow ditch when they came upon a human skeleton. Near by were several pieces of gold and silver, bearing the image of William I, King of Holland; the most recent date among them was 1836. Most interesting of all was a huge watch. The case fitted so well that not a drop of water had entered the works even then. The big watch proved to be one of a well-known English make.

Mynheer Schoonhoven knew that his father had carried such a watch. If only it could be identified beyond a doubt he would feel more content. Inscribed on the outside of the inner case he found written, "Eduard Hill, London, No. 1691." Searching his father's papers, he came upon the corresponding name and number and so completed the identification.

To-day, if you should visit the Aalsmeer cemetery you might find among the family tombs one of Schoonhoven that bears, translated, this inscription: "Here lies Mathys Schoonhoven. Born Jan. 16, 1782. Shipwrecked March 4, 1838. Buried October 9, 1839."

My friend, after telling the story, reached into his vest pocket and brought out the same beautiful watch. Of late it had not run as perfectly as had been its wont; but he never would carry another. And he had willed it to his grandson, also an Arie Schoonhoven, already grown to manhood.

THE FRENCH PEASANT AND WAR

THE backbone of the French army, as he is the backbone of France, is the French peasant, says Mr. Henry Sheahan in A Volunteer Poilu. He has three very good qualities: endurance, patience and willingness to work. Apart from those characteristics, he is an excellent fellow by himself; not jovial, to be sure, but solid, self-respecting and glad to make friends when there is a chance that the friendship will be a real one. He does not care very much for the workmen of the towns, the *outriers*, with their fantastic theories of universal brotherhood and peace, and he hates the *député* whom the workingman elects as he hates a vine fungus. A needless timidity, some fear of showing himself off as a simpleton, has kept him from having his just influence in French politics; but the war is freeing him from those shackles, and when peace comes he will make himself known; that is, if there are any peasants left to vote.

Another thing about the peasantry is that trench warfare does not weary them, the constant contact with the earth having nothing unusual in it. A friend of mine, the younger son of a great landed family of the province of Anjou, was captain of a company almost exclusively composed of peasants of his native region; he loved them as if they were his children, and they would follow him anywhere. The little company, almost to a man, was wiped out in the battles round Verdun. In a letter I received from this officer, a few days before his death, he told me that his company was waiting, in a new trench, for the Germans to attack. Suddenly the tension was relieved by a fierce little discussion carried on in whispers. His soldiers appeared to be studying the earth of the trench.

"What's the trouble about?" he asked. Came the answer:

"They are quarreling as to whether the earth of this trench is better for cabbages than for turnips."

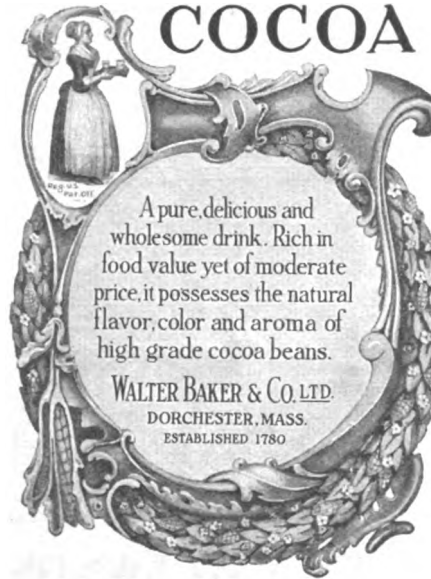

ENCOURAGING TO DULLARDS

LIKE Newton, Herbert Spencer in his school-boy days showed no aptitude for study.

Hugh Elliot, his biographer, says of him that "he was very backward as a boy in the ordinary subject of children's lessons. . . . Morally, he was extremely disobedient and contemptuous of authority." At thirteen, he "found the discipline of his school more severe than he cared about, and he ran away home to Derby again, walking forty-eight miles the first day." Yet, as a man, "without money, without special education, without health," says his biographer, "he produced eighteen large volumes of philosophy and science of many diverse kinds, published a variety of mechanical inventions, and on endless other subjects, great and small, he set forth a profusion of new and original ideas."

BAKER'S Breakfast COCOA

A pure, delicious and wholesome drink. Rich in food value yet of moderate price, it possesses the natural flavor, color and aroma of high grade cocoa beans.

PECACO CANOES

Trigger Magic

Have the fun a Winchester brings

What a good time you could have this summer with a real Winchester!

You're big enough now to have a gun; you've outgrown a bean-shooter. Toys like that are no fun any more, anyway.

Your Dad can tell you about Winchesters. Ten to one he had one himself when he was your age.

Ask him if he doesn't still remember the first time he pulled the trigger, if he still doesn't feel the spell of *trigger magic*.

You know what trigger magic is. It's that thrill you get when you crook your finger and see the bottles you are aiming at break into hundreds of pieces. Your eye can't follow the bullet, but it goes straight as a die right where you want it to go. That's what gives you that glow of pride.

Get Dad on your side

Tell him what a gun will do for you. Tell him it will teach you responsibility, self-control, self-reliance, and make you a good citizen of the future.

Tell him that sooner or later your natural interest in a gun is going to make you get your hands on a gun, so the sooner you learn the correct use of a gun the better. Remember it's just as important for you to know how to handle a gun safely as it is for you to know how to swim.

How'd you like to own one of these medals?

There's only one thing you could show the fellows with more pride than a beautiful, shiny,

brand-new Winchester—and that's a Winchester Silver "Marksman" Medal, or a bright Gold "Sharpshooter" Medal.

Just look at the medal on this page. Wouldn't you like to own one? Read underneath it and find out how you can win one just like it. Then go to Dad. Ask him now. Of course you'll tell him it's a Winchester you want.

What the name "Winchester" means

The Winchester Company is the greatest organization of its kind in the world. It makes a gun that cannot be duplicated by any other manufacturer.

No Winchester barrel varies one one-thousandth of an inch from a straight line, or one one-thousandth of an inch in thickness or diameter. Winchester craftsmanship is based on fine watchmakers' standards.

Every gun or rifle that bears the name "Winchester" is fired over 50 times with excess loads for strength, smooth action and accuracy.

All Winchester barrels are finished by the Bennett Process, which gives the barrel a finish that lasts a lifetime; hard to scratch and resists rust. All the color and gloss is in the metal itself—there is no artificial coating used.

This care in manufacturing explains why more Winchesters are used by expert shooters than all other small arms combined.

There is a place near you, either in the open or at a club, where you can shoot. If you do not know where to shoot, write us and we will tell you where and how you can.

Go to your dealer and look over the new stock of Winchesters. Ask the dealer for the catalog and the booklet on the proper use of a gun. If the dealer cannot supply you, write direct to us.

WINCHESTER REPEATING ARMS CO.
Dept. 29 NEW HAVEN, CONN.

BOYS AND GIRLS

Winchester Medals for skill with the Rifle

The Gold "Sharpshooter" Medal goes to any boy or girl under 16 who makes the first grade score with a Winchester.

The Silver "Marksman" Medal goes to the boy or girl who makes the second grade score.

Go to your dealer today; he will give you sample target and booklet explaining the full conditions of the contest. This booklet also tells you how to get the best results from your Winchester. The dealer will also supply you with plenty of targets.

If your dealer cannot supply you, write to the Winchester Repeating Arms Co., Dept. 29, New Haven, Conn.

MODEL 06. Take-down repeating .22 rifle. Shoots 3 sizes of ammunition, 20 in. round barrel.

MODEL 90. Take-down repeating .22 rifle. 24 in. octagon barrel. The standard gallery target rifle for 25 years.

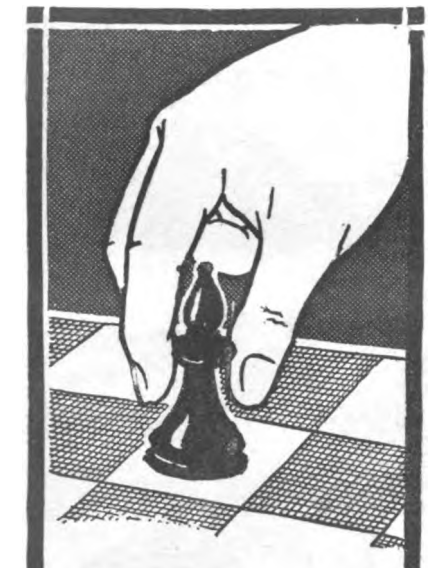

MODEL 02. Hammerless, take-down, single shot .22 rifle. 18 in. round barrel.

MODEL 04. Hammerless, take-down, single shot .22 rifle. 21 in. round barrel.

LE PAGE'S CHINA CEMENT
STANDS HOT AND COLD WATER 100

DEAN ACADEMY, Franklin, Mass.
51st Year. Young men and young women find here a homelike atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment permits liberal terms. \$300—\$350 per year. Special course in Domestic Science. For catalogue and information address,
ARTHUR W. PEIRCE, Litt. D., Principal.

NATURE & SCIENCE

AN AGED GANDER.—The birds that live to a great age are comparatively few. Gulls have been known to reach forty years, parrots frequently live eighty years, and swans nearly as long. Ravens and owls usually die somewhat younger, but there is good reason to believe that eagles and falcons sometimes live more than one hundred years. Of barnyard fowls, ducks and geese live longest. Mr. D. MacLachlan, of Islay, Scotland, writes to the Field that he has a gander that is now sixty-six years old. For forty-five years it belonged to the proprietor of a hotel at Bridgend, Scotland. Twenty-one years ago the father-in-law of the present owner bought it. Mr. MacLachlan says that the gander looks as well and as young and seems as active as it ever did. There is no doubt about its age.

THE FUTURE OF FLYING.—In an interview with a writer for Harper's Magazine, Mr. Orville Wright predicts that the aeroplane will play a great part in the new order of things that will follow the war. He believes that it will be in great demand whenever it is necessary to travel at great speed. By aeroplane it will be possible to go from New York to Chicago in eight or ten hours instead of in twenty, as at present; and to San Francisco in two days. Furthermore, it will be useful in transporting small packages and very valuable freight to remote regions that the railway cannot reach. There are thousands of such places in the West, in Alaska, in South America and in Africa. Mr. Wright thinks, too, that flying will become a popular sport, the greatest yet devised. He says: "It is far more exhilarating and delightful than the automobile for high speed, and far safer. The time is not far distant when people will take their holiday spins in their aeroplanes precisely as they do now in their automobiles. Long tours in the air will offer greater relaxation from the daily grind than long railway journeys. People need only recover from the foolish impression that it is a dangerous sport, instead of being, when adopted by rational persons, one of the safest. It is also far more comfortable. The driver of an automobile, even under the most favorable circumstances, lives at a constant nerve tension. He must keep always on the lookout for obstructions in the road, for other automobiles, and for sudden emergencies. A long drive is therefore likely to be an exhausting operation. Now, the aeroplane has a great future for sporting purposes, because this element of nerve tension is absent. The driver enjoys the proceeding as much as his passengers, and probably more. He can make mistakes, even lapse in his attention, without any serious consequences. Winds no longer terrorize the airman. Newspaper readers will remember that, ten years ago, my brother and I carefully selected the days in which we made our flights. Some days, when there was too much wind, we would not fly at all. But we have learned now how to fly, and even strong gales do not now frighten the flyer. He goes up any time except in the very bad days. The only wind conditions that deter him now are the kind known as 'cyclonic,' when there are great twists in the atmosphere. Under these circumstances he does not fly."

FLY POISONS.—Well before the period when warm weather is likely to fill the house with flies, the United States Public Health Service has issued a small pamphlet entitled Experimental Studies With Various Fly-Destroying Agencies. The pamphlet contains the results of experiments with the so-called dangerous fly poisons; that is, those that are dangerous because of the chance that small children, or others who are ignorant of their poisonous character, may taste or swallow them. All those poisons the Health Service considers as unsafe, and discourages the use of them. The government experimenters found that among various agencies that they tested there were none more effective or less dangerous for household use than the one-to-five per cent solution of formaldehyde. The government instructions for preparing and using it are as follows: To a pint of water add three teaspoonfuls of commercial formaldehyde. It is not expensive, and can be bought at any drug store. Take one or more thin table tumblers and fill each one of them half full, or more, of the solution. Cut a piece of blotting paper into circular form, slightly smaller than an ordinary saucer. Place the blotting paper in the saucer and then invert the saucer over the tumbler; next, holding the hand on top of the tumbler and the saucer, quickly invert them. Then place a match under the edge of the tumbler. That will break the air seal and allow the fluid to percolate slowly into the blotting paper, and to keep it moist, so that the flies can drink from it. The experiments made by the government inspectors show that the solution in the strength mentioned is not repellent; on the contrary, it attracts flies, and usually kills them within two or three minutes.

WOLF'S COMET.—It is highly probable that sometime during the month of June we shall be able to see in the vicinity of the constellation of Pegasus Comet B 1916, which was discovered just within the orbit of Jupiter by Prof. Max Wolf of the University of Heidelberg on April 27, 1916, and which is one of the greatest known comets. When discovered it was about 400,000,000 miles from the earth, or more than four times as far as the sun is, and a greater distance than any other comet at the time of its discovery. The fact that it was visible at such a great distance, both from the sun and from the earth, makes it an object of deep interest to astronomers. Its motion is so slow that its possible orbits range from an ellipse, with a period of about fifty years, to an orbit slightly hyperbolic. Until it has been observed for a considerable time we shall not know whether it will ever return to the solar system. The number of comets that are discovered and recorded is enormous, but most of them are telescopic—that is, are visible only through the telescope. Those that are conspicuous are few. Comet B 1916, as its name indicates, was the second to appear in 1916. Periodic comets arrive approximately on schedule time, but some that travel in greatly elongated ellipses approach the sun only once in hundreds or even thousands of years. Donati's great comet, of 1858, takes two thousand years to complete its circuit. Halley's comet, which made its last return in 1910, has the longest period—seventy-six years—of any comet classed as periodic. Continued returns of periodic comets to the sun tend to reduce them greatly in size and brilliancy, which explains why Halley's comet, the largest and most noted of periodic comets, was such a disappointment in 1910.

Easy to Fill Just Press the Button

PARKER SAFETY-SEALED FOUNTAIN PEN

Drop ink tablet in water. New Parker Pat. Clip held in place like a washer. \$2.50, \$3, \$4, \$5 at leading dealers. Catalog free. Dissolves immediately into fluid ink.

SAFETY-SEALED—The new type "no holes in the wall" fountain pen. Ink can't get out to soil clothes or person.

PARKER INK TABLETS for a soldier's kit in place of fluid ink

PARKER PEN CO., 80 Mill St., Janesville, Wis., N. Y. Retail Store, Woolworth Bldg.

Makes 2 lbs. Butter
From 1 lb. Butter and 1 pt. Milk

THIS New Churn and Mixer will actually make two pounds of table butter from one pound of butter and one pint (one pound) of fresh milk. Anyone can do it by following the simple directions included with the

"Lightning-Sanitary" Churn and Mixer

It is easy to see that if butter is made to absorb its own weight of milk the product will be milk-charged butter twice the original weight and bulk. This butter is delicious for table use and is preferred by many because of its similarity to fresh butter right from the churn. It becomes hard and firm when put in a cool place and will keep from ten days to two weeks. The economy of this method will be at once apparent. It cuts the cost of your table butter in two.

The "Lightning-Sanitary" Churn and Mixer is made of glass with metal dasher. It is easily kept clean and has no wooden parts to absorb cream. The Churn and Mixer is equally suitable for making butter, beating eggs or cream, mixing salad dressing, or for use as a butter renovator. We have thoroughly tested it and find it to do all that is claimed by the manufacturer.

How To Get It FREE

Send us one new yearly subscription (not your own) for *The Youth's Companion* and we will present you with this "Lightning-Sanitary" Churn and Mixer, two-quart size. The Churn will be sent by express or parcel post, charges to be paid by receiver. If parcel-post shipment is desired, ask postmaster how much postage to send us for a 4-lb. package.

NOTE. This Churn is offered only to present Companion subscribers (not to agents) as payment for introducing the paper into a home where it has not been taken the past year.

Commonwealth Ave. and St. Paul St., Boston, Mass.

THE MODERN TREATMENT OF WOUNDS

SINCE the days of Lister, the famous English surgeon who taught the world the antiseptic treatment of wounds, such injuries have become far less dangerous to life. Formerly it was to be expected that wounds, whether produced by accident or by the knife of the surgeon, would suppurate and give trouble before the healing process could begin. Then came Lister with his theory that absolute antiseptics was possible, and his discovery that the formation of pus in a wound was always the result of infection and might be prevented.

In former times infection was often the result of carelessness on the part of the surgeon or the nurses, but no one realized that fact because no other result was considered as possible. But the medical profession long ago recognized the absolute truth of Lister's words, "Clean wounds heal up; unclean wounds suppurate and refuse to heal."

The awful war that is now raging in Europe has brought benefits to humanity as well as loss, and one of those benefits is the tremendous advance in surgery—an advance that in ordinary times would have taken many years. The wounds in modern warfare are so frightful, so destructive and so disfiguring that the surgeons have been stimulated to devise extraordinary methods of remedy. Many of the worst wounds are of the head and face, and the results of the remedial surgery in such cases are almost miraculous.

The antiseptic treatment of wounds has also taken great strides. Physicians have found that they can bring about healing in wounds that formerly they would have thought to be hopeless. The improved treatment is largely the work of a French surgeon, formerly resident in New York, Dr. Carrel, who not only makes a wound clean but keeps it so by subjecting it to a constant stream of some suitable antiseptic fluid, which bathes the entire wounded surface for days at a time. The treatment has not only saved much disfigurement but it has actually preserved many lives that in previous wars would have been lost.

HER SILHOUETTE

THE present revival of interest in silhouettes moved a recent writer, Mr. E. R. Lumsdale, to look into their first rise to popularity in France, somewhat more than a hundred and fifty years ago.

At that time Etienne de Silhouette was minister of finance, and an exceedingly unpopular minister he was. The times were hard, and his efforts at economy were perhaps bound to be disagreeable, even if they had been made with the greatest discretion, tact and wisdom. Falling in these, his new taxes to raise money and his skimping, scraping, cutting of salaries and dispensing with jobs to save it, alike produced irritation and discontent.

As the minister had, at first, the backing of a powerful party at court, his opponents had to be careful; their safest and most effective weapon was ridicule. Cheap fashions, abbreviated garments, tawdry ornaments, and finally portraits in profile and black shadow only, instead of oils, as theretofore, were dubbed *la mode Silhouette*. All these whimsies—coats, half-sleeved or tailless, rough country clubs in place of natty canes, skimped and ill-cut breeches—all passed and were soon forgotten, except the portraits *à la Silhouette*, which held their vogue long enough to become shortened for convenience to simple silhouettes.

In 1835, half a century and more after the demise of the unpopular minister of finance, his name, shorn of its capital, was considered, deliberated upon and finally accepted by the French Academy as a new and authentic word to be duly included in the national dictionary. Silhouettes are familiar treasures to-day in many an old New England family that never heard of M. de Silhouette.

An English bride, married to a wine merchant whose business necessitated many visits to France, wrote home to her sister about the picture she had had made when the new fashion was at its early height in Paris:

"So perhaps, my darling Sukey, after all these gayeties, you will not be surprised to be informed that your poor Fanny is reduced to the shadow of herself! 'Tis true, indeed, yet do not be too much dismayed. That you may judge for yourself there is no cause for alarm, I am going presently to send you the shadow! But to put you off no longer with quips from the interesting truth, it is this, Sukey, I have had my portrait done *à la Silhouette*. Every-one professes to be much pleased with it, but not so your unhappy Fan, who never knew till now the exact outline of her profile, and is far from satisfied with its most notable item, to wit, her nose! My nose! My nose! My nose, which I have ever considered quite suitable and becoming, only to find that it turns up as partly as any chamber-maid's or scullion's!"

"True, I had been told the extreme tip inclined slightly toward heaven rather than earth, which I was assured was rather an advantage to the feature—but the gallants who so assured me but

flattered with false words. I can be deceived no longer, thanks to the new fashion, which I was persuaded to adopt, thereby saving the great expense of a miniature in proper style. I never wish to see the thing again. You may have it and keep it; but if ever you wish to return the favor with a portrait of yourself, why, I would take any you would give me, Sukey; but your nose bears a family resemblance to mine, and if you are wise you will not let it be displayed *à la Silhouette*."

ROBERT LOUIS'S MOTHER

ALTHOUGH the mother of Robert Louis Stevenson was ordinarily shy and retiring of manner, as she had been taught that all ladies should be, there was one occurrence that made her conspicuous but that greatly pleased her. Mrs. Stevenson was twenty years her son's senior, says Miss Evelyn Blantyre Simpson in Robert Louis Stevenson's Edinburgh Days, and it amused and flattered them both that once when they went out to dinner together the servant, judging him too young to be married, turned a deaf ear to the names they gave, and announced them as Mr. and Miss Stevenson.

This "young" lady outlived her literary son, and so was able to enjoy much of his fame. The Stevenson Memorial meeting was the occasion on which she became conspicuous against her will. She started for the music hall not too early, feeling secure of a seat with a "reserve ticket" in her neatly gloved hand. When some one asked if she were going on the platform, she replied emphatically in the negative. She had early-Victorian ideas as to platforms being proper only for the sterner sex. She wished to sit unnoticed in the audience.

The crowd was beyond expectations. Mrs. Stevenson arrived to find every passage blocked and a surging mass at the main entrance clamoring for admittance. She feared that she, with them, should be turned away; but, as a forlorn hope, she appealed to a policeman to get her in.

"It's nae use, it's fu'," he said. "Reserve seats ta'en an hour ago by folks that had nae tickets, and they would na gang out."

"I must get in!" cried Mrs. Stevenson. "I've a right to get in! I am Robert Louis Stevenson's mother."

"Ay, you've the best right," the policeman replied, and, turning to the crowd, he cried, "Mak' way, there! She maun get in. She's Robert Louis's mither."

Persons who thought themselves packed too tightly to move somehow packed closer, and let Mrs. Stevenson squeeze and wriggle past. Breathless and, for once, with her mantle and bonnet a little awry, she was pushed on, much against her will, to the platform. There she hastened to so literal a back seat that when Lord Rosebery, at the beginning of his address, spoke the four telling words, "His mother is here," and turned round to bow with courtly deference to her, he had to pause and to engage other eyes as well as his own before he found to which side Robert Louis's mother had unobtrusively withdrawn.

Mrs. Stevenson was all aglow; she was visibly overcome by the unexpectedly large crowd and its tremendous enthusiasm. For once her usual calm left her.

NO MISTAKE MADE

SYDNEY PORTER, who is better known to the multitude of his admiring readers as O. Henry, possessed an innate nobleness of nature that prevented him from becoming bitter even after three years in prison on a charge of alleged embezzlement, of which he would undoubtedly have been acquitted had he not fled to South America to escape trial. His charity was boundless and his sympathy with suffering, especially when the sufferer was "down and out," as prompt and as instinctive as the glance of the eye, says Prof. C. A. Smith in his biography of O. Henry.

He was talking to a friend on the streets of New York one day when a beggar approached and asked for help. O. Henry took a coin from his pocket, shielded it from the view of his friend, and slipped it into the beggar's hand, saying:

"Here's a dollar. Don't bother us any more." The man walked a few steps away, examined the coin, and seemed uncertain what to do. Then he came slowly back.

"Mister," he said, "you were good to me and I don't want to take advantage of you. You said this was a dollar. It's a twenty-dollar gold piece."

O. Henry turned upon him indignantly. "Don't you think I know what a dollar is? I told you not to come back. Get along!"

He then continued his conversation, but was plainly mortified for fear that his friend had detected his ruse.

THEIR BOMB

WHEN the worst of the Zeppelin raid was over, says the Manchester Guardian, a resident went out into the town to see what damage had been done. In the darkness he heard a group of women talking loudly, and, judging them a clue not to be neglected, he followed them along an alley into the back yard of a house. The debate never ceased, but he was unable to get the gist of it until one of the women—the most eloquent—appealed directly to him.

"Ere," she said, "do you call it fair, I should like to know? T' bomb dropped in our yard, and a body's gone and took it away—never even give me a receipt for it. It's our bomb!"

INSUFFICIENTLY PROTECTED

MARY had been greatly interested in watching the men in her grandfather's orchard putting bands round the fruit trees to entrap the climbing caterpillars, and she had asked a great many questions.

Some weeks later, says the New Mexico Journal of Education, when she was in the city with her mother, she noticed a man who wore a mourning band round his sleeve.

"Mamma," she asked, "what's to keep them from crawling up his other arm?"

YES, SUH!

"T'S this way in the black-land belt now," said the New York Evening Post's friend from Texas: "Cotton's so high that a farmer comes into Dallas, eats a square meal at one of the best hotels, puts down a cotton seed, and gets fifteen cents change. Yes, suh!"

BLUE STREAKS

TRADE MARK REG. U. S. PAT. OFF.

Why Some Dealers Don't Handle Goodyear Blue Streak Bicycle Tires

Bicycle riders have been paying too much for their tires. And the tires have not been good enough.

High profits have been to blame. And, too many brands of tires, too.

But now Goodyear comes out with a really good tire—the Blue Streak—which costs the rider only \$3.25 each. It is as good as some other tires that cost \$5.00 each, and better than most that equal it in price. It means big savings for the rider.

Naturally, some dealers refuse to handle Goodyear Blue Streaks. They want a higher profit on each tire.

But those dealers who *do* sell you Blue Streaks—and there are many of them—place your satisfaction ahead of their own profit. Find the Goodyear dealer in your town. The fact that he has Blue Streaks for sale means he is a square deal merchant.

Boys everywhere are wearing Goodyear Bicycle Caps. Ask your dealer. They're specially popular with Bicycle Clubs—name of club printed on the cap.

The Goodyear Tire & Rubber Company, Akron, Ohio

Long Wear Pleases Dad

You will find your Goodyear Blue Streaks wearing a good long time. There are many miles of happy travel in these tough, rugged tires, built with two stout reinforcing strips of fabric beneath the tread. The strong two-ply tire body has wonderful durability. Such a long wearing tire is most economical.

Non-Skid Treads Save Side-Slipping

Goodyear Blue Streaks are made with sharp-edged blocks of rugged rubber that bite the ground like teeth, in travel. Side-slipping is prevented. Besides, these stout rubber blocks add to the life of the tire. Press your thumb on a Blue Streak Tread. You can feel the "bite."

See your Goodyear Dealer or write The Goodyear Tire & Rubber Co., Akron, Ohio, for his address.

Handsome Tires—Show Your Friends

Blue Streaks are good-looking as well as long-wearing and easy-riding. They put your bike on parade—make it look like new. You will know Goodyear Blue Streaks by the smart Blue Streak on each side of the tire.

Springy Tires Make Pedaling Fun

No boy likes to push a bicycle with heavy, clumsy tires. So Goodyear Blue Streaks are made of fine two-ply fabric carried in lively rubber. That gives you strength and extreme lightness in your tire. Such a resilient tire makes pedaling easy. The tire shares the job with your legs.

Lift Corns out with Fingers

A few drops of Freezone applied directly upon a tender, aching corn stops the soreness at once and soon the entire corn or callus loosens and can be lifted off with the fingers without even a twinge of pain.

Freezone

Removes hard corns, soft corns, also corns between the toes and hardened calluses. Does not irritate or inflame the surrounding skin or tissue. You feel no pain when applying it or afterward.

Women! Keep a small bottle of Freezone on your dresser and never let a corn ache twice.

Small bottles can be had at any drug store in the U. S. or Canada

THE EDWARD WESLEY CO. Cincinnati, Ohio

Young Men, Learn a Trade

The Pratt & Whitney Company has several vacancies in the Apprenticeship Course and would be glad to receive applications from young men who would appreciate an opportunity to learn a trade under very favorable circumstances. Courses are given covering the work of the Pattern Shop, Foundry, Machine Shop and Drawing Room, each including classroom instruction with the shop experience. Generous wages make all apprentices self-supporting. Athletics are encouraged.

Candidates must be at least sixteen years old, of good health and character, and having the equivalent of a grammar-school education. Address

Supervisor of Apprentices,
PRATT & WHITNEY CO., Hartford, Conn.

THE MEDALIST OF THE MEADOW

By Harriette Wilbur

DRAWINGS BY
WALT HARRIS

WHENEVER I see a meadow lark posed on a prominent perch in the bright sunlight, I wonder how he came by the medal he so proudly displays, with commands to "See! See! Oh, see what I have on!"

The meadow lark is a companionable bird. Spring after spring we children welcomed his rousing "Spring o' the year!" yodel, and then trudged an Iowa country road to and from school to his mischievous chant of "I see! see! I see your petticoat!" as he stood craning his head from the grass of the near-by pasture, or from a more elevated stone or post or bush.

The river meadow was a favorite playground, which the birds generously shared with us, if we kept a respectful distance. One day in early spring we noticed several meadow larks acting strangely there. Each stood for a short time with its head close to the ground and its beak thrust into the soft earth; then it lifted its head, took a step, and buried its bill again. We followed them, and found many little holes in the moist ground, as if a pencil had been poked into it here and there. We thought they were drinking, but since then have accepted Maj. Bendire's explanation of such borings by the Western meadow lark as a search for buried insect eggs and larvae. If the meadow lark begins feeding on such pests before they can get awing, he deserves a still larger medal.

The spring when I first taught at a country school I made the intimate acquaintance of a meadow-lark family. For a week or two one of the birds had been practicing his piccolo on the fence. There he would sit, on a post near a dogwood clump, in a sort of enraptured ecstasy, with head raised and beak pointed skyward, running over his musical yodel—a clear, ringing, flutelike whistle repeated *ad libitum*, with a short rhetorical pause between phrases.

One morning, to see what he would do, I mimicked him. He dropped his head and glanced about.

"Quit! quit!" he sputtered to himself, twitching his tail nervously. Then he turned his back and, flashing indignation with his white tail feathers, dived into the grass. He crept out of sight like a flustered field mouse, scolding musically to himself even when hidden.

When I passed by later, he was fluting as before. I mimicked him again. He cocked his ear, but did not fly away, and when I called a second time he located the source of the disturbance. He flew to the next post farther on, and sang again. But in shifting posts, he had changed songs; this one was two notes short and with a questioning lift at the close.

Soon we were good friends, and he often flew on ahead of me, from post to post, for some little distance. Usually he would sing the same song all the way, but occasionally he would change keys, or end a phrase abruptly, or vary the close with a chuckle just loud enough to be heard near by.

One day, after a long search, I found the nest, a scant twenty feet from the dogwood. My plan was to take a few steps, then look for anything that appeared unusual. At last I noticed a slight depression in the fresh grass, like a faint pathway. It was more than a foot in length, and ended abruptly in a tuft of grass beside a stone. I stooped to investigate, and met the bright eyes of a brooding meadow lark. She sat close for an instant, then sprang up with an alarmed *quit-t-t-t-t!* and ran down the little path while getting under way for her quail-like spring into the air. Her mate, who had lingered about quiet and suspicious, joined her, and they flew away *tut-tutting* to each other.

There were four eggs, white with purplish-brown signatures round the larger end, resting on a soft grassy bed. The mother, an artist in her own right, had burrowed into the tuft from the side, giving the cradle an arched, matted roof and a well-carpeted floor.

The young that hatched out a week later were ugly beings—lumpish, overlarge, clad in ragged, scanty brownish-gray Canton flannel pyjamas and with long flesh-colored beaks lined with bright red that showed up well at

feeding time. For several days their eyes were blinded by a thin, opaque membrane; until they could see they seemed unconscious of my presence, but as soon as they got their sight they showed fear and resentment in a unique manner. Each one would crouch down with its eyes closed, its covering of mixed down and feathers bristling, and its head drawn back between its shoulders and pressed closely to the breast; and in place of a harmless nestling would be a good imitation of a defiant box tortoise.

Gradually the babies feathered into a graceful, meadow-larkish appearance, and became extremely "handy with their feet." Before they could fly, they had acquired the pretty family characteristic of stepping daintily along with the head high and the chest out, like a trained pedestrian. They were good walkers before they could rise from the ground, and they fairly obliterated the pathway to their sleeping quarters with their constant tramping. When I paid them my last visit they were dodging about the family estate as merrily as so many light-hearted boys. And nature had rewarded their piping attempts on the flute by hanging faint copies of the family locket about their necks.

The next spring I was attending school, rooming but a few doors from a road that skirted an ideal meadow-lark field. And every morning for weeks I was entertained by a certain *Sturnella magna* that sang loud and long from a telephone pole on the edge of the campus. Sometimes he came to this favored spot for an evening song, as well. A day that opens and closes with a meadow-lark's song cannot go wholly wrong—there is so much of benediction in the way he mounts the highest conspicuous perch he can find, and lifts his face skyward. The fervor of his intonation makes one look up; his whole posture and manner bid one lift the heart in unison with his voice.

I am particularly fond of the meadow lark in North Dakota at harvest time, when he takes his ease on a bundle of golden grain, or on some post overlooking a vast stretch of pedestrian shoeks stalking along toward the distant horizon, the embodiment of well-earned content. Like the farmer, he stands there, arms akimbo, estimating the yield per acre in round numbers of victorious song that seem to echo against the very Rockies themselves. And considering the numberless insects and weed seeds he has thrust down baby throats, or made way with himself, no other person except the farmer has a better right to the field.

"You should see the meadow lark in California," adds a friend, who has spent some time there. "For the Western variety of the bird, *Sturnella magna neglecta*, as ornithologists name him, is an even more beautiful singer. His song is a rich, musical, flutelike cadenza of eight or ten notes, with intricate trills and delicate grace notes. If you could put California's sapphire skies, crystal-clear air, gorgeous blossoms, rushing mountain

streams and magnificent distances into a rippling measure of sound, you would have his song—or songs, rather, for I have heard the same bird sing half a dozen different songs. In color he differs somewhat from the Eastern bird; he has minted more of California's gold into the earth-brown of his coat, and so is yellower and sunnier.

"He seems even less timid out there, too. With true Western hospitality, he makes you welcome, tells you he is glad to see you, and puts himself out to please you. He will fly before you as you drive along a country road, sometimes for a mile or more, if your speed be reasonable, escorting you on your way with a good-will message. He will sing merrily from some perch, with head raised as you pass, to all appearance oblivious of human presence. But when you have come up with him, he spreads his wings and with a 'follow-me' flirt of his gleaming tail feathers, often singing as he goes, he spurts ahead, and a few rods farther on there he is again, on a fence post or stone or bush, waiting for you to catch up and encouraging you meanwhile with a song."

A meadow lark is a meadow lark wherever

found, it seems; that is one of his best traits, and makes him admirable in every respect. One enthusiast, believing his medal is honestly come by, even proposes him for our national bird.

AN ATROCIOUS COMMISSION

TRAVELING the roads of the Queensland backwoods, writes Mr. Norman Duncan in Australian Byways, we encountered a blackfellow shuffling through the dust from his reservation to the town. He was an old man,—an old, old man,—in reservation rags, with a countenance so ugly that it was altogether shocking to the composure.

Near by this town, long ago, this man's tribe had murdered a family of settlers in the night, save one lad, who escaped death by opportunely tumbling to the floor between the bed and the wall, wounded, unconscious, and left for dead. What the provocation was no one knows, but probably it was undertaken upon savage impulse. Whatever the case, the boy, having thus narrowly survived, made his way to Brisbane, where he related his story to the authorities, and to such good purpose, as it turned out, that he was given a ride and free leave to return to his district and shoot as many blackfellows as he could manage, being heartily assured that the law would not molest him.

"You see," said our fellow traveler, "he was regularly licensed."

"By the Department of Game and Fisheries?" I scoffed.

"Ah, come now!" he replied. "I am not joking. I do not mean to say," he went on, "that the authorities gave this boy an engrossed license, suitable for framing, but I do assert that they commissioned him to kill blackfellows, and that his commission was not altogether singular, but one of a good many. And he did kill blackfellows—hundreds of them, possibly. He killed them where he could find them, running in the bush, or employed on the stations, not even hesitating in the presence of their white masters. And by and by the thing became a nuisance. It was awkward for the station owners to have their blackboys disposed of in this way. There were complaints. I recall that one station owner had his best black servant shot from the saddle on the road. He was very angry; but the boy flourished his commission, and the station owner could do nothing about it. The end of it was that the boy was summoned to Brisbane and bought off. The old blackfellow whom we passed a few moments ago boasts that he was once pursued by this industrious youngster. And he had a narrow escape. He says that he took to the river, and that he submerged himself, breathing meanwhile through a reed, until the hunt was given up."

THE PASTEUR EXHIBIT

AN exhibition of chemical products that the Evening Post tells us was held at the American Museum of Natural History in New York recently, had apparatus that Joseph Priestley used in the experiments that led to his discovery of oxygen in 1774, the schedule of his personal effects that he made for customs entry when he landed from England at the port of New York on June 4, 1794, and numerous specimens of rare chemical products, ores and dyestuffs. It is an interesting commentary on the difficulties under which Priestley worked that his glass test tubes show signs of frequent mending where there were breaks and cracks. Modern experimenters would have thrown the broken tubes away and taken fresh ones. Priestley was forced to be economical.

One entire case is devoted to Louis Pasteur, and the exhibits range from his early work on crystals to the work on microbes and communicable diseases that made him world famous. There are wooden models of the asymmetric crystals of sodium ammonium tartrate, on which Pasteur did his first important work, and near them are the curiously twisted Pasteur tubes with which he analyzed the air for microbes. In these tubes he sterilized fermentable liquids, and then broke the ends of the tubes, thereby allowing the air that was to be sampled to rush in bearing its microbes. Near by, in sealed test tubes, containing cloudy yellowish liquids, are cultures of the microbes of which Pasteur was the discoverer. There is the anthrax germ, and the microbe of fowl cholera, and, in carmine and crimson solutions, various fermentation organisms.

The means by which Pasteur first established the germ theory of communicable diseases are also shown in the Pasteur case. Here are healthy silkworms beside those suffering from the epidemic malady known as *pébrine*. It was the investigation of that disease that convinced Pasteur of the truth of his theories. There is, besides, a small flask presented by the United States Public Health Service, containing the antirabic virus, one of Pasteur's most important contributions to the science of serum therapy. Autograph letters from Pasteur, in the same case, make clear his interest in the work of other scientists and the high standards he set himself.

THE wide parlor of the parsonage was very cool and dim and restful after the glare of the June sunlight outside. White curtains swayed at the open windows. Roses in a glass bowl dropped their petals on the polished top of the table, which was heaped with books. The walls were covered with a delightful paper whereupon scenes from the Orient ran one into the other and repeated themselves from floor to ceiling—minarets and turbaned pilgrims and boats floating on winding rivers.

The child, who had been sitting motionless in one of the chairs against the wall, turned and rather timidly began to trace the pattern of the paper behind her with her finger.

"Don't, Ettie!" impatiently said the young woman who sat opposite her.

Esther Blake was a pretty young woman, very neat and trim in her close bonnet and shawl, with her dark hair looped smoothly over her ears in the fashion of the time. The sombre expression on her face was lightened now by an occasional gleam of vague expectancy.

The child desisted, and sat swinging her little feet in dogged patience.

Upstairs a door opened, and there came the sound of laughing voices and the quick patter of childish feet. Then there were light footsteps on the stairs, and the minister's wife, cool and fresh in her white gown and lilac ribbons, entered the parlor.

"I am so sorry," she said, in answer to her visitor's question. "Mr. Barclay has gone out, and I don't know where the papers are that he wanted copied. He told me that your brother was to do them, and how glad he was to find so good a copyist."

She knew that Esther's brother was no less glad to have the work to do. Still a young man, strong and active, he had virtually lost the use of his lower limbs through an attack of paralysis, and now depended upon his quick brain and his clever fingers to support his little family. His wife had died three years before; since then Esther had kept his house and taken care of his children.

"Let me see," said Lucy. "Mr. Barclay might bring the papers round to you himself; or —"

"I could call again," said Esther, with half-veiled eagerness.

"I will have them ready for you, then. I am going away, you see."

"You are going away!" repeated Esther blankly.

"Yes. I am going home—to my own old home, you know, at Rivermouth. It is ever so long since I have been there, and all my old friends are planning to give me the greatest good time—tea parties and sailing parties and picnics. I shall be so gay I shall not know myself."

Esther looked at her enviously. "If I had a home like that," she said, "I'd stay there."

"Oh, no!" said Lucy, laughing. "My work is here. You can't imagine how many things I have to do all the time—meetings and committees and classes and calls—something every minute. But for a little I mean to run away from it all. Must you go?" Esther had risen suddenly. "I am so sorry you had the long walk in the heat. Don't come again; I'll see that your brother has the papers."

"Ettie!" said Esther.

Her voice was sharp; but the child ran to her and, confidingly taking her

"DON'T YOU THINK, ESTHER, THAT YOU MIGHT SOMETIMES—MISS IT, TOO?"

STORIES OF A MINISTER'S WIFE

By Margaret Johnson

IV. THE SILVER KEY

hand, looked up with shy eyes at the minister's wife.

"This is your namesake—a dear little girl," said Lucy warmly. "She is a little older than my Mary, I think; and the youngest must be about my baby's age. I remember you told me he was three."

The girl's face softened. "Yes. He's real cunning," she said. "If you could come —"

"I will. Of course I will come and see you all—when I get back from Rivermouth."

Lucy did not understand the look, half of appeal, half of disappointment and defiance, that came into Esther's face as she turned abruptly and went out. Upstairs, going to and fro in the cool rooms with the things for her trunk, Lucy remembered it, and wondered.

"There's another reason why I shouldn't go away!" she complained to good Aunt Persis, who was to take charge of the parsonage and the parson and the parson's children while the mistress was away. "That girl will be on my mind all the time."

"Nonsense! You need a change from having people on your mind."

"You are all so sure," said Lucy, "and so good about my going. I haven't fairly stopped to think whether I ought to go or not. There's the Mothers' Meeting on Tuesday—you'll have to run that, Aunt Persis—and the Monthly Missionary in the evening, and the Teachers' Conference and the choir rehearsal to-night, and the music on Sunday; and Wednesday's my day at the Boys' Home, and Thursday mornings I always read to old Mrs. Sullivan; and the Apron Sale and Sociable Friday evening, and the Ladies' Aid

and the Girls' Guild—besides William and the babies!"

"Never mind—once you get out in a boat on the bay with your brother John and the others, you'll forget all about your meetings and your mothers, my dear."

Through the white dust of the sunny road Esther Blake walked homeward with a dragging step. Her heart was a dull weight within her. The vague hope of help that had throbbed in her suddenly the Sunday before as, sitting in church, she had gazed at Mrs. Barclay's lovely and serene young face, had left her. She was thrown back upon the troublous waves of her own doubt and discontent.

One thing only was clear to her mind: the minister's wife was going away, too. The minister's wife was glad to escape from the irksome round of duty; she was so full of her expected pleasure that she had no ears even for the confidence that Esther had very mistily imagined possible. The girl scorned herself now for the thought. She had supposed that the minister's wife, at least, was satisfied with her lot; she had thought that perhaps the minister's wife might even hold in her gentle hand the silver key that should unlock the door of content for another, who was struggling blindly and bitterly to find the way. But no!

"If she can't stand it," Esther said to herself, walking faster in a kind of fierce triumph, "if she wants to get away from home and have a good time, I guess it isn't strange that I do. The same old things every day,—the same people, no fun or variety,—always just the house and Robert and the children."

The thought of Robert laid

a painful grip upon her heart; but she shook it off defiantly. Because he was tied to his chair and his crutches, was it fair that she should be tied to him? And the children were not hers. Why should she be responsible for other people's burdens? She had borne them long enough.

In the home that Cousin Susan offered her in the city, there would be work, of course; but there would be change and novelty—perhaps the pleasures that she had dreamed of. Why should she not take her chance and go?

"Ettie, come here and put your bonnet on!"

She saw that the sun was beating hot on the child's bare head. She stooped and tied the bonnet herself and carefully smoothed back the damp hair from the rosy face. The habit of protection was strong in her. But—the minister's wife was going away, too!

Gloved and bonneted, Mrs. Barclay looked in at her husband's study on her way downstairs. It was Saturday, and the minister was battling with one of those doctrinal sermons that he conscientiously preached from time to time instead of the more practical and personal appeals that his soul—and his people—loved.

"Good-by again, dear!" she cried to him. "No; you are not to go to the station with me. Maggie is going to carry my bag down, and I won't have you disturbed. The children seem very good, and I think you and Aunt Persis will be able to manage all right just for these few days."

"Of course we shall," said the Rev. William valiantly, although the grimmest doctrinal difficulty seemed to him a stumblingblock not worth considering when compared with the household problems that loomed fearfully on his immediate horizon. Nevertheless, when he had closed the door on his wife's sunny face, he found his sermon so plunged in gloom that he threw it aside, and set patiently about finding a more inspiring theme.

Lucy walked on to the station. She was early for her train. Going out on the platform to wait, she found a solitary figure already there, sitting, bag in hand, on a bench.

"Why, Esther, you are going away!" she began; and then something in the girl's attitude, in her furtive, startled look, and perhaps something in her own half-reproachful memory, smote her with an instant conviction.

"I wish that we were traveling together," she said quickly, and sat down beside Esther. The girl moved away a little.

"You needn't be kind to me, Mrs. Barclay," she said suddenly. "Because—you'd know it sooner or later, anyway—I am running away!"

"Oh, are you?" said Lucy. "And where are you running to?"

She spoke brightly, trying to think what she should do.

"I am going to my cousin's in the city," Esther answered defiantly. "I'm sick and tired of it here; it's dull and stupid, and Robert nags me—I won't stand it any longer! It's all right for me to go, and I'm going; but I didn't tell Robert. I've left a letter for him to get to-night. He'll make a fuss, but I can't help it—he doesn't understand."

"No," said Mrs. Barclay in a gentle tone, "people don't always see things the way we do ourselves. He can get along well enough without you, I suppose."

"He'll have some one else," said

"YOUR uncle was here this morning," said Mrs. Dean to Charity in the hall. "He came down on the trolley to see whether Granny Allan can remember anything about a cloud-burst seventy-five years ago that washed out the gulch over at Allan's Corners. It has something to do with a lawsuit, and he wants an account of it for his newspaper. I told him that you graduated in June, but he didn't even seem to hear me. All he would talk about was Granny Allan and his paper—and you his only niece!"

Charity laughed and reached for her worn fur that hung on the hall rack. "What's an only niece compared with an only newspaper, mother? If you want uncle to listen, talk about that new paper of his! But if he does come to the graduation exercises, I hope he'll like Joan of Arc. I've spent lots of time trying to make Joan interesting."

Joan's biographer opened the outer door. "I'm off to a senior class meeting now to help devise ways and means for the other nine to spend money."

"He has no relatives except Charity," Mrs. Dean said to herself rebelliously, when the girl had gone; "and he's sinking his money in a newspaper, when the county already has two and doesn't need another. The dear girl goes without so much that her friends have—and all the other girls in her class are going to Melrose Seminary next fall—but there! I wouldn't have her a bit less independent."

Considering its object, the senior class meeting was successful. The ten seniors were all present, and, with a cheerful disregard for the pocketbooks of their parents, nine of them voted a large class tax, a class photograph, a class excursion, a class pin, hothouse flowers for graduation day and engraved invitations. The tenth voted with the others, although she knew that none of the motions would mean anything to her except the one that concerned the class tax.

"I'm so glad," Amy Terry whispered to Charity, "that the class is equally divided, because our dresses will show off so much better against the boys' black clothes!"

"That's so!" exclaimed Kate Brown, who had overheard. "Aunt Annie has promised me a love of a pink silk mull for class day."

A few moments later the boys departed hastily for baseball practice. The girls gathered round Charity Dean.

"I do wish," began Lucy Sanford, "that we might all have cream-colored serge suits for baccalaureate Sunday. Think how—how harmonious we'd look with a black boy and a cream-colored girl marching together! Now, what are you all laughing about?"

She received no explanation, however, for Charity Dean was speaking. There was a strange expression on Charity's face, but the light tone in which she spoke set everyone at ease—except herself.

"Lucy, you'll have to allow for one note of discord in your harmony of black and cream. If the day is cold, I shall wear the elegant black coat that mother has made over for me twice already. If it's hot, I shall appear wreathed in smiles and a scrumptious new white cotton voile. The cotton voile will also loom large in the public eye on class day and on graduation day; but don't you dare, any of you, to disappoint me by not having serge suits and colored silk class-day gowns and white silk mulls and things for graduation day. I shall be proud of you."

Pris Kilroy projected herself bodily on the speaker. "You—old—dear!" she cried, hugging her. "We're all proud of your brains. Father said last night that he didn't pretend to write a letter down at the store. He said you could write an order for wire clothesline so effectively that the wholesale house would fall over itself to deliver the goods!"

Pris referred to the work that Charity Dean

MOVING THE MOUNTAIN

By Alice Louise Lee

was doing after school hours in the office of the hardware store that her father owned.

When, half an hour later, Charity returned home, she found that her uncle, Jackson Dean, the publisher and editor of the New County Independent, had dropped in again. He was a little man with large opinions.

"Come to commencement?" he growled. "I suppose I must, in order to put an account of it in the Independent. Not that I care to

the tenth there. The tenth seemed to employ all her spare time in walking. She was seized with a mysterious interest in the township and in the old people on the highroads and distant byroads.

April and May passed and June announced itself by its sunshine and flowers and graduations. In New Berne the ten anxious members of the senior class met and consulted and took divers examinations and went to divers tailors and dressmakers; that

is, nine of them went. The tenth gathered a multitude of notes about her, and sorted, wrote and destroyed and wrote again, encouraged by her mother and teachers—the only ones who knew of her sudden change of subject. The nine seniors learned of it only when they met to prepare the commencement programme for the printer.

"I'm sure, Chat, I don't know what you have found of interest in this little old burg," exclaimed Bert Hubbell frankly, "but you have a way of dashing off the most interesting things —"

"Well, I can tell you this, Bert Hubbell!" Charity exclaimed. "I have spent over two months working on material to go into a paper that I can read in a quarter of an hour, if you call that 'dashing things off'!"

"MY NIECE'S PAPER," HE CRIED, "WILL REACH THE COUNTY THROUGH THE COLUMNS OF THE INDEPENDENT!"

hear a word that's said. The girls don't think of anything except what they're going to wear and the boys have their minds filled up with baseball. Eh?" He turned to Charity. "Am I right? Don't the girls in your class know already what they're going to wear?"

"Y-yes, they do," replied Charity. "Just so! What are the subjects of their essays, eh?"

Charity smiled uncomfortably. "They have not selected them yet—that is, only one has." Uncle Jackson turned in triumph to his sister-in-law. "What did I tell you! And I know what the papers will be when they are written at the eleventh hour. Some of 'em will be rehashes of the biographies of noted people, and the rest will tell how to make a success of life and how to run the country! Paugh! Why don't these aspiring graduates take some simple local subject that they can learn about first-hand. That would interest the audience! No, I can't stay to supper. Good-by!"

Charity, looking a little dazed, followed her uncle to the door, but she said nothing.

"Mother, uncle is right about our commencement papers," she said suddenly at the supper table. "I'm going to give up Joan of Arc."

"Why, Charity Dean!" cried Mrs. Dean. "You have worked on her for weeks!"

"Well, there are eight weeks left. As long as I can't interest the eyes of the audience as the other four girls will, I must interest their ears—and, without knowing it, uncle has given me a subject, too."

What that subject was, the rest of the class remained long in ignorance. The other nine seniors, when they could no longer avoid selecting subjects, haunted the library with sighs and lamentations, but they never saw

Bert rumbled his hair. "I'll take it all back, Chat. There's more drudgery than dash in that; but I'm awfully curious to know what you've found to say about New Berne."

Bert Hubbell's curiosity was shared by every one of the throng that met in the town hall one Wednesday afternoon late in June and that sat, programme in hand, watching the ten seniors take their places on the flower-decked platform. The programme read much as Uncle Jackson had predicted; but there was one line at the very end, where, for reasons known to themselves, the faculty had insisted on its being placed, that did not accord with it at all. That line read:

"Old New Berne, by Charity Dean."

She was the tenth in the row of graduates, and wore her cotton voile and home-grown flowers, but her cheeks were pink and her eyes were bright with excitement.

"Charity looks as well as the rest," her mother whispered jealously to Uncle Jackson.

"Hey? What? Looks well? Why not? They all look alike—all dressed in white. I'd rather she'd sound well!"

Pushing his spectacles up on his nose, Uncle Jackson settled himself in his seat and prepared to endure things.

And endure he did—visibly—while Bert Hubbell dictated a policy to the President and Kate Brown gave an account of Beethoven, beginning at the date of his birth and ending

with the date of his death—and so on down the line of ten until Charity rose. Then, for the first time, he noticed her subject on the programme and, pursing his lips, wondered what was going to happen. Charity did not leave him or the audience long in doubt.

Stepping to the front of the stage, she began in a clear voice: "One hundred years ago last month, an ox team drew a big covered wagon out of Berne, Connecticut. Under the wagon swung kettles and skillets. On top of the cover were lashed farming tools and a cradle. Inside, were feather beds and chairs and food, a baby and a grandmother. Riding behind the wagon on horseback, was the baby's mother. Walking and guiding the oxen, was the baby's father. That baby's granddaughter sits behind me this afternoon, for Thomas Mallory Kilroy was the driver of the ox team and the first settler of New Berne."

"Good gracious!" murmured Pris Kilroy.

A ripple of interest ran through the audience; Uncle Jackson leaned forward and polished his glasses with his handkerchief.

As Charity went on, the interest in her account grew steadily. With infinite pains, she had gathered the past of New Berne from the oldest inhabitants, and had skillfully pieced together their broken recollections and the tales they had heard their fathers tell. The audience saw log cabins in clearings where their own pleasant houses now stood; they heard the wolves howl again in their fields and saw the Indians ranging the country again on the war-path. They saw the old stagecoach with its four horses rattle down the street outside the hall—formerly the old Milford and Owego turnpike—and stop at a spot not far away, where long ago a tavern had stood, owned by Bert Hubbell's great-grandfather. They entered the first schoolhouse in the township, presided over by Kate Brown's great-aunt.

When Charity finished, the audience broke into a hum of affirmation, denial, exclamation and amusement. The dignified order of the exercises was interrupted. The moment Charity sat down, two of the oldest men in the audience were on their feet and offered sundry corrections and additions.

The president of the school board was sure that he had heard his great-aunt say that the stagecoach did not come in on the old turnpike, and, in trying to prove his point, he forgot to present the diplomas. When he was reminded of his omission, he could not for some time remember where he had laid them, and when he at last did find them Uncle Jackson was declaring aggressively that the settlers did follow the turnpike. That so upset the president of the board that he forgot his presentation speech and handed out the diplomas in an agitated silence.

As the president handed Charity her diploma, a man in the rear of the hall rose and said he considered that Miss Dean's paper would be of interest to the county at large, and that as the Democrat welcomed such articles of local interest he would move —

The motion was never made, for Uncle Jackson had got hastily to his feet. "My niece's paper," he cried, with a proud emphasis on the first two words, "will reach the county through the columns of the Independent! Therefore, it is useless for the gentleman to continue his motion."

The moment the exercises were brought to a confused close, Bert Hubbell turned to Charity. "Well, if you didn't dash that paper off, you certainly did dash the audience! Hear 'em buzz! Where'd you get that idea, anyway?"

"From Uncle Jackson—when his back was turned," said Charity, laughing.

Uncle Jackson was standing in her path as she left the platform. In one hand he held his spectacles; with the other he was rumpling up his hair. He wasted no time in commending her paper, but drew her hastily to one side.

When Charity joined her mother, her eyes shone and her words tumbled over one another.

"Mother! O mother! Uncle Jackson wants me to help him do things like this for his newspaper. He thinks they will make a great hit. He wants other townships written up this summer. He's coming to-morrow to see us about it and to make arrangements for our moving to Melrose—and, O mother, the seminary is at Melrose, and he says I must do well in the school because he's one of the trustees!"

Esther curtly. "I told him I needed some help, and he hired a woman; she's there now."

"You're very fortunate," said Lucy. "It is generally hard to find just the right person for such a place. Are the children fond of her?"

Esther winced. "They'll get to be."

"Oh, yes!" said Lucy cheerfully. "Children miss a person they love—at first; but they will forget you after a while, of course. We have to choose sometimes between different things, and one compensates for another. The city is always gay and lively; and if you lose the children's love, and your brother's, and your place here as the mistress of your little home, why, there are the shops, you know, and things like that, to make up."

Esther's face was white. She had been prepared to argue, but not to be argued for, like this.

"The woman you have hired," Lucy went

on, "has she learned your brother's little ways? I suppose he has them—men always have. Mr. Barclay thinks that if he hasn't his table and chair just so he can't write a word of his sermon."

Esther smiled a little, off her guard. "Robert's like that, too. He wants his coffee always in the same cup; and when we read evenings he has to have the little old lamp with the painted shade."

"It's hard to tell just what gives us the feeling of coziness—the home feeling," said Lucy softly. "I suppose that gives it to Robert—just that—the little old lamp, and you on the other side of it. He would miss it, of course, if it were taken away from him."

Esther looked off along the railway track. Her eyes were near to tears.

Lucy leaned forward and laid her hand on

the girl's arm. "Don't you think, Esther, that you might sometimes—miss it, too?"

Esther turned upon her suddenly. Her defiant eyes met Lucy's, grave, compassionate, and the veil fell from between them.

"Perhaps I shall miss it. But I can't help it. I've made up my mind to go. And you're running away, too!"

"I!" said Lucy, astonished. "Why, my dear —"

"You want a good time, too, if you are a minister's wife. You are tired of it here, always doing things for other people. Oh, I don't blame you; it's stupid—tiresome. You want to get away, and leave it all behind."

Lucy could not speak for a moment. The girl's words had brought a sudden light to her. She realized with a keenness that was almost a pang how much her work really

meant to her—the home, the life that had come to be her own, into which her heart had struck its roots deep—deep. Tired of it, that work, that life! It stretched before her now, fair, gracious—body, to be sure, and demanding every faculty of bus and of brain, but filled with interest, warm with love, rich with opportunity!

With that realization came another. Not without travail had she won her contentment. In a flash she saw that all experience is for inspiration, that power is born of pain and that out of struggle grows the passionate desire to help.

The rush of an incoming train startled her. Esther sprang from her side with a cry. At the other end of the platform two little figures approaching, stopped, bewildered by the sudden noise, loosed hands and ran apart. The train

was coming swiftly, the platform was narrow, and other passengers hurried to and fro. Lucy ran toward one little figure and Esther pursued the other. When the train passed on, after a brief stop, the two women met, each with a child, safe, dusty, disheveled, in her arms.

"They followed me!" said Esther, half sobbing. "Ettie ought to have known better. I shall have time to take them to the corner, and from there they can go back alone."

"Oh, no!" said Lucy. "Don't send them right away. Let them stay a little."

"I'm—going!" said Esther; her face was set sharply.

"Of course. But you may as well see what you can of the children first. They can go back alone; they will have to learn to take care of themselves now, anyway. Or I can take them when I go."

She sat down again on the bench. Esther watched her jealously as she caressed little Robby's chubby arm. "You needn't," she began, and then started. "Mrs. Barclay, that was your train? You've lost it! You can't go home!"

Home! Lucy could have smiled at the gladness in her heart. It was absurd—childish; but it was there. She might still make her visit some time; but this was a reprieve. She

turned to the girl, who still regarded her with a look of doubt and wonder in her eyes.

"There isn't another train to-day that makes the connection, and I'm glad I can't go," Lucy said. "I believe I have been homesick all the time at the thought of going. I'd rather have the Mothers' Meeting and my morning with Mrs. Sullivan and my choir, to say nothing of my husband and the babies, than go to forty picnics." She laid her hand on the girl's arm. "Esther, believe me, there isn't any pleasure in the world like that of having people need you,—I've learned that,—like having a little place of your own and being wanted in it. That is home, and that is happiness. If you leave your brother and these children, who love you, who will forget you if you will let them —"

She stopped; for Esther's defiant head had dropped upon her breast. It was not so much what Lucy said—it was the conviction that spoke in her eyes and her voice—the conviction of experience, of passionate sincerity. And the minister's wife had lost her outing—she had let the train go by—she cared enough for that! But Esther had made up her mind—if only the children were not there!

Catching little Robby up in her arms, she lowered her face to his curly head.

"Don't cry, auntie!" said Ettie, pressing tenderly into the circle of her arm.

Lucy leaned nearer.

"If you would stay and try a little longer," she said, "and I should help you, Esther?"

The Rev. William Barclay was sitting in a somewhat perturbed frame of mind with Aunt Persis at the supper table, when a visitor called.

"Blake!" he said, hurrying into the parlor. "I'm glad to see you. Sit down."

The young man did not return the minister's greeting.

"It's about my sister, Mr. Barclay," he said. "She's gone away,—I've had a letter from her,—gone to stay with her cousin in the city. She's often spoken of it, being tired of looking after me and the children; but I'd no idea she really meant it. And now—I'm sorry to bother you, sir, but I thought maybe you—or your wife—I don't see how we're to get along without her, Mr. Barclay!"

"Dear, dear, I'm sorry!" said the minister, whose sympathy was quickened by the feeling that he, too, had been abandoned to some lonely and untoward fate.

"I suppose it isn't strange," Robert blundered on in pathetic self-reproach, "that she

should have found it dull here. And I've been impatient often enough, I dare say. I could manage by myself; but there are the little ones. She's been like a mother to them. I —"

"Hush!" said the minister.

The front door had opened and steps were coming along the hall. Lucy stood in the doorway, with her hand on Esther's shoulder.

She had gone home with the girl, hoping to find Robert there, and to help her make her peace with him. But finding him out, they had come straight to the parsonage.

The low sun streamed in at the parlor windows. The roses dropped their petals on the polished table top. Upon the wall the turbaned Orientals bowed before their minarets and the boats floated along the winding rivers. Lucy looked at it all with the joy of one who sees again things familiar and dear.

The minister's face glowed. Robert's cleared like a sky swept suddenly of clouds.

"My dear," said the minister, "you didn't go, after all!"

"No," said Lucy, and her eyes were luminous with the light of deep content; "no, dear, we didn't go. I met Esther at the station, and we have come—home together."

END OF THE SERIES.

THE JOB OF THE SEA SOLDIER

By Henry Reuterdaahl 2

Mr. Henry Reuterdaahl is a student of naval affairs, and a widely-known naval artist. His work, with both pen and brush, is familiar to all readers of the magazines; and his paintings interpreting the life of our navy form part of the collections of the Naval Academy, the Naval War College and the National Museum. He served as a correspondent during the Spanish-American War, and again during the early part of the present war.

WHEN revolutionists run amuck in a dusky Caribbean republic, a few tricks of the radio bring the "leatherneck" mariner to the spot. Let some one else decide whether international law was made for the marines or the marines for international law. According to international law, landing an army in the territory of a friendly nation is an act of war, but maintaining order with naval forces is permissible as a policing job. The marines belong to the navy. They are the international police, and when they have done their job things have a way of becoming calm and uninteresting. In the words of the corps, "The marines have landed and have the situation well in hand."

But that has always been the way of the sea soldier:

The first to get agoin', the first that orders reach;
The first to load his rifle, the first to gain the beach.

With leadership as a heritage, the marine corps is a corps of distinction, garlanded with a century full of stories of bravery—of getting out of tight holes, of carrying "the white man's burden" in the far-away corners of the globe. Kipling calls the marine a "sort of a bloomin' cosmopolouse—soldier an' sailor, too."

Having a dash of jealousy, the army is lukewarm toward the marine corps, and says that on the parade ground the marines are "tolerably O. K." But the navy cheerfully and even enthusiastically admits that the "leathernecks" form our finest military body. Some think it might be a good scheme to turn the army over to the marines.

The corps has grown, and by law is to be thirty thousand men strong. Of course the soldier has his work, and so has the bluejacket; but put the lot ashore for a month, and the marine heads the column. When they gave medals of honor at Vera Cruz, the marines stood up and declared that they had done only the day's work and nothing worthy of medals, but willy-nilly they had to take them.

The marines know exactly how to handle themselves in a tropical fight. It is business from the moment their feet touch solid ground. They clean out a town by a house-to-house search, in the course of which they mix up in some pretty affairs in dark stairways, where rifles, gripped by the barrels, do effective work. In the simple language of the official report of the taking of Vera Cruz: "The marine forces advanced through the streets north of Avenida Independencia, where they met with heavy rifle and gun fire from houses, hotels, hospital, church steeples and military barracks. They advanced slowly, clearing houses and roofs of snipers and entering every house in every block as they advanced."

When the sea soldier is afloat in a modern battleship he does sentry duty, mans the torpedo-defense battery and holds his own with the bluejacket gun pointer, pulls an oar, or at the shriek of the siren tumbles out of his hammock for a fire or a collision drill. In coaling ship he does not shirk the shovel, and his "shave-tail" lieutenants do service at fire control or in the plotting room.

But in time the big fleet will probably be without the marines. Although the mission of the marine corps is bound up with that of the navy, many persons believe that the marine

will eventually be stationed ashore with his own advance base outfit, ready to mobilize instantly and go anywhere in his own transports. The great virtue of the marines is mobility, and they are ready for battle and on the way long before the army or the guard have even found their trains.

In the days of oak and hemp and the press gang, the "leatherneck" was the mortal enemy of the bluejacket. It was the marine who hit the tar over the head when the sailors mutinied, or who, in port, found the jovial Jack rolling along with one bottle inside and the other outside his belt, and led him to the cat-o'-nine-tails at the gangway. It

the lustre of the motto, *Semper fidelis* (Always faithful). The design of the officers' sword came from Egypt when, in 1805, the gallant Virginian, Lieut. Prestley O'Bannon, after marching six hundred miles through the desert of Tripoli, captured the stronghold of Derne and brought back the Mameluke sword of the faithful.

Indeed, the campaigns of the marine corps read like a primer in geography. Standing guard in Chapultepec and Vera Cruz, dodging the stinkpots of river pirates and fighting the Boxers in China, rushing the stockades of Malays and Guggus, keeping the Fiji Islanders in order, settling troubles in

searchlights, antiaircraft pieces and the wireless outfit.

The marines know how to handle a rifle; fifty per cent of the force are qualified, listed shots. There is a story from Vera Cruz that tells of good shooting and a sure eye. Our bluejackets were marching up the street from the Plaza between rows of low, two-story houses. A well-dressed Mexican gentleman, with a newspaper over his knee, was sitting on the balcony of his house, apparently intent on watching our sailors advance; but hidden under the paper he held a big revolver, and as our men went by he fired. The bullets were striking, but our officers could hardly suspect a well-dressed Mexican, reading a paper and looking peacefully on from his own house, of being the sniper.

Dropping his paper, the Mexican went inside to reload. When he came out again on the balcony, the glint of the gun caught the attention of Lieut. Col. Neville on horseback in the Plaza, one thousand or more yards away. Through his eight-power field glass the colonel saw plainly the flash of the shots under the newspaper.

"Get him," he said, turning to his orderly.

The man raised his rifle, pressed the trigger—and the Mexican fell out of his chair.

The bluejacket is so used to the smashing power of the twelve-inch gun that when he lands on the beach the rifle is to him more or less of a harmless toy, and a beltful of ammunition is likely to make him let drive recklessly; but to the marine the rifle is everything, and he has learned the discipline of the school of fire. In the unpleasantness at Vera Cruz, where the orders were not to fire unless attacked, not a wanton shot came from the marines. The officers kept their men back. With the Mexicans in plain sight of the outposts, a single loose shot from some thoughtless rifleman might have started serious trouble.

I shall not forget the tall water tower at La Garto,—north of Vera Cruz,—where I climbed up an iron ladder that lacked three rungs directly under the overhang of the top coping. My load of sketchbook and all increased the difficulty of

climbing, and had not a "leatherneck" grabbed me this article might not have been written. From the top of the tower you could see the camp of the Mexican regulars. Your glass followed the movements of the commanding officer in washing his undershirt, but there was no shot from us. The eminence that the Americans occupied commanded the railway track, and the wide-awake men, the wicked shape of the machine gun and its dangling ammunition belt, and the ever-searching field glass suggested to the "enemy" that the marines were capable of enforcing permanent peace. The Mexicans started no trouble; they did not even attack the mule-drawn flat car that ran between the outpost and the town.

The English captain of the Royal Marines, the "jollies" of His Majesty's Ship *Berwick*, came out on friendly inspection one day and lingered over Capt. Hill's command. Afterwards he wrote, "I was struck by the really astonishing cleanliness of the men, both on and off duty." Just as if those marines, drilled

MARINES BOARDING A BATTLESHIP ON THEIR WAY TO VERA CRUZ

has taken a full hundred years to lessen the breach between the tar and the marine. It has not quite closed yet, but they find it easier to live together. Each to his own job; the soldier can do what the sailor cannot, and vice versa.

The Continental Congress of 1775 mustered in the first American marines, and their two battalions antedate any fighting force of the United States.

The first American sea regiment had all the traditions and all the strict discipline of the British service. Flogging was the punishment of desertion, theft or drunkenness; the lashes were laid on "to the tap of the drum." Under such strict discipline there were only five court-martial cases among the officers during twelve years.

From their smashing of the Tripoli pirates to their present keeping the peace in Haiti and Santo Domingo, the marines have been in the thick of things. The globed insignia of the corps signifies foreign service, and the rays of the sun of all the seven seas have burnished

Cuba, cleaning house in Nicaragua and oiling troubled waters in black Haiti—those are some of the tasks that have kept the marines in trim.

Expeditionary work is the paramount reason for the existence of the marine corps. In less than an hour a thousand marines can be landed from the fleet, fully equipped, carrying their machine guns, their tentage, stores, medical supplies, signal outfit and ammunition. And in another hour they will be entrenched to hold the ground, and of course they always hold it.

Modern warfare demands an instantaneous push, and the specialty of the marines is advance base work. They must get there first, dig themselves in and hold the ground until reinforcements arrive. In making a base they must often, as at Culebra in the West Indies, carry five-inch guns through the surf and drag them uphill through the jungle and mount them; they must land the mobile artillery, dig intrenchments, lay submarine mines, devise a fire-control system, and install

within an inch of their lives, would not be clean! Watch them when they march by, and notice their stalwartness and spirit, their hard, lithe bodies, the rakish angles of their hats,

their common-sense equipment—in general, their soldierly look. Of course they are clean! Later you will hear of them in the trenches of France. Watch the extras!

THE PLATTSBURGERS

By Arthur Stanwood Pier

In Ten Chapters Chapter Nine

GRAY and Greiner went to the last target practice tied for the first place in B Company, with a score of 180 each. Stevens was close behind, with 178. Gray had slipped up on the fourth test,—rapid fire from three hundred yards,—and Greiner had done well at it, and was confident now of finishing ahead of his unlooked-for and heartily disliked rival.

The last practice was held on the afternoon of the last day in the Plattsburg camp. A brisk breeze was blowing across the range; the captain advised that each man take a point and a half windage. The test was at three hundred yards, rapid fire.

Ted's score, 33, gave him a total of 168. So he won the rank of marksman by a good margin and failed of that of sharpshooter by a somewhat larger margin.

Stevens turned in a score of 41, making his total 219—nine points more than were required for expert marksmanship. Greiner observed his score with hardly concealed satisfaction; if he made 40 points he should beat Stevens, and he felt certain of doing much better than that. Gray was the only fellow now that was dangerous.

Gray's nonchalance was formidable. After blackening and adjusting his sights and setting his wind gauge, he stretched out on his back, with his hat over his eyes and his rifle across his chest, and took no interest in anything—not even in Stevens's shooting; and Stevens had certainly been a dangerous rival. Greiner could not conceive of entertaining such slack indifference to a competitor's score.

When Greiner went forward to shoot, Gray never moved. Hoping to make a score that would establish his supremacy beyond question, Greiner was disappointed. His score of 43 points was good, but it was not extraordinary; and he came back from the firing line downcast and afraid that Gray would do better.

A newsboy passed in the rear of the company, calling out New York and Boston papers. That roused Gray as the shooting of his comrades had not done; he sat up with a start and fumbled in his pocket for change. The boy was some distance off; Gray got to his feet.

"I'll hold your rifle for you," volunteered Greiner, who was sitting close by and watching his movements.

Gray, surprised by the courtesy, felt he could do no less than respond; perhaps Greiner wanted to show he was ready to be decent.

"Oh, all right; thanks!" Gray passed the rifle over to him and walked away toward the newsboy.

Greiner saw that the sights and wind gauge were properly adjusted. He glanced round; Adams and Howland had gone to the firing line, Carton and Stevens were watching them; Bradford had his back turned and was talking to Ripley, who was glancing from him to the fellows on the firing line. Greiner slipped his hand along the rifle until he felt the screw of the wind gauge; then he stealthily turned it until the wind gauge, instead of being set a point and a half to the left, was set a point and a half to the right.

When he glanced up from doing this, he saw Ripley looking at him with a puzzled expression. Greiner flushed and turned away his face so that Ripley should not see the flush. He was sure that Ripley could not possibly have seen what he had done; he had screened his operations with an arm and a leg.

As a matter of fact, Ted had only noticed the intentness with which Greiner appeared to be examining Gray's rifle, and the puzzled expression had been caused by wonder at Greiner's unusual display of urbanity toward one for whom from the beginning he had shown unrestrained dislike; but Greiner's obvious embarrassment under his gaze arrested his attention.

Gray returned, sauntering, reading his newspaper as he walked. He received his rifle from Greiner and said, "Many thanks!" Sitting down, he leaned it against his shoulder and continued to read.

hands while he watched the shooting; but although his eyes were intent, he was really not paying any heed to the scores that Howland and Adams were making. Howland came back, dejected, condemned by his score, 23, to be classed as a "boloman," pure and simple.

Adams was more successful; he scored 32, and returned exuberant, for he had just squeezed into the marksman class, with an even 160 points.

Bradford and Gray rose to take their places on the firing line. Ted jumped up also. "Just

he commanded. "Attention! Inspection—arms! Port—arms! Dismissed!" Then, awkwardly and with a furtive glance at Ted, he moved over to Gray and said:

"That's a great score you made. You'll probably be top man in the regiment." Gray, responding to such an acknowledgment, proceeded to tell Greiner how luck had saved him from the consequences of his own stupidity—that he had set his wind gauge wrong and that just by chance Ripley had seen it in time.

"I guess I might do pretty well as a soldier if I could only have a nurse," Gray concluded. Ted found relief in the laughter that followed. Greiner stood, unsmiling, with eyes cast down.

When the company had marched back to the camp and had been dismissed, most of the fellows hastened down to the lake to have a last swim. Ted heard Greiner say to Carton that he was going to take a shower instead; and when Ted came up from his bath he found Greiner alone in the tent, sitting on his cot, stripped to his undershirt and busy over a pile of clothing. Then Ted saw what he was doing; he was ripping the chevrons from the sleeves of his shirts, blouse and sweater.

of the bulletin board that evening and saw Gray's name heading the final list with a score of 230. And after that in red ink were the words, "Top score of the regiment."

"Good boy!" cried Ted, clapping his friend on the back; others in the throng turned to congratulate Gray, and presently a crowd was escorting the champion to the post exchange, to fill him up with ice-cream cones and sarsaparilla by way of celebrating his achievement.

After breakfast the next morning there was the exciting stir of breaking camp. In all the company streets the boys were making up their packs and laying out the blankets for the squad rolls. Of the three blankets assigned to each man he was to carry only one on his back; the two others and his sweater he contributed to the squad roll, to be transported by wagon to the next camping place. Also there was a squad bag, to go with the squad roll, in which each man was permitted to put a towel, an extra pair of shoes, a shirt and a change of underclothes.

Soon squad rolls and squad bags were piled at the head of the street; the company call sounded, and then came the order, "Fall in!" When the boys were lined up, wearing their

packs and with rifles in hand, Capt. Hughes passed down the front rank, Lieut. Wharton down the rear rank, and felt each man's cartridge belt to make sure that he had not stowed away any loaded shells through accident or oversight. When the inspection had been completed, blank ammunition was issued, and each man received three clips of cartridges.

Capt. Hughes outlined in a few words the hypothetical military situation. There had been an invasion from Canada. The regiment was the advance guard of the force that was being gathered to repel the invaders. The first battalion was to form the support of the advance guard, the second battalion the reserve, and Company B was to be in the van of the support. Enemy patrols had been reported ten miles north of Plattsburg, tearing up the railway tracks. The advance guard was to conduct a reconnaissance in force. It was understood that the regular enlisted troops of the Plattsburg post constituted the "invaders."

The boys swung away down the smooth road with a sense of adventure in their hearts. The sun was not yet high and hot, the packs were not yet heavy on their shoulders, and they all—or nearly all—were in a blithe and lively mood. Only in the next to the last rank Greiner trudged without looking to right or left and without joining in the talk or the laughter or the songs.

They marched through the streets of Plattsburg before the shops were open, but from the doorways of many houses people smiled and waved at them. Ted thought how differently those people would look and act if there were really an invading force ten miles away.

Outside the town the column turned from the macadam highway into a country road; the dust enveloped the marchers, and the climbing sun started the perspiration on their faces. They were glad when a halt was at last called and they were allowed to take off their packs and sit down on the grassy bank by the roadside. During the rest Capt. Hughes gave them a little talk, in which he described to them the topography of the country and explained just what the object of that morning's march was.

While the company were resting, there sounded a great clatter of automobile trucks and a clanging of horns, and soon there swept by a procession of heavily loaded cars, bearing camp supplies. After them came several armored cars, carrying machine guns.

Meade, who had been talking with Greiner, found an opportunity to slip over and sit down beside Ted before the start was ordered. He said to him in a low voice:

"Greiner seems down on his luck. Do you know why he resigned as corporal?"

"Perhaps he thought he wasn't very popular with the squad," Ted suggested.

"I suppose that's it. I guess the bawling out he's had from all the companies at night made him sensitive, too. He seemed to get in wrong at the start."

Ted made no comment; there really did not seem to be anything for him to say. He was interested in the fact that the usually gay and cheerful Meade seemed to feel quite keenly his friend Greiner's dejection; but when the company was again on the march, Meade started a song, and after a while Greiner joined with the others in the chorus.

There was nothing very exciting in that day's march. Squad 16 was detailed as a patrol to follow along a ridge some distance from the road, with instructions to bring an immediate report in case the enemy should come into view; but after much scrambling over wire fences and stone walls and careful

WHEN HE GLANCED UP, HE SAW RIPLEY LOOKING AT HIM WITH A PUZZLED EXPRESSION

DRAWINGS BY NORMAN ROCKWELL

a moment, Gray!" he called. "Your rifle—haven't you got the wind gauge screwed round to the right instead of to the left?"

"By thunder!" said Gray, examining the piece. "That's what I have."

He corrected the adjustment and then sprawled out at the firing line.

Ted looked at Greiner, but encountered no glance in response. Greiner was looking at the ground and plucking at the grass.

Poor Bradford was more hit-or-miss than ever. He got two bull's-eyes and two threes, and the rest were misses.

"Thank goodness, that ends target practice for me!" he said to Ted, as he returned. "I certainly hate a gun."

Gray began to shoot. All the other members of the squad waited and watched with interest—all except Greiner, who, after shortening the sling of his rifle, got up and walked away. Ted followed him with his eyes, wondering what he might do; but he did not go far; he stood talking to Lieut. Wharton a few paces behind the line, and Ted turned his attention again to Gray's work.

The men of the squads near by were watching it, too, and waiting with interest to see the results displayed. At last Gray fired his last shot; the target remained in sight for a few moments longer and then disappeared; then, after a brief interval, it rose again. The marker began to point—one bull's-eye, two bull's-eyes, three bull's-eyes, four bull's-eyes; the fellows of the neighboring squads grew more excited, and some of them began to count aloud: "Five—six—seven—eight—" "Top score, sure!" murmured Bradford ecstatically. "Nine—ten."

Ten bull's-eyes! There was an outburst of applause, and Gray's comrades crowded round him to shake his hand. Bradford was the most exuberant of all. "Good boy, Charley, good boy! The old corp couldn't bear to stay and see it; he's off there talking with the lieutenant; he'll be sore as a crab!"

Gray smiled. "I certainly had pretty good luck. If it hadn't been for that keen eye of yours, Ripley, catching that fool mistake I'd made with the wind gauge, I'd have had nothing but twos and threes instead of bull's-eyes. How did you happen to notice it, anyway?"

"Oh, I don't know," Ted answered. "Just chance."

Apparently Gray had not the slightest suspicion that the wind gauge had been tampered with, and Ted decided not to communicate his own suspicion. He watched Greiner and Lieut. Wharton with interest, however; they seemed engaged in serious conversation.

Presently Greiner returned to the squad. He did not look at Ted and he did not speak to Gray or to anyone else. "Squad inspection!"

"I've resigned as corporal," Greiner said, without looking up. "I suppose you know why."

"Yes," Ted answered. "I suppose I do."

"It rests with you whether anyone else knows or not."

"There's no reason that I can see for telling."

"Thanks! If you did, I should have to get out. I couldn't stay with everyone knowing. It will be bad enough, with you knowing."

"I shan't speak of it."

Greiner said nothing more, but went on busily ripping the insignia from his sleeves. Ted left the tent, in order not to embarrass him by his presence.

The company formed as usual for retreat and stood at parade rest during the playing of The Star-Spangled Banner. Then Lieut. Wharton came down the line and stopped in front of Squad 16.

"Mr. Stevens," he said.

Stevens stepped forward and saluted.

"Take number four in the front rank. Mr. Greiner, go to number two. Mr. Gray, take number one in the front rank; reward of merit for your score this afternoon. Number one, drop back to number two in the rear rank; number two in the rear rank, move along and take Mr. Gray's place at number four."

The squad was completely bewildered by all this shuffling, but the lieutenant vouchsafed no explanation and walked back up the line.

"Company—attention!" shouted Capt. Hughes. "Squads left!"

They marched away to the last drill of the camp, with Squad 16 heading the procession and Stevens and Gray on either end of the front rank, feeling strange and conspicuous.

After the drill was over and while the members of the squad were stowing away their equipment, there was much questioning.

"Are they going to change all the corporals for the hike?" asked Carton.

"No," Greiner answered. "I resigned."

His manner did not invite inquiries, but Carton said, "What did you do that for?" "I thought some one else had better take the job," Greiner replied.

Afterwards Gray found an opportunity to express his amazement to Ted.

"That gets me, Greiner doing the self-sacrificing act," he said. "Well, I must have misjudged the boy all along. Stevens will make a fine corporal. It's a shame, though, the lieutenant should have chosen to decorate me at your expense."

"Oh, I don't mind!" Ted answered, although, to tell the truth, he had been feeling a little sore over it. He forgot his soreness, however, when he stood with Gray in front

spying of the horizon the squad rejoined the command, having seen no hostile troops.

The fellows were all dusty and hot, hungry and weary, when, at half past one, they came in sight of an upland meadow on which tents were pitched and horses and mules were picketed. By those signs they knew it to be the camping ground for the night; and presently Capt. Hughes led the company into the field and up to the top of the hill. There the first and second platoons lined up opposite the third and fourth platoons, and then on each side of the lane between the two divisions the front-rank men and the rear-rank men "took interval," as it is called—stretched out their lines so that there was a space of four feet between every two men. The front-rank men then drew their bayonets and thrust them into the ground, thus marking the position for the front pole of their tent. At the order, "Pitch tents!" off came the packs and down went the rifles, and everyone set busily to work.

Ted had looked forward to this moment with some apprehension. In the new adjustment of the squad he was rear-rank man to Greiner, and that meant that during the hike Greiner was to be his tent mate.

They set up the tent with hardly a word, and then Greiner went off to the brook at the bottom of the field. Ted lingered to stow his belongings neatly in his half of the tent; then he followed Greiner, wondering if their relations were always to be so uncordial.

He chose a place some distance downstream from his tent mate, for he did not wish to embarrass Greiner with his presence if he wished to be alone. After washing his face and hands he went back up the hill, and reached the bottom of the company street just as a great and welcome commotion arose at the top of it. The company cook beat upon a tin pan and shouted in a stentorian voice, "B Company, come and get it, come and get it!"

Ted dived into the tent, snatched up his mess kit and hastened to get into line. When he had been supplied he sat down on the ground and diligently began to dispose of the heterogeneous heap that filled his plate. Just as he was finishing, the company cook beat on the tin pan again and shouted, "Seconds, B Company! Come and get your seconds!" So Ted, still hungry, lost no time in going forward for his "seconds."

"HELLO! HELLO! SEND THE BOYS QUICK! THE MEX—"

After he had completely satisfied his appetite, he scraped his dishes over the pit that had been dug for refuse, sloshed them for a few moments in a tub of hot water against the dishes of five or six others, and then wiped them on a clean wash rag, which looked surprisingly dirty after it had performed this service. On returning to the tent he found Greiner spreading straw in it—covering Ted's bit of ground as well as his own.

"Much obliged," Ted said. "Where did you get it?"

"At the barn across the road. The farmer gave me a ponchoful for a quarter."

"Not such a bad trade for him, at that. I'll lay in the stock at the next camp."

They had a restful afternoon. Ted cleaned his rifle and visited his friends; he found Mark Perrin, who lamented the frightful hardships of such a march, and expressed the most pathetic longings for his little bed at home—to the derisive comments of the three or four who heard him.

"He just loves being a soldier," one of them remarked to Ted. "In fact, he thinks of staying over for the next camp."

"Not if they made me a major general," declared Mark.

When Ted returned to B Street, he found Greiner lying in the tent, studying the field-service regulations. It was something new to see Greiner studying a textbook; when he had been corporal he had never deigned, so far as Ted was aware, to open the pages of one. Ted wrote a letter and took a bath in the brook; and then he had to run in order to fall in for retreat. Then supper, and after supper a lecture to the whole regiment on the military situation of the day.

By the time the lecture was ended it was dusk; bonfires had been lighted at the head of every company street and burned brighter and brighter in the fast-gathering darkness. Ted sat with the crowd round the B Company bonfire and heard Capt. Hughes tell stories of his experiences in the Philippines. Later, at the captain's suggestion, the singers of the

company got together and warbled one song after another until it was time to turn in.

Greiner was already wrapped in his blankets and, so far as Ted could judge, asleep. Ted took off his leggings and boots and crawled into his own sleeping bag as quickly as possible. A soft wind ruffled his hair and blew cool upon his face, and he had a sense of delicious

THE RAID ON STATION K

By Denison Clift

ON the desk before Anton Mantor, the general manager of the Lost Hills oil fields, lay a slip of paper, which said that John T. McKittrick had been appointed superintendent of the new tract below Hopi. The manager signed his name on the slip.

"Young McKittrick is a man I take real pleasure in helping ahead," he said to his friend from the East. "He's got plenty of courage, and, better yet, he's loyal and he has brains. His brains got him out of a dangerous situation not so long ago."

"Before the San Joaquin Valley trunk line, the longest 'common carrier' in California, was laid, we used the old barrel-and-barge method to transport the crude oil down the Kern River from the fields to the refineries. It was always a slow, expensive way."

"The company hired several hundred Mexicans to handle the barrels on the river barges. Their spokesman was a giant half-breed named Cruz Caicebo. His positive, barbarous qualities made him their natural leader, and I always dealt with the Mexicans through Caicebo. Until we started to lay the pipe line we had no serious trouble—but then we had trouble aplenty."

"The company's engineers had surveyed for a pipe line two hundred and eighty miles long, to carry the oil from the Joaquin and Kern fields to the San Pablo tank farm on San Francisco Bay. When the Mexicans saw the 'stringing' gangs unload the twelve-inch black pipe on the floor of the valley, from Hopi to Wyndote, and saw the 'tong' gangs follow rapidly and lay the pipe, they realized that the demand for their services was vanishing. They became restless; they threatened me openly and in secret; finally, in blind rage, they began to desert and to consort in drunken groups. That meant danger."

"Early in July we stopped using the river barges and, after due notice, discharged the Mexicans. Under Caicebo's command they went quietly down the river and camped near Daily's Island. Their very quietness was ominous, and, sure enough, two days later they began a succession of terrifying raids."

"The system that supplanted the barges had pump stations at intervals of from twenty to thirty miles. At each station there was apparatus for heating the low-gravity oil, in order to thin it out so that it could be more easily pumped over the grades."

"We sent Johnny McKittrick out as pumper at Station K. When he started for the mountains he loaded one of his mules with magazines and with an old phonograph that had delighted the boys at the camp. Johnny counted on the phonograph to banish his loneliness."

"When the Mexicans began their murderous raids, I telephoned a warning to McKittrick."

"If you need help, sing out!" I told him.

"He laughed. 'If they come, I'll play 'em a tune on my phonograph.'"

"But that very night McKittrick's telephone bell tinkled, and when he answered he heard the frantic voice of Job Anderson, the pumper at Belridge, thirty-two miles over the ridge, crying, 'Mac! Mac! The Mex are burning the station and—' Job's voice suddenly stopped."

"Johnny relayed the message to me. When we reached Belridge two hours later we found that the former rivermen had torn up whole sections of pipe, spread a fortune in oil across the desert sands, and burned the station to the ground. We found poor Anderson in a ravine, gagged and badly beaten. After that, we offered a reward for the capture of Caicebo, armed all the men at the pump stations and placed a patrol along the pipe line."

"Station K was set down in a lonely region eighteen miles west of Arroyo Grande, a mushroom oil town. Yellow sand was everywhere; the monotonous, dreary landscape was broken only by clumps of mesquite and chaparral and by a hillock of umbrella trees and cottonwoods that grew a dozen rods north of the station."

"The station consisted of a dazzlingly white

weariness and health and comfort. For the last he was indebted, as he knew, to the bed of straw under his blankets—in short, to Greiner; it suddenly occurred to him that this had been Greiner's peace offering and pledge for the future. He felt more sorry then for Greiner and more kindly toward him; the sound of his regular breathing scarcely more

tower, in which was a bunk room and, above it, a lookout, and of a squat, rambling engine house, where the *chug! chug! chug!* of the gas engine sounded day and night. Ten rods from the station directly south, there was a trestle

that spanned a ravine. That trestle supported thirty feet of the unprotected pipe line."

"After the Belridge attack, McKittrick scanned the landscape during the day from the little hillock—'Fort McKittrick,' he called it, for it afforded an admirable defense; at night he slept in the bunk room with his loaded revolver at his side. If he woke restless, he would play a lively air on the phonograph."

"One night he woke with every sense athrill. Above the *chug-chugging* of the engine he heard a sound of hammering from the direction of the trestle. Leaping to his feet and pulling on his boots, he peered through the doorway. The moon had set. It was long after midnight—about three o'clock, he thought. Against the deep blue-black sky he saw the skeleton of the trestle. He could hear men's voices."

"Five minutes of silence, then *bang! bang! bang!* Some one with a sledge was battering the oil pipe! Johnny knew what that meant, and his first thought was how he could distract the rivermen before they broke the pipe, and yet give himself time to telephone."

"Closing the door, he drew the muslin curtain over the window. As he turned away he stumbled against the phonograph in the darkness, and that gave him an idea. He wound up the machine, then started it going. On the desert night the rasping sounds of the record suddenly broke forth. The theme was plantation days, and the words,

"The old lark am a-moverin', a-moverin', Oh, the old lark am a-moverin' along."

were followed by plenty of plantation appreciation—shouts, yells, handclapping and shrill whistles."

"His trick worked like a charm, for the hammering ceased instantly. To further the illusion that there was a small crowd in the room, Johnny lighted the kerosene lamp and placed it on the table near the curtained window. Then he telephoned to me here. I heard his voice, low and tense:

"Hello! Hello! Send the boys quick! The Mex—' That was all."

"Johnny! Johnny!" I cried; but no response came, and I knew that the raiders had cut the wires."

"Johnny decided to slip out of the tower and dash for the engine room to shut down the engine, so that if the raiders should succeed in breaking the pipe the oil would cease to flow."

"But before he could move, a volley of rifle shots rang out. The lamp chimney on the table was shattered to bits. Johnny heard the *zap! zap! zap!* of soft-nosed bullets splashing into the walls. At that moment the phonograph ran down and a terrifying silence and darkness followed."

"Thus caught in his cabin, Johnny climbed a ladder in the corner, opened the trapdoor in

HE WAS BRAVELY HOLDING HIS OWN

a pile of old magazines; four feet above the floor was a small square window."

"Peering out, Johnny saw four or five dim figures stealing toward the tower. Only one thing would halt them, and Johnny whipped out his revolver and emptied the chambers

than a foot away somehow increased the kindness of Ted's feeling. He thought now of Greiner as of a comrade who had tried since his fault to do the best he could, and who was sleeping now peacefully like a child."

And soon, pondering all these things, Ted himself was sleeping just as peacefully as that.

TO BE CONTINUED.

DRAWINGS BY ROBERT AMICK

at the marauders. Curses and yells answered the leaping jets of flame, and the Mexicans scampered back to the ravine like frightened rats."

"Turning, he drew the ladder up after him and closed the trapdoor. He had hardly done so when he felt a terrific jar against the tower. The door below burst open and at least half a dozen men flung themselves into the bunk room. The band had evidently divided, and while Johnny was repulsing one half the other half had made a detour and rushed the tower from the north side."

"They were a surprised lot to find the tower empty, and showed their disappointment by shouting madly. With thumping heart Johnny heard them crashing round in the darkness below. One struck a light, and through a knot hole in the floor Johnny caught glimpses of their evil, swarthy faces. One was Cruz Caicebo—Caicebo, the outlaw, on whose head was a reward of five hundred dollars."

"Caicebo pointed to the trap and commanded one of his followers to jump on the table and to smash the door open with a chair. Drink-crazed, they risked death brazenly."

"Johnny planted himself square in the centre of the trapdoor. The chair banged upward, but the door scarcely budged."

"Guessing that some one was there, Caicebo jerked out his revolver and fired up through the door. The bullet whined through the thin board and ripped into Johnny's arm; stifling a cry of pain, he sank down upon the trap."

"There was a wild shout below, and Johnny, knowing well what was coming, rolled himself over into a corner of the room. From that point of refuge he watched a volley of bullets splinter the trapdoor."

"Two can play at this game," he said to himself, and returned the volley through a crack in the floor."

"With savage yells the men fled from the room; but apparently one of them stayed behind, wounded, for Johnny heard some one thrashing about."

"Then suddenly, from the direction of the ravine, appeared a lurid glare, and flames shot skyward with a hiss. The first group of Mexicans had cut the pipe and set a torch to the flood of oil. The gas engine was feeding thousands of barrels of oil into the flaming sump!"

"To shut down the engine was now Johnny's single aim, even though it should cost him his life. Cautiously lifting the trapdoor, he reconnoitred for a moment, and then leaped to the floor. By good fortune the wounded outlaw was directly beneath him; Johnny's feet struck him and knocked him flat. Before the bandit could rise or fire, Johnny was through the doorway and had banged the door shut and locked it. With half a dozen swift leaps he was in the engine house; his hands jerked the lever of the engine, and the pistons halted in their whirling flight. A few moments later the flood of oil ceased pouring into the sump."

"Johnny knew that he had won, but his life was still in danger. Turning, he dashed for 'Fort McKittrick,' brilliantly lighted by the lashing oil flames. Several rifle shots rang out, but a moment later Johnny threw himself, safe, among the boulders."

"From there with his revolver he was able to check the attempts the Mexicans made to rescue their imprisoned comrade; but although he was bravely holding his own, he was mighty glad when, about dawn, five line guards, two *mozo* boys and I came riding down at a mad pace."

"We were overjoyed to find him alive. The raiders had scattered across the desert, but when I looked into the tower I discovered that the imprisoned bandit was Caicebo. His capture thrilled us. We bound him to a cayuse and turned him over to the authorities at Arroyo Grande. That was the last of the raids."

"And now," concluded Mantor, "you know why I think Johnny McKittrick deserves to get ahead, and I guess you agree with me."

FACT AND COMMENT

USUALLY it is the worker that is too soft rather than the work that is too hard.

Small Skill is gained by those who cling to Ease;
The Able Sailor hails from Stormy Seas.

NO dwelling is a home that does not hold food and fire for the mind as well as for the body.

"WHY shouldn't a farmer raise fish as well as chickens?" asks Secretary Redfield, who earnestly advocates fish culture to increase the food supply. Doubtless most of the farmers could answer the question convincingly so far as concerns their own cases; nevertheless, there is something in it for those who live near ponds or streams.

HOLLAND has just celebrated very quietly the 250th anniversary of the day on which Dutch Guiana came into its possession. A quarter of a thousand years is a long time for a country to retain a colony, although England and France have islands that have been under their flags for a longer period. Do you know which they are?

OF Joseph H. Choate, the great lawyer widely known as "the first citizen of New York," anecdotes will continue to be told through years to come; but it is doubtful whether any of them will live longer than his witty and graceful tribute to his wife. "If you could not be yourself, who should you prefer to be?" some one asked him. Instantly came the reply, "Mrs. Choate's second husband!"

WHEN we printed our article on how to conduct a flag raising we described the form of salute for military men and the form for civilians, but we mentioned none for women, because there is none. A woman who has called attention to the lack makes the sensible suggestion that women adopt the military form of salute. It is both dignified and graceful, and does not require that the hat be removed.

THIS conversation was overheard on a street car the other day: "Well, what are you doing for your country? Gone into the Home Guard?" "No; they wouldn't take me on account of my eyes." "Planting a garden?" "No; haven't any land that's fit to plant. I'm going to pay my war tax without kicking. The Association wanted me to go in with them on a protest, but I refused." Is not that a pretty good kind of patriotism, too?

WE know that our readers will rejoice with us in the amended Massachusetts law that allows The Companion, without becoming a lawbreaker, to have pictures of the American flag on its pages once more. For several years the Massachusetts law that aims to prevent disrespect to the flag has been so sweeping and stringent that it has been illegal for publishers of newspapers, magazines or books to print a picture of the flag under any conditions whatever. Most publishers, to be sure, have ignored the law and have suffered no penalty, but The Companion has preferred to wait until the law was amended as reason and patriotism dictated.

PROBABLY the great majority of German-Americans in this country are loyal to the land of their adoption, but most of them are silent. It is only when one of them speaks out frankly that we get a glimpse of the tragedy in their souls. Here, for example, is a part of a letter in the Chicago Tribune: "Because of my birth, and feelings beyond my control, I have no particular love for the French and less for the English; but by a strange irony of fate I see those nations giving their blood for principles I hold dear, against the wrong principles of people I individually love. I do not want to see the Allies triumph over the land of my birth, but I do very much wish to see the triumph of the ideas they fight for.

It sickens my soul to think of this nation's going forth to help to destroy people many of whom are bound to me by ties of blood and friendship, but so it must be. It is like a dreadful surgical operation."

INDEMNITIES

WHEN Germany entered the war it counted upon winning a quick victory and then imposing a money indemnity that would cover what the war had cost it. Both parts of the programme have failed. Nevertheless, Germany has never breathed a doubt of its winning eventually, or abandoned its intention to make its enemies repay a large part of its expenses. The active discussion of the subject in the German press may be premature, but in view of German confidence in the future it is not unaccountable.

The Entente Allies have never expressed any intention of demanding an indemnity for themselves; they are willing to pay the cost of relieving the world of the Prussian menace. But they have declared that if they win they shall require Germany and its allies to rebuild and restore what they have destroyed in Belgium, France, Serbia and Roumania.

Either outcome means an almost ruinous drain upon the resources of nations already on the verge of bankruptcy; but since the demand for an indemnity implies the power to enforce it, the demand must be met, however great the hardship it imposes. The question then arises, Could the Entente Allies, or could Germany, respond to such a demand?

Undoubtedly Germany would not require the whole of the indemnity in money. From France it would accept a slice of territory, from Russia its Polish possessions; but from Great Britain, although it would demand a few of its colonies and a fleet of its ships of war, it would try to extort a huge sum in cash. If the German Emperor could enforce such terms upon his enemies in Europe, this country would get off easily if it had only to discard the Monroe Doctrine and to permit the Kaiser to appropriate whatever might take his fancy in the Caribbean Sea and in South America. Such a programme would not eliminate a money indemnity from Great Britain; possibly not from the United States.

On the other hand, and in the event of victory's resting elsewhere, could Germany furnish the means to restore Belgium and the other devastated lands? There can be no doubt of it. The solution of the difficulty lies in the fact that the demand is, not for credit, but for gold. There is plenty of gold on both sides of the fighting line, and, although a great deal of it has been transferred to this country, it has continued to circulate in all the Allied countries. In Germany it has been bottled up, driven from circulation by paper money and concentrated in banks. If, now, we bear in mind that the debts of the warring nations appear as the capital of their creditors, we shall see that the governments, bankrupt though they may be, still have ample wealth to draw upon, still retain the power to raise funds and to convert those funds into the required gold.

It is not yet decided which group of powers will be able to bleed gold from its enemies; but into the hands that hold the lance gold to the required amount will surely flow.

CHEERFULNESS

THERE are times when cheerfulness ceases to be a virtue, times when it is necessary to show to some persons a black face and a stern reproof. But the cheerful person will less often have to display those forbidding aspects than he who is moody or who is heavily aware of the weight of the world and his responsibilities in it. People work better for cheerful persons than for surly or "cranky" persons, are less likely to commit errors or faults deserving of censure and more likely to develop the pleasant and also the solid traits of character.

Persons in authority frequently feel it necessary to disguise their naturally cheerful dispositions. They have the idea that if a man is to be a strict disciplinarian he cannot exhibit a smiling countenance or freely indulge his natural turn for humor. Yet the strict disciplinarian who shows in his relaxed moments a kindly heart and a genial spirit will accomplish better results than one who relies upon his sharp voice, brusque manner and cold eye to command respect. And some persons, without being strict disciplinarians at all, are able by communicating their spirit of cheerful interest and activity to get a large measure of efficiency out of their workers.

If cheerfulness is a valuable trait in an

employer, it is even more important in an employee. The man who can conquer depression and worry and discontent, who can control the forces of envy and jealousy within him, and who can go about his work day in and day out with cheerful good humor is in a fair way of arriving at a stage where depression, worry, discontent, envy and jealousy may reasonably be expected to have less claim upon him. At whatever end of the industrial scale your lot may be cast, you will be wise if you cultivate the spirit of cheerfulness in your relations with your fellow men.

TO SAVE, OR NOT TO SAVE

AMERICAN women who honestly desire to be a help rather than a hindrance to their country, and who stand ready to practice a wise economy if it will avail to preserve supplies, are a little bewildered by the clamorous but contradictory counsels that are offered them. On the one hand, extravagance is condemned as wasting resources; on the other hand, retrenchment is condemned as injuring trade conditions. No sooner has a domestic economist pointed out that indulgence in any one luxury can be, and should be, curtailed than the purveyors of that luxury rush to the fore, protesting that the welfare of a number of working people depends on its lavish consumption. "A recession in the volume of business will involve far-reaching calamities."

But where is the economy that does not involve some recession in the volume of business? Retrenchment is seldom a matter of choice, and never a matter of enjoyment. It is either a necessity to which we reluctantly bow, or a moral obligation that we recognize, but do not pretend to relish. It is also at times a criterion of taste. Money has been very plentiful in the United States for the past two years. Some of it has been generously given. Much of it has been lavishly spent. Wherever the spending has been excessive, as in our large cities, the spectacle has been an offensive one, because we knew that in distant parts of the world human beings were dying of want. The children of Belgium, we are authoritatively told, have not for two years eaten "according to their hunger." The children of Poland were more fortunate. They starved outright, and their little bodies have long since crumbled into dust. But the United States bought more candy last year than in any twelve months of its history. Food has been wasted as never before, and we are now facing the possibility of a world shortage. If we refuse to deny ourselves for the sake of suffering humanity, we had better begin to understand that the success of our own arms and our own future safety depend upon preserving and dispensing our resources.

There has been a disposition to mock at the women of wealth who bound themselves not to serve more than three courses at their own tables, or to eat more than three courses when they dined away from home. To the great bulk of Americans, three courses fail to represent even moderate privation.

If nature can subsist on three,
Thank heaven for three. Amen!

Yet any reduction of luxury, any denial of self-indulgence, is a step in the right direction—of practical value and of tonic quality. The habit of prodigality is not confined to one class of citizens in the United States; it is shared by all. It is not confined to food; it plays havoc with every commodity. We waste enough wood and coal every year to keep all Italy warm. The thin silk stockings on a working girl's feet and the ropes of pearls round the neck of a munition maker's wife are signs of the same lack of sanity and of taste. It is the women of the country who have been urged to spend with discretion, and to save with austerity. There is no use asking men to economize; they would if they could, but they literally do not know how. For centuries it has been their part to earn money, and the part of their wives to balance income and outlay. Now it is the part of all women to spend less, to save more, to waste nothing, to anticipate the enforced retrenchment of another year. So, and so only, shall ruin be averted, and the nation be free to play a liberator's rôle.

THE NEW ARMY

THE present war is something vaster and more terrible than any war that has gone before. It cannot be waged by a small and highly trained professional army; it cannot be fought by volunteer forces hastily recruited and hurried into battle. The number of soldiers required is so vast, the equipment needed is so enormous in amount, the

on the economic and financial resources of the belligerent peoples is so tremendous, that nothing less than the prompt, complete and intelligent organization of the entire nation for the purposes of war will serve. Everyone who has watched the progress of the great struggle in Europe understands that fact; that is why Congress found it so easy to overturn the precedents and traditions of our entire military history, and to decree that the army be raised by selective draft and not by the volunteer system.

But in a higher sense the army that is about to be chosen from among the young men of the country is truly a volunteer army; we must not do its members the injustice to suppose that they do not serve gladly. They are a part of a nation that has enrolled and volunteered in mass, every man ready to do the duty that the country requires of him. The government has simply undertaken to select from those millions of volunteers the men best fitted to march with the colors. At a time when unremitting energy is needed in our machine shops, our ammunition factories, our shipyards, our farms and our gardens, if the world is to be fed and the battle for democracy won, each man must be assigned to the task that fits him best. It is the weakness of the old-fashioned volunteer system that it does not take that important fact into account, and permits the misguided patriotism of its sons to fill the ranks with men who could be of more service behind the line, and to leave behind at home men who would be more useful at the front than anywhere else.

The men who are finally selected to wear the khaki may well be proud that the nation has chosen them to bear its flag and its cause into the smoke of battle. Those who are to remain at home can do so with a tranquil mind and a clear conscience, sure that their own part, if less hazardous and therefore less glorious than that of the others, is no whit less essential to the final triumph of democracy in the world.

CANNING AND DRYING

THE question of plenty or want next winter depends not only upon what crops are raised this summer but upon how well they are cared for; and many families will answer it by their skill in saving the surplus of garden and orchard. In August and September they often produce so much more than the table requires that some tomatoes, sweet corn and fruit go to waste. The study of modern methods of preserving such a surplus is worth while in every family this year; and especial attention should be given to inexpensive canning that requires little, if any, sugar. Tomatoes, for example, as most housewives know, can be preserved by boiling, skimming, salting and inclosing them in air-tight jars; that wholesome vegetable ought to be laid by in large quantities when its season is at its height, but care should be taken to see that only firm, sound fruit is used. So eager are the canning clubs this year, however, and so scant may be the supply of jars and cans, that all necessary utensils should be provided early in the season and all wide-necked bottles and glasses carefully saved.

We ought also to revive the household industry of drying fruits and vegetables. Our grandparents took care that winter should not catch them without a goodly stock of dried apples, peaches and green corn. In following their example we have conveniences that they lacked. Their peaches and corn had to be exposed to the sun and too often to the flies and the cat—an excellent vegetarian where green sweet corn is concerned. We know that such drying fruits ought to be carefully shielded by mosquito netting when spread in the sun, and that when the sun refuses to shine the drying can go on in the hot closet or the kitchen range. Although of course only sound fruit should be used for drying, it is quite possible to save imperfectly shaped fruit that could hardly be marketed and that might easily be wasted.

Dried corn, cut green from the cob, is less common than dried apples and peaches, but it is easily cured, and in midwinter seems sometimes sweeter than the green corn of August. An old New England dinner was salt shad with succotash made from dried sweet corn and large beans. Salt shad is no longer to be had for love or money; but if any family that is staying by the seashore where fish are plentiful cares to salt its catch, even of rather coarse fish, and at the same time to dry its surplus corn, it can be assured next winter of a combination as appetizing as it is frugal.

The harvest of eggs in these days knows no surplus, so great is the demand. Yet, in view

of the certain scarcity and possible famine of eggs next winter, it will prove true economy to have a good store "put down." Thirty dozen can be safely kept in a stone jar if they are covered with a solution of three pints of commercial water glass (the silicate of soda) in eighteen quarts of boiled water. The eggs must be strictly fresh; and it is desirable not only that they be infertile but that they be "put down" as early in the season as possible.

Such are a few of the household economies that our forefathers practiced. Their revival with the aid of modern scientific methods will help not only to meet the present crisis but also to give to such as practice them a new sense of security and independence.

CURRENT EVENTS

CONGRESS.—The war revenue bill was in the hands of the Finance Committee of the Senate, which was rewriting its provisions radically. In the new bill the retroactive income tax, the horizontal increase in tariff duties and the zone postal system for second-class mail are all abandoned, and many of the special taxes on business are modified. —The conferees on the espionage bill agreed on a section providing for newspaper censorship; the section will be opposed in both houses. —The House put an appropriation of \$750,000,000 for the building or purchase of cargo ships into the urgent deficiency bill and passed it on May 28. —The Senate instructed its Naval Affairs Committee to investigate the death of two nurses on the steamship *Mongolia*, caused by the firing of a defective shell, and to report on the charge that defective shells had been supplied to other armed merchant vessels. The naval investigating board has reported that the accident on the *Mongolia* was not caused by an old or deteriorated shell. —The House passed the bill authorizing the government to make a survey of the food supply of the country.

PREPARATIONS FOR WAR.—A speech by Gen. Goethals in New York in which he declared that iron cargo ships must be built by the United States Shipping Board, and that a great wooden fleet was impractical, led to the discovery that his views differed in some respects from those of the Shipping Board. Mr. Denman, chairman of the board, declared that the building of wooden ships would go forward, because iron ships could not be built fast enough, but that iron ships would be built, too, as fast as the yards could turn them out. —The Department of Justice announced that nine arrests had been made in Texas and two in Virginia, in connection with plots to offer armed resistance to the new conscription law.

BRAZIL.—The Brazilian Chamber of Deputies has passed the measure that revokes the government's decree of neutrality as between Germany and the United States. President Braz asked the Congress to authorize the seizure and use of the German merchant vessels lying in Brazilian harbors.

MEXICO.—On May 30 a band of Villistas captured the town of Ojinaga, across the Rio Grande from Presidio, Texas. United States troops are patrolling the border.

CHINA.—Wu Ting-fang, formerly Chinese minister to the United States, became acting premier after the removal of Tuan Chi-jui. Li Ching-hsi, a nephew of Li Hung-chang, was appointed premier on May 27, but he refused the office. The military governors of the provinces are for the most part friendly to Tuan Chi-jui, and some of them have threatened to secede unless President Li Yuan-hung restores him to office.

RUSSIA.—Agrarian disorders, including confiscation and destruction of property and incendiarism, are reported from the interior of Russia, where the disappearance of the old system of administration has left the peasants free to do as they like. In some parts of the country pure anarchy prevails, since the authorities at Petrograd have not found it possible under the strain of war to reorganize any efficient system of police control over so vast a territory. The industrial situation is also serious, for the committees of workmen are said to be insisting on a scale of wages that the factory owners cannot pay without going into bankruptcy. —On May 27 the Council of Soldiers' and Workmen's Delegates voted confidence in the present provisional government, and reports from the front are to the effect that the state of discipline is distinctly better. —There were indications of another crisis after Gen. Alexieff's speech.

of "peace without annexations or contributions" as a Utopian phrase. That speech angered the Socialists of the Council, who threatened to remove him from his office as chief of staff.

TORNADO.—A tornado, which passed over central Illinois on May 26, killed nearly two hundred persons and destroyed a great amount of property. The greatest loss of life was at Mattoon, Illinois.

THE GREAT WAR

(From May 24 to May 30)

The battle on the Carso plateau between the Italians and the Austrians was the chief military event of the week. Rome reported steady gains by Gen. Cadorna's troops, along the line from Görz to the sea, and announced the capture of twenty-four thousand Austrians. Vienna, on the other hand, asserted that the attacks of the Italians, although very formidable, had been checked, and that the Austrians had taken thirteen thousand prisoners. The truth appears to be that, as has often happened on the French front, a forward movement supported by artillery has gained a few miles of front only to be brought to a stop by the arrival of heavy reinforcements. The inactivity on the Russian front permits Austria to find the necessary reserves. At the end of the week Trieste, the Italian objective, appeared to be in no particular danger. Duino, once reported taken, is still in Austria's possession, but the Italians were working their way slowly round the town.

There was not much fighting along the British front, although preparations for another attack were said to be going forward. South of Laon the Germans tried to retake positions on the Craonne plateau and along the Chemin des Dames, but Paris reported that all assaults were repulsed, with the loss of only a few trenches. East of Reims there was some fighting, mainly to the advantage of the French, although none of the gains were important. The French made several air raids on the supply stations back of the German front.

© UNDERWOOD & UNDERWOOD

A GERMAN SHELL EXPLODING AGAINST REIMS CATHEDRAL

One of the most destructive raids on the English coast was made by a squadron of German aeroplanes on May 25. Bombs were dropped on a coast town—probably Dover—and seventy-six persons were killed. Three of the raiding planes were subsequently shot down by the British aircraft service. No Zeppelins were engaged in the business.

Madrid heard of the sinking of two Spanish ships, presumably by submarines. On one, the *C. de Eizaguirre*, about a hundred persons, crew and passengers, were lost. The news was followed by a great anti-German demonstration in the capital, in which twenty-five thousand persons took part.

The *Transylvania*, in use as a British troopship, was torpedoed in the Mediterranean, with the loss of 413 men. The weekly report from London spoke of 19 merchant ships destroyed by submarines.

The German submarines have sunk another hospital ship, the *Dover Castle*, but London declared that the wounded were all saved.

It was announced that a squadron of Japanese light warcraft was at work in the Mediterranean, convoying merchantmen and searching for German submarines. Mr. Lloyd George, speaking in London, said that the antisubmarine war was making satisfactory progress, that several new protective devices were being used, and that Great Britain stood in no danger of being conquered by starvation.

The German and Austrian Socialists at the Stockholm conference declared that their peace programme included the independence of Belgium, Serbia, Russian Poland and Finland, the autonomy of Galicia and the South Slavic states under Austrian sovereignty, international administration of trade routes and inter-oceanic canals, and restrictions on blockades and on mechanical means employed in maritime or aerial warfare.

The British government has forbidden speculation; if food control is established in the United States, an international board will probably be appointed to fix uniform prices for food in all the Entente nations.

The resignation of Count Tisza, the premier of Hungary, was confirmed. The event was regarded with some concern in Berlin, where the count was known as the chief supporter of Prussian influence in Austria-Hungary. It was reported also that Baron Burian, the Austro-Hungarian minister of finance, was to resign. On May 29 it was announced that Count Julius Andrássy, a pronounced liberal, had been appointed premier in Count Tisza's place. Count Andrássy is a supporter of electoral reform.

Reichsrath met on May 31. In session since July, 1914.

"Any manufacturer who thinks enough of his bicycle to put his name on it will furnish Fisk Tires at no extra cost"

THE bicycle manufacturer selects Fisk for his tire equipment—he knows there is no better bicycle tire made.

The superiority of Fisk Tires is so generally recognized among manufacturers that today practically all leading makes of bicycles are equipped with Fisk when they leave the factory.

When you buy new tires don't forget the judgment of all these manufacturers—Buy Fisk. You can't buy better tires—you can't get more tire value—and it won't pay you to experiment. Follow the lead of the leading bicycle makers—Buy

What greater testimony to the superiority of Fisk Tires could there be than this long list of factory "Fisk" equipped bicycles!

THE PERFECT SEED

By Maud Morrison Huey

YOUR life was stunted and cramped, little flower,
You had such a time to grow.
Day after day the sun beat down;
You longed for the sweet rains so;
And at times it seemed that your life was spent,
But you struggled up and laid
The poor little pitiful bloom you had
On the altar unafraid.

'Twas, oh, so far from the dream that you dreamed
As you pushed your way through the sod,
Of a beautiful blossom, heavenly sweet.
But this is the law of God:
From a blighted flower comes a perfect seed,
Untainted by drought or frost,
For the seed is the fruit of the dream, dear heart,
And oh, no dream is lost!

WAYSIDE TEXTS

YES, mother was always a very busy woman," an elderly business man said to an old friend of his boyhood. "With eight of us in the family to look after, and all the housework to do, she didn't find much time for books—not even the Bible. She used to read that Sunday afternoons, though, and I've seen her fall asleep from sheer weariness, trying to get through a few verses, the last thing before she went to bed. But mother was always finding wayside texts.

"I think we children all grew up with the feeling that the world was full of God—if I may express it that way. I can remember how, when one or two of us went with her to a neighbor's on a bright, starlit winter night, she used to call our attention to the star-studded sky, and I can still hear the awed note in her voice as she said, 'Just to think that *anyone* could look at that and then say that there isn't a God!' Sometimes, then, she would make us repeat with her that verse from the nineteenth Psalm, 'The heavens declare the glory of God, and the firmament sheweth his handiwork.'

"It was the same with the red pictures on the windowpane and with the ice-jeweled tree tops on the hills above our house. Mother had the soul of a poet, but her unwritten lines always ended with God. She loved flowers, and I can remember exactly how she used to exclaim over the delicate tints of an opening rose, 'What painter could ever mix a color like that! Perhaps she didn't say who could, but we all understood.

"Mother also looked for these outshinings and disclosures of God in the persons about her and in the things that happened every day. It always pained her to hear anyone condemned indiscriminately, and I can see to this day how she would fidget in her chair and drop stitches in her knitting until she got a chance to put in a word in his favor. And it was surprising how invariably she found good qualities and palliating circumstances that everyone else had overlooked. It seemed as if she set out with the conviction that God's image must be somewhere, and never gave up searching until she discovered it.

"Mother's formula for all sorts of disappointments and misfortunes was, 'Well, it will be overruled for the best.' Here again, she seldom brought in God's name explicitly, but none of us failed to comprehend that she saw God's hand guiding the event to an unforeseen issue. And when unexpected blessing came—perhaps merely some bit of good luck, as most persons unthinkingly call it—her face expressed far more than her simple, 'I am sure we ought to be thankful!'

"No doubt that was an utterly unscientific way of looking at things, according to modern ideas, but I know of nothing that I would rather give a boy of mine than what mother gave to us—that intimate sense of a divine personality in everything. It has been a restraint and safeguard in the hour of temptation. It has made prayer as natural and rational to me as asking a neighbor for something I wanted. And then, it's a saner philosophy to live by than any I've found elsewhere. It gives a man courage to take things as they come, without being too much upset by hard luck or losing his head when it's all the other way. Besides, looking for God everywhere grows into a habit of the soul, and gives you a new point of view from which to look at men. You stop taking a magnifying glass to pick flaws in a good character, and find yourself seeking just as hard to find something Godlike and noble in a bad one."

"NOBODY"

THERE is tragedy almost beyond bearing in Eleanor Franklin Egan's recent narrative of the shelling by an Austrian submarine in the Mediterranean of the English-owned, Greek-manned vessel Borulos, on which she was a passenger. The other passengers were mostly ignorant peasants—Greeks and Arabs, with their women and swarms of brown, dark-eyed babies. There were also twenty-two Englishmen on board at the time of the attack—sailors picked up, with their lifeboats, after the torpedoing of their own vessel. The submarine rose suddenly, quite near, and fired a single shell, which crashed directly at the mark. Instantly there was wild and dreadful panic.

The English lifeboats were rushed, those of the Borulos being neglected and useless; and frantic mothers who could not find a place in them began to throw their children into the sea and to leap in after them.

But the submarine's commander was not wholly ruthless. No other shell was fired, and when the boat into which Miss Egan had been pulled from the water approached it, close under the muzzles of the threatening guns, she saw an amazing sight. The two gunners stood motionless at their guns, awaiting orders; but every other member of the submarine's crew was excitedly engaged in the work of rescue or resuscitation. The commander himself, who was weeping, held an unconscious little Greek boy by the band of his knickerbockers. And he told Miss Egan in good English:

"Go on back to your ship. We are not murderers!"

They went back—those who survived—and found other survivors on the Borulos. Not one of the Englishmen had left her; and after the lifeboats got away, they had organized hastily to rescue as best they could, with ropes and rope ladders, those who were still swimming or floating near

the ship. Three of them leaped overboard to save drowning children, and two were drowned in the attempt.

It was one of these English sailors who told an incident that does, indeed, as Miss Egan puts it, "insist on being remembered." In the steerage of the Borulos was a troupe of Japanese acrobats, one of whom had with him his wife and her young baby. The Englishman, busy with his life line, saw the tiny Japanese mother float toward him from behind the rudder, still clasping her infant.

"I threw her the rope and yelled to her as if I was crazy," he related. "She caught it all right; but what do you think she did? She just turned her face up to me and called out something about her not amountin' to anything. It was something like 'I nobody! I got nobody! Nev' mind!' and she deliberately passed the rope over to some one else. Well, so did I. It was more than I could stand."

With her drowned baby in her arms, the heroic little "nobody" drifted quietly away to her death; and another, who perhaps still had somebody, was saved in her place. But the man she did not allow to rescue her, simple sailor though he was, pronounced upon her an epitaph that neither scholar nor poet could have equaled. He supposed he should have to live decent for the rest of his life, he said; because no one could remember that little Japanese woman's face and be anything except decent.

KING OF THE "MUSHERS"

THE Malemutes were kenneled for the snowless season, says the New York Sun, and Tommy King, the champion dog "musher" of Alaska, took a job in a store in Fairbanks. But Tommy King, who knows the Alaskan trails as well as a man knows the inside of his change pocket, was never meant for an "inside man," and he who had come unscathed through perils of the icy wilderness fell through an elevator shaft and was so seriously hurt that he had to come "outside" for surgical help. The Chicago doctor told him that he would be lame for life, and must never go outdoors when the mercury invaded minus territory in the sealed tube—not the most pleasing orders for a holder of records for speed and endurance over the frozen trails.

Tommy King went north in the great days of the Klondike. He and his dogs have "mushed" at least fifty thousand miles together. No one else has ever made such a record. The winter of 1910-11 was one of the hardest that ever set the clamps of frost on interior Alaska. In that winter Tommy King, behind his dog team, made five round trips between Fairbanks and Iditarod, and that sets six thousand long miles end to end. The story of one of those trips will bear repeating.

Christmas was coming on. Iditarod had nothing in camp except reindeer and caribou meat. King bought several hundred pounds of chickens and turkeys, besides beef and pork, and with this and a quantity of newspapers and magazines set out for Iditarod. When he got away from Fairbanks the mercury was at forty on the minus side of zero; and it kept getting colder.

At Meigs' Point, the coldest spot on the Yukon, the "musher" almost succumbed. "I thought it was my last trip," he said in telling the story. "The distance didn't seem to grow smaller and the cold bit deeper every minute. The dogs flinched a little in the face of the wind; but they kept on, although gusts of wind nearly swept them off their feet."

Reaching the roadhouse at last, Tommy drove his dog team straight through the opened door, and had to be dug out of his ice-stiffened parka. He made Iditarod late on December 23, sold his chickens at two dollars and a half a pound, his meat and turkeys at two dollars a pound, the magazines at two dollars apiece, and he received fifty cents each for delivery of the letters he carried.

The doctors told Tommy King that he must never go back to the north, but not the pain in his broken hip or the solemn warnings of the doctors could keep him away. He may never again navigate the frozen trail, but "snugged up" at Fairbanks he will see the sleds come and go, and hear the stories of men who have been trying to break the records that he made in his palmy days.

ON THE BRINK

WHAT thrills can be keener than the thrills of an aviator? Supreme successes, the narrowest of narrow escapes, disappointments and tragedies, follow one another swiftly in the lives of the winged soldiers who are fighting in Europe. What were the thoughts of Lieut. Robinson when he brought down the Zeppelin over London, and what was in his mind when recently the hostile guns brought him down in France? Perhaps it is beyond the power of words to express them.

In Tales of the Flying Services, Mr. C. G. Grey tells of a great disappointment and an extremely narrow escape that fell to the lot of a young aviator at about the time Antwerp fell. Late one afternoon this officer was out on duty, when far away to the east he spied a long, pale shape shining in the sun. It was obviously miles away. He had already been in the air for some time, but he knew just how much gasoline he had in his tank when he started and how long he could fly before he would have to come down. He decided to chase the thing for half an hour; that would leave him a shade over half an hour's fuel with which to get home. Off he went.

As he got closer it became clear that the object was on the ground, and distinctly yellow in color, which proved that it was not a Zeppelin, for all Zeppelins are gray. The size showed that it was not a Parseval; and so he began to think that he had discovered something really new. Still wondering, he came down lower. Then, suddenly, he saw how he had been sold. His colossal airship was a long, thin strip of overripe grain along the side of a hill that had been lighted up by the rays of the setting sun.

Sadly and swiftly he made his way toward home, wondering whether he could reach it, for in his enthusiasm he had overstayed his allotted time. At the height at which he was flying he was well in the sun, but underneath it was dusk. He could just see the course of canals and rivers gleaming out of the darkness. In that part of Belgium there is almost always flat ground on each side of the canals, and he made up his mind to land parallel to a watercourse of some kind.

By this time he calculated that he must be over territory held by Belgians or by British, and not by Germans. So he edged gently downward, and when he thought his gasoline must be nearly all gone, he made for a gleam of water.

Very gently he let his machine down until the water alongside which he was flying appeared nearly on his own level. Then he switched off his

engine and glided slowly along, anxiously feeling for the ground he could not see. The wheels touched, then the tail skid felt the ground, and without a jar the machine came to rest. The pilot heaved a sigh of relief and climbed out.

Once on the ground he was able to see nearby objects fairly well, but, as he walked round to the front of the machine, the ground before him suddenly vanished. Cautionally he approached the limit of visible grass and discovered to his horror that the machine had pulled up on the very edge of a deep, disused gravel pit. Two yards more and the wheels would have run over the edge, the tail would have lifted, and the machine would have plunged forty or fifty feet into a stagnant pool, where he would certainly have been drowned if he had not been killed by the fall.

THE HABITS OF THE GUANAYES

FIVE years ago the Peruvian government, noticing a diminution in the supply of guano, appointed Mr. H. O. Forbes to investigate the cause and to propose plans for the rearing and protection of the birds. On making a trip to several of the Chincha islands, the naturalist was astonished to find no guanayes whatever there. During the previous nesting season the birds, for some unknown reason, had migrated in large numbers, leaving their nests with living young and eggs unprotected. The ground was covered with nests filled with the sunbaked, mummified bodies of the starved young birds or with unbroken eggs. So

A NESTING COLONY

immense was the feast left to the gulls, vultures and terns that they had been able to dispose of only a small part of it.

Within a few weeks most of the guanayes returned to their old haunts, but they showed no inclination to nest again that season.

Nothing is more interesting, says Mr. Forbes in Country Life, than the morning departure of these birds for the feeding grounds. As they can rise from a level surface only with great difficulty, they make their way in great phalanxes over so as to attain sufficient air resistance to establish flight. Advancing in their habitual erect attitude, the birds resemble nothing so much as well-disciplined regiments of pygmy soldiers, attired in white tunics and black headgear. For hours at a time the army falls over the cliffs in a black cataract. On one occasion I was able to fix by bearings the extent of a single colony of feeding birds and to compute that it was composed of 10,250,000 cormorants and other guanayes.

The birds return later in the day in a livelier mood, with their ranks deployed on far-extending, widely spaced files. They describe long, deep, serpentine undulations, with each file moving as if it were part of a great carpet of loosely strung beads shaken rhythmically by an unseen hand; for as each bird arrives at the place in the air where its predecessors rose and fell, it repeats the identical movement with the utmost precision. Many square miles of deep, azure, cirrus-flecked sky thus peopled is a sight worth a long journey to witness.

TRIPPING UP CY PELTON

SOUR John Marvin glanced out of the window of the shop where he was making an afternoon call. "Cy Pelton is headed this way," he announced, "and I will make a prediction. If anyone here present ventures to speak of anything out of the ordinary that he has heard of or read about, Cy will follow with something in the same line, only a little more remarkable, that he has been an eyewitness of, and he'll be sure to place it in some place pretty far from this town. But Cy Pelton needn't flatter himself that he ever fools me. I have sense enough to know that he always makes up his story as he goes along, and I live in hopes of seeing him tripped up some day."

At that moment the door opened and the reputed spinner of "yarns" walked in. At his heels came Uncle Noah Briggs, the acknowledged oldest inhabitant.

"I've just been reading an interesting piece about Abraham Lincoln," Uncle Noah began, as he accepted the easiest chair.

"When he was a young man, clerking in a store, some one stumped him one day to pick up a barrel of rum off the floor and hold it up to his mouth and drink out of the bung-hole; and he did it. But after he laid the barrel down again he spit every drop of the liquor out of his mouth. That goes to show how strong Mr. Lincoln was in his arms and also how strong temperance he was."

Uncle Noah would have continued, but he made a fatal pause, and Cyrus Pelton got the floor.

"I had an uncle, on my mother's side," he said, "that I guess was full as strong in his arms as ever Mr. Lincoln was, and even stronger temperance. He was a blacksmith in the town of Industry."

"One time, when I was a small boy visiting up there, Hiram Quint, one of Uncle Life's near neighbors, was building a big barn, and he had asked a lot of men to the raising."

"In those days almost everyone drank hard cider, and thought nothing of it. But Uncle Life was dead set against it. When he came along that day and saw the big barrel of cider that Mr. Quint had provided for refreshment, he says, 'Hiram, your raising would come on full as well, and some chaps here would be better off, if you would carry that cider down to the brook and dump it.'"

"I saw Hiram wink at the bystanders, and says he, 'I'm hardly strong enough. But if you are,' says he, 'you're at liberty to do it.'"

"All right," says Uncle Life, and he made for his blacksmith shop. In a few minutes back he came, bringing a horseshoe that he had hammered out in such a way that he could make the heel calks fit into the bung-hole of the barrel as it lay there on the ground. Then, with the horseshoe as a handle, he lifted that barrel of cider as it had been a carpetbag and carried it to the brook and emptied it."

"Now, if you will give me a chance, I should like

to put in a word," said Uncle Noah, with a show of impatience. "It so happened that I was at the raising of Hiram Quint's barn."

"I didn't know that you were acquainted in the town of Industry," said Cyrus, in evident surprise.

John Marvin's eyes sparkled. "So there was such a raising," he said. "Well, that bears out Cy's story, so far. I suppose the rest of it was equally correct, Uncle Noah?"

"No, it wasn't," replied the old man emphatically; whereupon one of John Marvin's rare smiles lighted up his grim features.

"Now, I always try to be accurate," said Cyrus, hitching uneasily in his chair, "but I was only a little shaver at the time, and maybe my recollection is a little at fault."

"No, you were wrong, Cy," said Uncle Noah firmly. "When you broke in on me I was about to tell the story, and tell it as 'twas. It wasn't a barrel of cider that your uncle carried down and dumped in the brook in the way and manner that you described. It was *two* barrels of cider—one in each hand."

THE MOST VALUABLE OF SCRAPBOOKS

WHAT is probably the most valuable—and certainly the most interesting—scrapbook in the United States is a large but very ordinary appearing volume owned by the government and kept by Maj. Alfred R. Quaife, who has charge of the safe at the Treasury Department in Washington. This scrapbook contains specimens of every kind of paper money issued by the United States government since 1865, when Maj. Quaife assumed his present duties, and the face value alone of the notes pasted in the book is seventy-six thousand dollars. Inasmuch as many of the notes are now obsolete, while others have a considerable historic value, the scrapbook would undoubtedly bring in the neighborhood of one hundred and fifty thousand dollars if it were put up at auction.

Shortly after he took charge of the big vaults where the Treasury Department stores the money that it pays out every day over its counter, Maj. Quaife conceived the idea of starting a scrapbook that would serve a double purpose—as a record of the various issues of paper money authorized by the government and as a means of identification of old notes.

On a number of occasions the book has been of great service in detecting counterfeiters of old issues or in identifying bills with which banks were not familiar. It would probably be very hard to cash some of the paper money in this scrapbook at the present day, for many of the older bills are very queer-looking, and there is one one-hundred-dollar gold certificate, dated January 2, 1877, that is engraved on one side only.

The value of the book is constantly increasing, for, in addition to the new bills that are added to the collection from time to time, the old notes become more valuable as they become more and more rare.

The scrapbook, as befits so precious a volume, is kept in a safe at the Treasury Department, over which hangs a frame inclosing three government notes—a gold certificate for ten thousand dollars, a silver certificate for ten thousand dollars, and another silver certificate for five thousand dollars.

WORTHY TO BE PRESERVED

A "FISH story," one hundred years old, retold by a contemporary, shows that our story-tellers of the present day had no unworthy representatives in the past. The story originally appeared in the Goshen Independent Republican (New York) of October 18, 1820, and, condensed, runs as follows:

"On August 19 a large fish was seen alongside the schooner Brilliant. One of the crew fastened a silver dollar (in lieu of other bait) to his hook, but the fish swallowed both hook and bait and bit off the line. A second hook and bait also disappeared. On August 21 a third attempt was made with the same kind of valuable bait, but that also shared the fate of the others."

"Four days later, after a run of three hundred miles, a shark was caught with a bowline, which contained two of the hooks baited with two of the dollars. In about fifteen minutes a dolphin was caught, which contained the other hook and dollar."

The chronicler of this marvelous story made the following noncommittal comment: "As our correspondent is a gentleman of benevolence and sobriety, we regard this as a very singular circumstance indeed."

A BROAD DISTINCTION

ON a tramping trip, says Interviews, Irving Bacheller, the novelist, discovered a chin-bearded patriarch on a roadside rock.

"Fine corn," Mr. Bacheller remarked tentatively, waving his hand toward a hillside filled with straggling stalks.

"Best in New Hampshire," said the sifter.

"How do you plough that field?" asked Mr. Bacheller. "It's pretty steep."

"Don't plough it," said the sifter. "When the spring thaws come, the rocks rolling downhill tear it up so that we can plant corn."

"And how do you plant it?" asked Mr. Bacheller.

"Don't plant it, really," said the sifter. "Stand in the back door and shoot the seed in with a shotgun."

"Is that the truth?" asked Bacheller.

"Of course not," said the sifter disgustedly. "That's conversation."

"LOW BRIDGE"

THE driver of a small motor car, says the Indianapolis News, speeded out of a cross street and struck a street car squarely amidstships. The street-car conductor got off to investigate and to collect evidence for his official report.

"What's the matter with you?" he asked the driver. "Don't you know you can't run under my car with your top up?"

NO SUICIDE

OH, Miss Smith," said Willie, "may I be dismissed at eleven? Father is going to cut his head off, and I want to see him do it." Miss Smith was somewhat surprised, but not more so than Willie was when he found that she had not heard a word about his father's going on a hunting trip and shooting a splendid deer.

THE CHILDREN'S PAGE

HOW LITTLE BEAR HELPED THE WILDCAT BABIES

BY FRANCES MARGARET FOX

ONE time the wildcat babies ran away. It was late in the afternoon when Little Bear found them crying beside the brook. They were not far from their home, but the trouble was that they were on the wrong side of the brook.

"Swim across!" advised the bearers. But the baby wildcats were afraid of the water and would not try to swim.

"Wade in, wade in!" advised Father Deer. The baby wildcats shook their front paws and would not wade into the water; they did not like to get wet.

"Slide right in and paddle over!" suggested Mrs. Otter. But the baby wildcats would not slide in and paddle over; they were afraid of the water; they did not like to get wet.

"Float over, float over!" advised the ducks. But the baby wildcats would not even try to float.

"Jump on a log and spread your tails wide and sail across!" said the red squirrel. But the wildcat babies did not dare to jump on a log. They were afraid that it would turn over and dump them into the water.

By the time Little Bear came along, the baby wildcats were crying big tears into the brook and wailing at the top of their voices. Little Bear could not help laughing; but he felt sorry for his little neighbors, and determined to help them out of their trouble. He thought and thought and thought and thought! At last he asked the baby wildcats how they happened to be so near home and yet on the wrong side of the brook.

"Mother went away and didn't come back,"

here, and it is a wonder he didn't find you! Scoot into the house this minute!"

"Little Bear is good!" piped in the shrill voice of little sister Fluffy. "He made a stone bridge for us and brought us home!" Little Bear loved her for owning up like that.

"Well," said Mrs. Wildcat, "if he knows what is good, he will be glad to have me take him home, or the circus man may get him."

Little Bear knew what was good for him;

THE BOY AND THE FLAG

BY JOHN CLAIR MINOT

*Do you know the story of it?
Do you sense the glory of it
With a pulsing rapture that thrills
you through and through?
When you see it gleaming there,
When you see it streaming there,
Do you grasp the meaning of those
Stars and Stripes to you?*

*You can see the beauty there—
Can you read your duty there
When you see it flutter against the
sky to-day?
Does it stir the soul of you,
Does it fill the whole of you—
The flag that flies above you and
half a world away?*

*Think of those who wrought for it!
Honor those who fought for it—
Who gave their lives to save it in
the darksome days of old!
Not a blot is staining there!
Every star remaining there!
All the hopes of millions its
rippling stripes enfold!*

*Show yourself a man for it!
Do the most you can for it!
Remember that you owe it the
best you have to give!
Duty's voice may call to you,
The post of honor fall to you,
O then to die beneath it were
sweeter than to live!*

that she had seen in Shores' window and a set of books; and before John had come over, Marnie had thought that it would take her every single minute until mother was ready for her to decide which she would choose. But now, all of a sudden, here was a strange new idea.

She sat down in the library, perfectly still for ten minutes, and then ran upstairs.

"Mother!" she called. "O mother! Could I get a flag with daddy's money, do you think?"

"Yes, indeed," said mother.

"A big flag?"

"Yes, a fine big flag, I should think," said mother. "Daddy was going to give you a particularly fine present, you know, because he had to disappoint you this morning. But what do you need of a flag? Daddy and I have a fine one to put on the front veranda."

Then Marnie told her all about the boys who laughed, and the flag that she seemed to see but that the boys did not see, and how she felt that they must have a real flag.

Mother smiled and nodded and smiled again as she listened—and I think a little bit of mother's money, too, went into the flag that they bought that afternoon, for it was just as beautiful as a flag could be,

and as big as a nine-year-old girl could possibly carry over her shoulder.

But the best thing of all happened the next morning when she stepped out of the door, with her head high and her precious flag waving proudly aloft. For there on the sidewalk were all the little boys, with John at their head. Not Marnie or Barbara Fritchie, or George Washington himself, could have seen a thing to criticize in the way they saluted the flag that morning and marched behind it, a guard of honor, until it landed safe and sound in their room at school.

MARNIE AND THE FLAG

BY WINIFRED ARNOLD

ERECT and alert, like a little soldier in blue gingham, Marnie stood at attention and saluted the flag. Then with blazing eyes she turned upon the two little boys across the aisle, whom the teacher was scolding, and fairly withered them with a scornful glance. To think that there could be two American boys who would giggle during the daily salute—giggle and have to be made to do it over!

John, however, was her neighbor, and as soon as Marnie came out to play that afternoon he ran right over.

Marnie drew her skirts round her with great dignity and started back toward the house. "You know well enough, John Grover!" she said. "I don't want anything to do with a traitor!" And she held her curly head very high indeed.

"Traitor!" stammered John. "What do you mean?"

Marnie turned round just for a minute. "Any boy who laughs at the Stars and Stripes is as bad as a traitor!" she said.

John took a step after her. "Why, what do you mean, Marnie?" he said. "I never laughed at the Stars and Stripes, never! Why, I had a great-great-grandfather or something that died in the Revolutionary War! So!"

Marnie turned again, and her eyes blazed even more than they had before.

"That makes it all the worse!" she cried. "What would your great-great-grandfather think if he knew how you laughed at the flag when you ought to have saluted it?"

"Oh!" John understood now, and he felt better. "Is that what you mean? Why, there wasn't any flag there to laugh at, Marnie Evans. That's the joke, don't you see? Saluting the blackboard and pretending it's a flag!"

"Why, John Grover," cried Marnie, "do you mean—why, it is there! I mean it's just the same as there. Don't you see?" She stopped helplessly. "Why, when I salute or when I sing The Star-Spangled Banner, I do see it—not a real one, of course, but something up in the air, bigger and lovelier than any flag I ever saw—almost. And that's what I salute. O John, don't you understand?"

But John shook his head. "No," he said firmly. "It's because you're a girl that you see things in the air like that. When I see a real flag I'll salute all right, and so'll the rest of the fellows; but saluting the blackboard is just a joke. So! Come on now and play."

But Marnie shook her head and walked slowly up the steps. She had something to think about, and wished to be by herself.

To begin with, Marnie had to make up her mind to the idea that other people did not see the great beautiful flag that she saw up in the sky whenever she heard The Star-Spangled Banner or went through the pretty exercise that they call in school Saluting the Flag. And then somehow she saw that it was not a good thing for boys to laugh about saluting the flag, even when there was not any flag there.

And last, there was the question of daddy's present that he did not bring her from New York.

For Marnie's father had come back only that morning from New York; and as he had been too busy to buy her a present there, as he usually did, he had promised to let her go downtown with her mother and choose a present for herself.

Now the trouble was that there were two things that Marnie wanted—a beautiful doll

WHEN ALICE WALKED IN THE WOOD

BY EMMA S. FRANCIS

On a summer evening,
Just as day was spent,
Through a little wood I walked,
Singing as I went.

Then I ceased my singing:
Peace was over all;
Suddenly upon my ear
Fell a cheery call.

Just beside the pathway,
From a chestnut tree,
Peered a curious little chap,
Beckoning to me.

It was not a squirrel:
It was not a bird:
It was not a falling leaf
By the breezes stirred.

Gnome it was, or pixy,
Or a fairy fay,
That had come to talk with me
From an olden day.

Then why was I frightened?
Surely I don't know!
Yet I turned and ran away
Fast as I could go.

If I had been bolder,
If I had not stirred,
Who can know the secret things
That I might have heard?

Things of woodland magic,
Tales of long ago,
Bits of wondrous forest lore
That the fairies know.

Through the wood I'll wander
On another day;
Then if gnomes or pixies call,
I'll not run away.

DRAWINGS BY WALT HARRIS

AT LAST THERE WAS A BRIDGE OF STONES ACROSS THE BROOK

Yowler explained, "and I said we ought to stay home and be good, but —"

"He did not!" interrupted Billy Wildcat. "He said, 'Ma will never know if we go walking just a little way,' didn't he, Fluffy?"

"Yes, he did," answered Fluffy. "And we walked and we walked until we were lost—and Yowler was the worst one of us. Why, why, Yowler!"

"Don't quarrel," said Little Bear. "I want to know how you happen to be on the wrong side of the brook?"

"Yowler, he made us cross the away-off-seven-mile bridge," was Owley's answer.

"If you don't stop this quarreling, I shall leave you," threatened Little Bear. "And now I know what to do, if you will be good. We will build a bridge. I'll carry big stones and drop them into the brook, and every one of you shall bring little stones."

So straightway Little Bear began building a bridge of stones. It was hard work, but he tugged at rocks and rolled stones and lifted stones and splashed and struggled and struggled and splashed until at last there was a fair bridge of stones across the singing brook. The baby wildcats did not help much because they were too busy quarreling and crying.

"Now step over," advised Little Bear, "and be careful that you do not slip."

One by one the little "fraid-cats," careful not to slip, crossed the brook, stepping high and carrying their tails in the air. At last Little Bear left them at their own door, just as Mother Wildcat appeared.

"You naughty children!" she exclaimed. "I have searched the woods far and near for you! There is a circus man wandering round

so he gladly put his little wet paw into Mrs. Wildcat's paw and trotted along by her side. Mrs. Maria Wildcat meant well, and he knew it. Some folks are always irritable when they are worried. Anyway, she took Little Bear home; and great was Little Bear's surprise when, on reaching his own gate, Mrs. Wildcat suddenly stopped and said, "Mer—row! Mer—row!" in her most impolite fashion.

At the same moment Father Bear and Mother Bear came running down the path from the house to see what was the matter; and at that very minute up jumped the circus man from beside the gate, where he had been hiding, and ran away as fast as he could go—so fast that he looked like a straight line flying down the road!

For the first time in his life Little Bear kissed Mrs. Maria Wildcat good night without being told. And all that evening until bedtime he and Father Bear played a merry game of Mrs. Maria Wildcat scaring a circus man—"Mer—row! Mer—row! Mer—row!"

THE SHIFTING SANDS OF THE CIMARRON

IT was the third of the bad years in that part of the West; the annual hot wind had again laid low the corn, and farming men and women, gazing stonily over the arid plain, had a certain wonder that God could let the wheeling sun so blaze and gloat over the little remainder of their crops. Something more divine than courage animated those who could look and speak cheerfully in mid-July, and that was a time when many a strong man derived from wife or daughter or sister the spirit to hold on against despair.

Lucy Harlow was alarmed by her husband's state—his black moods had grown longer and his talk more desperate in spite of her lilt-ing way. She began to fear his brain was affected.

"It's beggary to stay here, and we can't get out. Our two years' work has gone for nothing; the land is worth nothing. You'd be better off without me, for then you could go home to your father—and what I live for I don't know."

"You've got the children and you've got me, Will," she said, coming to him affectionately; but he turned away with a groan and went out to gaze at his cows. Would the drought continue until they should become again mere animated skin and bone?

Before he came back Lucy had conceived a plan. Change he must have, and it would be good for the children and herself.

"Will," she said, "I get downhearted myself, too, often. I wish I could see somebody belonging to me; it's two years now, and only strangers all round. I'm thinking of my sister Eliza over Mulhall way. You've got to take wheat in to the railway one of these days, for the flour is most out. Suppose you take me and the children and we go all the way to Mulhall."

Now the railway was twenty-five miles distant, but Mulhall was seventy-five miles farther away. Will looked blank, and groaned with objections that seemed insurmountable.

But Lucy blew them all away before the next evening. Her neighbors to the east had agreed to care for the cows and milk them for the milk; to feed the hogs in consideration of being allowed to keep the little black-and-white sow; to mind the fowls at the price of the gray hen and fifteen chicks.

"But —"

"No use 'butting,' Will. We'll take care of the horses ourselves, for they'll be taking us to Mulhall; and the children will be with us. Mrs. Scarlett says she will feed the cat and look after the pups if we let her keep the brindly one. Now you can't think of another thing against taking two weeks off and visiting my sister Eliza."

So the next day Will filled six bags with the precious wheat,—they had reaped barely enough for breadstuff that year,—and Lucy did her little baking and washing, and packed her box of rations for the journey. She sang as she worked, and Will whistled for the first time since "the annual" had blighted the corn. It was good medicine that the young wife had devised.

They were to have started on a Wednesday, but on Wednesday the incredible happened: it rained. It was not a great rain, but it was enough to have saved the corn had it come ten days earlier; and Will fell to groaning about the inscrutable ways of Providence as they traveled on Thursday over the long road between the hopeless fields.

"If the ways of Providence are inscrutable, there's no use talking about them," said Lucy. "Don't let us get sighing about losses, or the past, or hard luck, or anything. Let us look forward; this is our first holiday for ever so long. How cool and fresh the air is after the rain."

"All right, look forward we will," said Will, bracing up. "How cool and fresh the Cimarron will be, maybe."

Lucy's face fell. She had not before thought of the effect of yesterday's rain on the treacherous river, which they must cross. Still, they could turn back if the ford was in a dangerous state.

When they sighted the river from the top of a high bluff the spectacle nearly took their breath away. In ordinary times the Cimarron appears as a sand plain nearly a mile wide, with a few narrow streaks of running water. Now there were but a few spots of sand visible; the river bed was entirely covered with yellow water, and everyone in that region knows that the sand of the Cimarron is somewhat "quick" when covered with a stream.

As the wagon approached the river, Lucy's

fears increased, for the water was running more swiftly than she had supposed. They had come nine miles on their journey, and it did seem too bad to turn back. "But," said Lucy, "we'd better turn round than get mired in quicksand."

Will stood silent and looked a long time at the water, trying to estimate how much of the sand was barely wet and how much covered with a dangerous current. His heart was now set on the visit to Mulhall, and, man like, he hated to retreat without having ventured anything. Presently he took one of the horses out of the traces and waded in.

"I'll cross this way first and see if it is safe for the wagon," he said.

It seemed safe enough. He did not sink to his hips during the passage; frequently the

children, who had begun to shriek and cry. Will sternly urged his horses. Soon they had struggled across the gully and had scrambled up the steep. And then, as the front wheel struck the edge, the gray mare fell down. Instantly the wagon seemed to settle lower in the sand.

In vain Will shouted at and whipped the beast; she was discouraged; the terrible sand was rapidly going from under her and piling against her side. Her mate, the bay horse, was rearing and pawing, trying to get away.

Will stared desperately at his wife in the wagon. He could not hold the bay and lift the gray at the same time. The man's thoughts were divided between his beloved ones and the clothing and breadstuff in the wagon, which

with all his strength, the man looked desperately at the woman now. And again her sense came in.

She led the horses sharply to the right, then sharply back and to the left, seesawing the wheels; then she put the beasts at the straight pull again. The wheels had been moved, and still they did not rise.

Again Lucy hurried them from left to right, seesawing. Will sprang out and seized reins and whip. His greater force seemed to enter the horses, and with a mighty rush they raised the front wheels.

Forward! Up! The wagon was on the shallow. But the children had been tumbled against the back of the seat and then, struggling and screaming, had rolled under it. Lucy, her heart sore to help them, had to leave them there; for Will, fearing that another gully might form before them, rushed the horses on until they reached a place where the sand was higher than the water.

There he stopped them and brought the doubletree back to its place, while Lucy clambered back into the box and lifted the children to her arms.

But the halt could be but a few seconds. There was no telling how soon the current, eating at the sand bank's edges, might sweep it away. Forward!

As the horses reluctantly left the sand bank, Lucy kissed the children and sprang out into the water; the less weight in the wagon the greater their chance of escape. So she floundered along; sometimes up to her waist, sometimes to her arm-pits,—for she is not tall,—and yet it was not the current that scared her, but that dreadful dragging and sucking of the sand at her feet, which felt as heavy as if they carried lead.

She would have given everything but what she was trying to save for one moment of rest; but Will pressed on as fast as voice and whip could urge the horses. Under his wise tyrannic force they pulled, sprang, snorted, worked desperately, until at last they rose up on the shore, and would have stumbled down there instantly had he not insisted on ten yards more.

Down sank the horses in the traces. The woman gathered the children from the wagon box and sat in the shade of the wagon, for the sun was blazing overhead. The man, going about the wagon box, felt of his little-damaged wheat and of the wet bundles of clothing before he came to his wife and children. He was very contrite.

"Lucy! Good Lord, to think of me risking you! And you saved us! My heavens, Lucy—if I'd lost you and them!"

She looked up with happy tears in her eyes. "I guess you've found out you've got something to live for, Will," said Lucy, as she pulled him to his knees beside her.

And from that first day on the Mulhall trip Will Harlow lamented his fate no more than he does now, when good years and high-priced wheat have made him one of the prosperous men of the Cimarron Country.

A FIVE-MILLION-DOLLAR LOSS

IN the bullion room of the Bank of England stands the grand balance. It is a machine, says a contributor to Pearson's Weekly, that was constructed primarily for testing light gold coins.

Standing approximately seven feet high and weighing nearly two tons, this wonderful piece of mechanism can weigh a piece of thistle-down or a four-hundred-pound gold bar with equal accuracy.

Before being used it always has to be carefully dusted; for otherwise the dust that has settled upon it even in the course of a few minutes, although invisible to the naked eye, would cause it to register inaccurately. So responsive is the machinery that a postage stamp placed on one of the two weighing portions moves the index six inches.

After the new English currency notes were issued the grand balance was kept busy virtually day and night weighing the gold coinage that was called in and replaced by notes. It has now been found that the total loss of gold owing to the abrasion of the coins as they passed from hand to hand, in the course of circulation, amounts to nearly five million dollars.

That, however, is not quite so alarming as it sounds, for the loss is spread over a period of twenty-five years—from March, 1892, that is to say, up to the present time. Twenty-five years is reckoned to be the legal "life" of a sovereign at full face weight.

DRAWN BY W. F. STECHER

IN HER ARMS SHE PRESSED THE CHILDREN, WHO HAD BEGUN TO SHRIEK AND CRY. WILL STERNLY URGED HIS HORSES

water barely covered his feet; sometimes he walked on little spaces of bare, wet sand. On the opposite shore he stuck up a pole to guide him, and then waded back slowly to his young wife.

"If nothing shifts, we can cross all right," he told her. "The water can't get into the wagon box, either, if we keep moving. It's when you stop that the sand feels dangerous underfoot."

His easy passage to and fro had encouraged Lucy, and she was eager to undertake the crossing. But it is one thing for a woman to be undaunted on dry land and quite another to keep up her nerve with water rolling and gurgling under the box of her wagon—and it traveling on quicksand.

Lucy was so dizzy in a few seconds that she shut her eyes and clasped the children tighter; still she seemed to see the river rolling and the wagon drifting away. Every moment she expected to feel the water round her feet. Meantime Will led his team coolly, and the children, staring now at the flood and now at their calm father, gave no sign of fright.

Stirred by the current, sand rolled from the bottom in such quantities that the footing went from under the horses and the man as they trod. It was a terrifying sensation. The horses snorted with fear as they pressed quickly on, and Will urged them by his voice to keep them from utter discouragement. The man himself was not terrified, although he was anxious, and wished he had not brought the wagon in. He had a definite thing to accomplish, and his physical courage was of a high order. Even though he dreaded to find a gully washed out in the path since his crossing, he was firmly resolved to "get there"—to the shore beyond this turbid current and shifting sands.

At an alarming jerk Lucy opened her eyes. The horses had suddenly plunged much deeper; she saw the current pushing at their sides. The wagon was going down; its front wheels dropped with a jolt. Water was gurgling against the box, and she drew up her feet with a cry:

"O Will, let us turn back!"

Will was wading to his waist. He stood aside and shouted, "Git up there! Git up!" and cracked his black-snake whip. "Sit down, Lucy!" he yelled. "Keep your weight low! We'll get through all right, yet!"

She sank down in the seat; the water was almost to her knees. In her arms she pressed the

was necessary to their lives. He knew not what to say. The idea of calling on his wife for help never occurred to him.

He was angry at circumstances. Had he spoken at all he might have spoken sharply, and Lucy would have supposed he was provoked with her. Still he was not cowed; he was fighting down the plunges of the bay and trying to lift the gray by pulls and kicks and shouts.

Lucy stared and understood. It was death all about and under them—unless she could help. She forgot fear, forgot all physical repulsion to what she must do. Down in the little girl's arms she pushed the smaller brother, with "Hold him tight, Luce." Then she tore off her skirts and jumped out of the wagon. "I'll unhitch the tugs!" she cried.

When she got the tugs loose the gray mare struggled up, and Will led the team out into shallow water; part of the sand washed out of the gully had swirled and settled to lessen the depth on the shelf.

"Come, Lucy, hold the horses while I get the children. We can save ourselves, anyway, and get ashore."

She struggled up the rise and spoke. Now that she was wet, she was as game as he, and her greater shrewdness informed her that there was still a chance to save their wagon and other property.

"We'll save the wheat," she cried, "and everything!"

She directed him in a few words. He plunged in and took the doubletree and fastened it to the end of the tongue, which was on the shallow. Meantime she led the horses to and fro to keep them from sinking. The dreadful sensation of the sand moving from under her feet she will remember to her dying day—and still more clearly the faces of the children staring at her, and the hurrying wild of water in which the wagon box was so small an island.

Will was desperately speedy and yet accurate in every movement; the fight under his wife's eyes put him at his best.

"Now, Lucy!" and she brought the horses to the doubletree. In a trice he had hitched them. "Now, Lucy!" He jumped down to seize one of the front wheels, while she with whip and voice urged the team to pull.

But they could not budge the wagon; the sand had settled round the wheels much as snow drifts against an obstruction. Lifting

SAVE THE FRUIT CROP

**We said this LAST YEAR—
We say it again**

This is a year for thrift and service. We must feed not only our own people, but also millions in Europe. The frightful waste of fruit is a national reproach. Help stop this unpardonable extravagance. The fruit we waste would feed Belgium.

THE United States Government urges preserving as a home duty. Preserved fruits are energizing and nourishing. They vary your menus. They reduce the cost of your table.

America's canning and preserving industries are models for the world. Their products are pure, appetizing and wholesome. Support them.

If you preserve at home, put up more fruit than ever before. Get jars and glasses, bottles and crocks ready to save the fruit crop. Put away dried vegetables. The American housewife who practices thrift places herself in the ranks of those who serve their country.

You can show your thrift in no more convincing way than by combating the national tendency to squander this country's wonderful fruit crop. Whether you buy preserved fruits from your grocer or preserve at home you perform a service to your own family and to the Nation.

American Sugar Refining Company

"Sweeten it with Domino"

Granulated, Tablet, Powdered, Confectioners, Brown

Domino Granulated Sugar is sold in convenient-sized bags and cartons

The increased cost of preserving because of the higher price of sugar is less than the increased cost of most other foods

IN A FAR COUNTRY

IT was a beautifully bright, sunny summer afternoon in Zermatt. In the clear air the mighty peak of the Matterhorn gleamed like an inverted icicle. It seemed preposterous that human beings should attempt to climb it, and incredible that any should succeed.

The party of fourteen or fifteen Americans who had gathered in front of the hotel had no thought of attempting the feat—then, at least. Some of them had already made the ascent; others intended to make it by and by. Just now they were resting and enjoying the tremendous panorama. All the morning they had tramped together, as indeed they had for several weeks. Luncheon was over, and in a little while they were to separate.

Some one started a song, a rollicking college lay, with a fair imitation of the Swiss yodel for the chorus. The others caught it up, and in a few minutes everyone was singing.

There were some good voices in the group, both among the men and among the women, and the pleasure of singing together was contagious. One selection followed another in quick order—the songs of several American colleges, negro melodies, church hymns, Scotch and English ballads.

At first the tone was gay and a little boisterous; but either the influence of the surroundings or of the singing itself, or the thought of the coming separation and the break in the pleasant summer friendships, began to exert a quieting effect. The songs gradually took on a sentimental quality—Annie Laurie, My Old Kentucky Home, then Auld Lang Syne.

When that was finished there was a little pause. Then a splendid baritone voice began:

"My country, 'tis of thee,
Sweet Land of Liberty,
Of thee I sing."

One by one the men in the party removed their hats, and both men and women took up the song. Before the first stanza was finished, a window in a front room of the second story of the hotel was slowly raised, and a white-haired old lady appeared. The noise of the grating window caused one of the singers to look up, and the face of the old lady fixed itself in his memory. It was the face of a woman of seventy or more, beautiful rather because of its refinement and tenderness of expression than because of regularity of feature. The woman was in deep mourning, and as she stood in the window, listening, her eyes were filled with tears, which rolled slowly down her cheeks.

The young people sang the song through. At the end, in the quiet that settled momentarily on the group, the door of the hotel opened and the old lady stepped out. She was evidently laboring under strong emotion. Her lips quivered and the tears still glistened in her eyes; but without hesitation she advanced to the group of young Americans and held out both hands to the girl who happened to be nearest. She spoke impulsively:

"I thank you! I thank you more than I can tell! I, too, am an American, but I haven't seen my native land or heard that song sung for more than forty years; and it means more to me than it can possibly mean to you."

"Dr. Smith, the author of that song, was our minister when I was a girl at home. He was a family friend, too, and when I was married it was he who performed the ceremony. My husband was an Englishman. He died here this summer. Of course I have heard the air of the song thousands of times; but with other words it never seemed the same to me."

"I am going home soon—home to America; and there, please God, I shall hear Americans sing that song as you have sung it here. When you are as old as I am, you will know what it means."

THE LIFE AND DEATH OF ARMY

AN officer in the Canadian forces, Maj. Edgar, now serving in Flanders, tells the following affecting story of a dog's love and fidelity. The dog was an Irish terrier, whose home with a French family was destroyed when the Germans came. He fled from the ruined house and the dead bodies of the people he had loved, and sought refuge with one of the British regiments. Here one of the kindly Tommies adopted him and named him Army. The kindly Tommy was killed subsequently, and the dog stationed himself, a lonely watcher, at his grave.

Other soldiers who came there found and cared for him; and when they were killed or had retired, still others became his guardians. He loved them all, but he never forgot his first loved friend and master, or failed to watch by his grave. He remained on guard all through the winter, and one morning he was found frozen to death there.

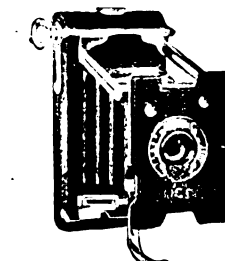

After Army had died, the authorities gave permission for him to be buried beside the master to whom he had been so faithful, and there in Flanders is the big grave with the little one beside it; and the dog's name as well as that of his master is inscribed upon the cross that marks their last earthly resting place.

The Sign of the AnSCO Dealer

Was Minnehaha pretty? We would know for sure if Hiawatha had carried an AnSCO Vest-Pocket No. 1. He would certainly have had it with him always, for it is the smallest and lightest camera made to take 2 1/4 x 3 1/4 pictures—a size that makes "jim-dandy" enlargements.

Just imagine how many interesting pictures you could take of your friends and your sports with the AnSCO V-P No. 1. It requires no focusing—gets on the job in the twinkle of an eye, and costs but \$8.00.

See it at the AnSCO dealer's, or write direct to us for a catalog.

ANSCO COMPANY

BINGHAMTON, NEW YORK

AnSCO Vest-Pocket No. 1. Equipped with single achromatic lens, \$8.00; with rapid rectilinear lens, \$9.50.

A slight pull on the camera front gets it ready to "snap."

Have flaky, tender pie crusts

Are your pie crusts so light, so tender and flaky that they fairly melt in your mouth?

If not, it is because you are using a shortening that is too soft. This makes the dough sticky, impossible to handle lightly, and the crust is tough. On the other hand shortening that is too stiff does not work smoothly into the flour. It forms tiny lumps and the crust is coarse and grainy.

You can get shortening that has exactly the right consistency. Swift's "Silverleaf" Brand Pure Lard makes a dough that works successfully and mixes into the flour with velvet smoothness.

With "Silverleaf" Brand Pure Lard you will be amazed to see how much more delicious your pies are. Your family will say they never before knew how delicate, how flaky, pie crusts could be!

Warranted 25 Years

Six Different Styles

We Pay the Freight

No better, more durable or more completely equipped machine can be purchased at any price than the high-grade

New Companion Sewing Machine

This fine machine is built "on honor" in one of the largest and oldest factories in the world devoted to the making of high-grade family sewing machines. Our high standard, maintained over more than a third of a century of successful business, has placed the New Companion among the leading sewing machines. It is so good that the Publishers of The Youth's Companion stand back of each machine with a twenty-five-year guarantee.

Test It Before Deciding. Our offer permits of a three months' trial in your home before you decide to keep the machine. If not satisfactory we will refund the entire purchase money and take back the machine at our expense.

Our Low Prices will surprise you. Our "factory-to-home" system saves you a large amount on the purchase of this high-grade machine. We also pay all freight charges to your nearest freight station.

How We Can Do This is told in our Illustrated Descriptive Booklet, sent free to any inquirer. Write for it to-day.

In view of a probable advance in prices we urge an early application for full particulars.

The Newest Style Portable Electric

The New Companion Portable Electric consists of a regulation, full-size sewing machine head, fitted with electric sewing motor. Will do exactly same work as any sewing machine and do it easier. Attaches to any light socket and will run as slow or as fast as you wish according to pressure on foot control. Has quartered oak base and carrying cover and is easily put away when sewing is finished.

We quote a surprisingly low price. Write to-day for descriptive circular.

Sewing Machine Dept.
Perry Mason Company
Boston, Mass.

The Portable Electric may be used on any table in the house or on the porch.

THE LITTLE FLAG AT MANILA

By Francis E. Clark, D.D.
President of the World's Christian Endeavor Union

ONE of the most precious of the possessions that I have accumulated in many years of travel is a little copy of Old Glory. Commercially, I suppose, it is not worth a penny; the bunting is cheap, and there is a big hole in two of the stripes. But it is precious to me, for it is the first American flag that floated from a flagstaff in the city of Manila after the occupation by the American fleet in 1898.

It was given me at a convention in Denver by Chaplain Robert E. Steele, formerly of the United States Navy. He told its story in a large tent in which ten thousand young men and women were packed, and then he unfurled it over their heads. The depths of their patriotism were stirred, and they cheered and cheered the little flag as if they would never stop.

It was first in the possession of Leonard Budrow, the coxswain of one of the cutters of the battleship Olympia, Admiral Dewey's flagship at Manila Bay.

"Young Budrow," said Chaplain Steele, "was a typical American bluejacket, with a high sense of honor, and as true to the code of ethics of the navy as any man who ever wore its uniform.

"I knew him intimately," said the chaplain, "and when I stood at his open grave in the Congressional Cemetery at Washington one bleak March morning in 1901 it was more than a shipmate whose body was laid away to await the resurrection; it was an honored friend. Nearly a year before his fatal illness and death he came to me one day with a little boat flag in his hand, and said:

"This is the first American flag hoisted at Cavite after the great fight. I was coxswain of one of the cutters of the Olympia, and my boat took ashore the party whose business it was to hoist the Stars and Stripes on the flagstaff at the Cavite Arsenal.

"You know how excited we were! Not a man in the fleet but walked on air. We had fought and won one of the great naval battles in history. Not a man had been lost, and our enemy was completely wiped out. We were intoxicated with the glory of it all. Officers and men alike were ready to cheer and yell at the slightest excuse. Under circumstances such as those, discipline was greatly relaxed, and we fellows did some things we would not have done otherwise.

"When we pulled up to the landing, and the flag party went ashore to the Plaza, I happened to glance up to the top of the great shears used for hoisting masts and heavy machinery. There, on the tiptop, was a little jack staff, with halyards all rove, just waiting for a flag. I could not resist the temptation. In the boat box I had a spare boat flag that belonged to me, and to get out the key, open the box and start up the shears was the work of a moment. The shears were provided with the usual rungs for climbing, and I was soon halfway to the top, running like a monkey.

"As I cleared the tops of the trees, I saw the flag party still on its way to the Plaza. I knew I could beat them. In a few minutes more I was on the little platform at the top, and had the flag bent on and hoisted. The boys in the boat below sent up a cheer that must have startled the other party. Just as I started down again, the band struck up The Star-Spangled Banner, and Old Glory began to rise majestically up the great flagstaff.

"Of course everyone stood at attention and faced the colors; but my fellows and I faced the little boat flag, and the salute we gave was to this little piece of bunting. It was the first American flag to float as a token of possession over the Philippines. I let it stay there a while on the little jack staff, and then took it down and have kept it ever since."

At the close of his address, and before the vociferous cheering that greeted the flag had died away, the chaplain turned and generously presented to me the historic piece of bunting. Do you wonder that I prize it as one of my chief treasures?

DRAMATIC SCULPTURE

THREE little boys were playing on the beach. One had piled and patted and cajoled the sand into a resemblance to a racing car, says the Post Magazine; another had constructed with fair success a touring car. But what the third little fellow had made was without form and void.

"What is your car?" one of the others asked him. He looked rather uncertain until the questioner continued: "Looks like two or three together."

"It is," he said loftily; "mine's a collision!"

A Scientist Dreamed of a Wheat Food

Prof. A. P. Anderson—then of Columbia University—dreamed of creating a perfect whole-wheat food.

That meant a food with every granule broken, so digestion would be easy and complete.

He conceived the idea of exploding each food cell. There are over 100 million in every wheat kernel. And the best cooking methods broke only part of them.

He did this by sealing the grains in guns. Then he applied a fearful heat, and changed the grain's moisture to steam. Then he shot the guns, and the steam exploded. And he found that every food cell was blasted.

That is how Puffed Wheat and Puffed Rice were invented. Whole grains, for the first time, were made wholly digestible. And he had created the ideal cereal foods.

Puffed Wheat

Puffed Rice

and Corn Puffs

Each 15c Except in Far West

Children Found That Food a Bubble-Like Confection

They found that Puffed Grains were airy, crisp and flaky, with a fascinating taste.

They tried them with cream and sugar, mixed them with their berries, floated them in their bowls of milk.

They used them in candy making, scattered them on their ice cream. They ate them like peanuts or pop corn, doused with melted butter.

Now these Puffed Grains are all-hour foods with millions. They are taking the place of part-grain foods, and often the place of sweetmeats.

It should be so in your home. The perfect food for children is these whole grains puffed.

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

MOSQUITOES AND FLIES

WE do not know what new enemies we may have to fight during the coming summer, but we are quite sure that we shall not fail to meet our old foes—mosquitoes, house flies, and all the usual insect pests. Inasmuch as it has been proved beyond all question that these insects are responsible for the spread of many dreaded diseases, we no longer have the excuse of ignorance if we allow them to multiply round us. In the tropical zones the mosquito carries yellow fever from one human being to another; in the temperate zone it carries malaria. Wherever men succeed in exterminating the insect these disorders die out.

The people of the more civilized parts of the world are paying much attention to this exterminating process and are spending large sums of money, with the result that in many localities the mosquito is becoming rare, much to the improvement of the general health, to say nothing of the general comfort. The worst of it is that a community of conscientious people is more or less at the mercy of their slack neighbors. It is discouraging to exterminate one's own pests only to have the wind drive a flock over from the next community. We must labor, therefore, to educate people morally as well as mentally in these matters and try to convince them that duty calls as clearly as self-interest.

The house fly is so notoriously unclean that the instincts of all good housekeepers are against him, irrespective of the question of health; but if all women were made to look at food through a microscope after flies had been on it, they would be still more particular. Investigators have proved by careful computation that one fly sometimes harbors more than a million bacteria.

The time to begin the fight against these horrors is the very early summer, when the first warm weather brings out the hibernating flies. Destroy each one ruthlessly then and there. Explain the danger of them clearly to children of every age, and show them a magnified picture of a house fly with the accumulated dirt on its legs. Preach aloud until everyone knows that flies spell typhoid fever, many other intestinal disorders, and especially the dysentery that carries off so many young children in the hot weather.

THE WAY PEGGY TALKED

PEGGY, too full of news and enthusiasm to stop even to toss off her wraps, perched upon an arm of the davenport and poured out a torrent of mingled information, interruptions and exclamations.

"If you could only have been there! It was the loveliest engagement luncheon I ever saw in my life. Eloise had on a *dream* of a gown with little pink rose—oh, you should see the pin her Aunt Rebecca sent her!—one that has been in the family since the ark—and she was wild with delight, of course, a sapphire set with pearls, and oh, her hair that new way is just bewitching—"

Kent, catching her sleeve, jerked her off the davenport. "Hold on, Peggy!" he cried, with simulated concern. "Let's get this straight. Was Eloise a sapphire set with pearls, or was it the pearl that had its hair curled, or—"

"You know perfectly well what I mean," Peggy declared, with an effort at dignity. "This isn't high school."

But the next second she forgot her dignity and was rushing on again into one of the labyrinthine mazes of conversation that only Peggy's intimates could successfully unravel. And, after all, Peggy was such a dear that it seemed a small thing to let her talk in her own eager way.

That evening, however, when her excitement had simmered down, Kent waylaid her.

"It's for a heart-to-heart talk, Peggy," he said, steering her into his den. "It's for your soul's good, you know."

"Yes, sir," Peggy replied demurely.

"I'll do it up in sugar, but the medicine is inside. You're such a peach of a girl, sis, that people like just to look at you and have you round. I have a sort of weakness that way myself, even if you are my sister. But there's one thing you've got to correct sooner or later, and it's easier to begin when you're young. That's the way you talk. I never heard such a jumble in my life. And it's going to bore people, Peggy."

"Why, Kent Packard! I'm perfectly clear always," Peggy retorted with the indignation of one unjustly accused.

"All right! Go ahead! I've warned you, that's all."

Peggy pulled his hair saucily. "Thank you for nothing!" she said, and vanished.

It was the next week that Miss Capron appeared. Miss Capron was a dressmaker highly recommended by a neighbor. Peggy, coming in the first afternoon, heard her talking:

"Yes'm, this certainly is a fine piece of silk. It ought to make a beaut—and with a high collar! They're all the style. There was a customer of mine and she vowed she never would have one, but I persuaded—and with this lace especially, and

you not being so tall—and you'd be surprised to see how well it would look—and if you pleased it just a little and wired—"

Peggy, on the stairs, giggled to herself. Then she suddenly stood still with a queer look in her eyes. When she went on again she was thinking hard.

"UP-YOU-GO-AND-THE-BEST-OF-LUCK"

THE hospital at X— is a comfortable place, and the men are in no hurry to leave there for the trenches, says Mr. Patrick MacGill in *The Great Push*. But when Col. Z— pronounces them fit they must hasten to the fighting line again. And about Col. Z—, or "Up-you-go-and-the-best-of-luck," as he is known to the rank and file of the B. E. F., Mr. MacGill tells the following characteristic story:

Five men, including Gilhooley, an Indian who fought in an English regiment, where he became notorious for his mad escapades, his dare-devil pranks and his wild fearlessness, appeared before the colonel.

"How do you feel?" the colonel asked the first man.

"Not well at all," was the answer. "I can't eat 'ardly nuffink."

"That's the sort of man required up there," Col. Z— answered. "So up you go and the best of luck."

"How far can you see?" the colonel asked the next man, who had complained that his eyesight was bad.

"Only about fifty yards," was the answer.

"Your regiment is in trenches scarcely twenty-five yards from the enemy," the colonel told him. "So up you go and the best of luck."

To the third soldier, who had been wounded, he said, "Off you go and find the man who wounded you"; and to the fourth man, who confessed that he had never killed a German, he gave this advice:

"You had better double up; it's time you hit one."

It came to Gilhooley's turn.

"How many men have you killed?" the colonel asked.

"In and out, about fifty," Gilhooley answered.

"Make it a hundred, then," said the colonel; "and up you go and the best of luck."

UNTYING THE RED TAPE

SINCE the chief requirement in a torpedo-boat destroyer is speed, speed, and yet more speed, it has always been the aim of naval constructors to keep the fittings of such vessels as light as is consistent with strength and to dispense with all fittings that are not absolutely necessary.

Sometime in the year 1904, says Lient. F. H. Roberts in the *Army and Navy Journal*, a flotilla of destroyers sailed from the Atlantic coast to the Philippines by way of the Mediterranean and the Suez Canal. It so happened that the commanding officer of one of the destroyers weighed about two hundred and thirty pounds. His two assistants, both of them ensigns, each weighed more than two hundred pounds. Out of a half dozen petty officers three were heavyweights, and in the crew were two or three others of the same size.

When the flotilla arrived in the Philippines the weather was hot and sultry, and the sun kept the steel deck of the vessel like a stove. The vessel's original allowance list had included one electric fan, and so the commanding officer immediately submitted a requisition asking that a fan be furnished for the wardroom and one in each compartment in which the crew were quartered, five fans in all.

The request in due time reached Washington, and some three months later was returned disapproved, since the bureau "did not wish to add any unnecessary weight to the vessel for fear of reducing its speed."

Nothing daunted, the commanding officer returned the requisition with a statement thereon of the weights of himself, his two commissioned assistants and other members of the crew, and requested that one or two of the heavyweights be transferred, and that a man weighing about one hundred and fifty pounds be assigned to his place, and further requested that the disapproval of his requisition be reconsidered. Needless to say, the fans were forthcoming and no one was transferred, not even the commanding officer!

ON THE SAFE SIDE

MANY years ago, says Surgeon Guthrie in *Seeing the World Through a Porthole*, a group of children were listening with great interest to the "yarns" of an old sailor who seemed to them a miracle of knowledge.

"In crossing the equator you either gain or lose a day," the story-teller declared.

One of the children appeared to him somewhat incredulous, whereupon the old man cleared his throat and added, "that is to say—sometimes."

Another old sailor who was being tried by court-martial had been so impressed with the instructions of the young officer detailed for his defense that he be extremely careful about qualifying evidence when he was not absolutely certain, said, when the Judge Advocate asked his name:

"My name is John McGraw—or words to that effect."

A KEEN OBSERVER

THE following dialogue, which took place when a Hungarian applied for naturalization papers, is reported in *Everybody's Magazine*:

"Who is President of the United States?"

"Meester Vilson."

"Who makes the laws?"

"De Kungress."

"Who elects the President?"

"California."

He got his papers.

AN UNEXPECTED ANSWER

THE kindergarten had been studying the wind all of the week—its power, effects, and so forth—until the subject had been pretty well exhausted. To stimulate interest, the teacher said, in her most enthusiastic manner:

"Children, as I came to school to-day in the trolley car the door opened and something came softly in and kissed me on the cheek. What do you think it was?"

And, according to Harper's Magazine, the children joyfully answered, "The conductor!"

Dayton Bicycles

A Dayton Bicycle bought in 1899 and still in use

In Service 17 Years!

THE young man in the photograph above is Karl H. Krueger, of Meadville, Pa., who wrote to the DAYTON factory, last December, as follows:

"My father got a DAYTON bicycle in 1899. I am riding the same wheel, and she is still running fine. We think that 17 years of constant riding of a wheel is a good test of whether or not a wheel is built right."

We believe you'll think so, too! Each DAYTON Bicycle is just as carefully built as the one which has gone from father to son in the Krueger family—and is "still going." It will pay you—as it has paid them—to buy a DAYTON. The name DAYTON on a bicycle stands for good service to DAYTON riders and good will from them. It has done so for more than twenty years!

Boys! Write to-day for our fascinating free booklet: "50 Ways to Make Money With a Bicycle." Ask for Booklet No. 12.

No. 00 CARTRIDGE PREMO

A genuine, daylight loading, roll film camera made in the Eastman Kodak Co. factories.

A camera that has been designed especially for the use of boys and girls, and made upon such a simple principle that you can easily make good pictures with it from the start.

Has automatic shutter to make either time or snap shot exposures, and is fitted with a first quality meniscus lens, carefully tested.

This is not a frail toy but a real camera, made to last for years, by the largest and most experienced camera makers in the world. The low price of seventy-five cents does not mean low quality, but is due to production in big quantities in perfectly organized factories. This camera makes $1\frac{1}{4} \times 1\frac{3}{4}$ pictures, and the film which it uses comes in six-exposure rolls for only ten cents per roll.

Ask the dealer or write us for a free copy of the Premo catalogue. It describes this and many other styles of cartridge, film pack, and plate Premos from 75 cents to \$2.00, and up.

NATURE & SCIENCE

RESEARCH AND INDUSTRY.—Dr. Raymond F. Bacon, who is director of the Mellon Institute of Industrial Research, believes Americans have only begun to understand what properly conducted research can do for industry. In an article in the *Scientific American*, Dr. Bacon says that the possibilities of new discoveries in almost every field of industrial endeavor are virtually limitless. Hundreds of men gifted with the genius for research could give their lives to investigation in the field of even a single industry and still not exhaust that field of its research opportunities. In fact research is in that respect different from ordinary business; the greater the number of researchers the greater is the progress in a given field. Every new discovery in manufacturing creates new problems, and the chances for discovery become continually greater as more is learned of the materials that enter into the arts and manufactures. Dr. Bacon cites some instances from the domain of iron and steel: "We see tremendous advances made in imparting new properties to those old metals (iron and steel) by means of mere traces of other metals. For example, it has been found that a mere trace of copper gives to steel the desirable property of resisting corrosion, while the addition in small amounts of vanadium or tungsten to steel affords a supersteel with certain physical properties far beyond those of any ordinary steel. We see the addition of magnesium giving to aluminum new properties of strength and casting quality, which immediately make this metal available in a large way for use in automobiles and aeroplanes. Such matters as these, where a metal has conferred upon it entirely novel properties and thereby enters an immense new field of usefulness, by the addition of very small amounts of some other metal or metals, belong in the field of those things that cannot be predicted by existing scientific theories. The only way such discoveries can be made is by patient and careful application of cut-and-try; and when one considers that the number of possible combinations runs literally into the hundreds of thousands, it will be seen how much work is open in this field alone."

MODERN ARMOR.—A writer in *La Nature* urges that soldiers at the front be supplied with body armor, in addition to the steel helmet that has proved so useful in preventing head

wounds. The writer says that nearly seventy-five per cent of the wounds received in trench warfare are caused by missiles of low velocity such as would be stopped by comparatively thin armor. Furthermore, missiles that have a velocity so low that it allows them to lodge in the body are more dangerous than swift projectiles that pass through the body, because every bullet or bit of shell is likely to be infected. The form of body armor that the writer proposes is shown herewith. It consists of a steel cuirass to cover the thorax and upper abdomen, and so to protect the most vital

organs; a gorget of chain mail to protect the neck, and a girdle or kilt of the same material for the loins and groin; a mask for the face, and protective pieces for the shoulders, the elbows and the knees. How far such armor would interfere with the free movements of the soldier is a matter yet to be determined, but it would certainly furnish protection. A soldier of average height, as he faces the enemy in open field, presents a target that has an area of twenty-seven hundred and forty square centimetres. Of that target the head and neck make up nine per cent, the thorax and abdomen twenty-eight per cent, and the less vital parts—the arms and legs—make up sixty-three per cent. Even if only the more vital parts could be protected there would be a great saving of life.

MARKETING STEAM.—In New York City not only are gas and electricity supplied through street mains from a central station but many of the new office buildings in the financial district now get their steam from underground pipes that relay it from a distant generating plant. The buildings, says the *Scientific American*, have no furnaces or boilers, but the basements have, instead, simple valve mechanisms for turning on steam from the high-pressure street mains, and meters that measure the volume of steam consumed. In that way the occupants of the building can have at any moment all the steam they need for heat and power, and pay only for what they really use. The plan has been so successful that one company has had to add a new power plant to its system in order to meet its rapidly growing business. The plant occupies four floors of a building one hundred and fifty feet high, which has six great smokestacks, twelve feet in diameter, that tower one hundred and seventy-five feet above the roof. It uses nine hundred tons of coal a day. Unless the cost of heating by electricity becomes very much less than it is now, most city residences may eventually get steam for heating from underground pipes, and get it at a great saving in comparison with the present cost of fuel and labor.

Keep Them on the Sideboard For Cheerfulness — and Health

TEMPT every member of the family with this constant, bountiful supply of sweet, juicy, cooling Sunkist Oranges.

The orange is world-famous for its healthfulness. Sunkist Oranges, because they ripen in California every day the year 'round,

can be purchased fresh all summer from any dealer.

NATURE'S germ-proof package—the orange skin—protects the goodness and insures the healthfulness.

DON'T say merely "oranges" when you order—state plainly that you want Sunkist.

200 Recipes and Suggestions By Alice Bradley

Miss Alice Bradley, principal of Miss Farmer's School of Cookery, Boston, Mass., has written 200 recipes and suggestions for the use of Sunkist Oranges and Lemons. A beautifully illustrated book, which will be sent free to any housewife, tell all about them. Send a post card for your free copy now.

"Oranges
for
Health"

RECALL that golden day when you first read "Huck Finn"? How your mother said, "For goodness' sake, stop laughing aloud over that book. You sound so silly." But you couldn't stop laughing.

To-day when you read "Huckleberry Finn" you will not laugh so much. You will chuckle often, but you will also want to weep. The deep humanity of it—the pathos, that you never saw, as a boy, will appeal to you now. You were too busy laughing to notice the limpid purity of the master's style.

MARK TWAIN

When Mark Twain first wrote "Huckleberry Finn" this land was swept with a gale of laughter. When he wrote "The Innocents Abroad" even Europe laughed at it itself. But one day there appeared a new book from his pen, so spiritual, so true, so lofty, that those who did not know him well were amazed. "Joan of Arc" was the work of a poet—a historian—a seer. Mark Twain was all of these. His was not the light laughter of a moment's fun, but the whimsical humor that made the tragedy of life more bearable.

The Price Goes Up

This is Mark Twain's own set. This is the set he wanted in the home of each of those who love him. Because he asked it, Harper's have worked to make a perfect set at half price. Before the war we had a contract price for paper so we could sell this set of Mark Twain at half price.

A Real American

Mark Twain was a steamboat pilot. He was a searcher for gold in the far west. He was a printer. He worked bitterly hard. All this without a glimmer of the great destiny that lay before him.

Then, with the opening of the great wide West, his genius bloomed.

His fame spread through the nation. It flew to the ends of the earth, until his work was translated into strange tongues. From then on, the path of fame lay straight to the high places. At the height of his fame he lost all his money. He was heavily in debt, but though 60 years old, he started afresh and paid every cent. It was the last heroic touch that drew him close to the hearts of his countrymen.

The world has asked is there an American literature? Mark Twain is the answer. He is the heart, the spirit of America. From his poor and struggling boyhood to his glorious, splendid old age, he remained as simple, as democratic as the plainest of our forefathers.

He was, of all Americans, the most American. Free in soul, and dreaming of high things—brave in the face of trouble—and always ready to laugh. That was Mark Twain.

Send the Coupon Without Money

The last of the edition is in sight. The price of paper has gone up.

There never again will be any more Mark Twain at the present price. Get the 25 volumes now, while you can.

Every American has got to have a set of Mark Twain in his home. Get yours now and save money.

Your children want Mark Twain. You want him. Send this coupon today—now—while you are looking at it.

Send me, all charges prepaid, Mark Twain's works in twenty-five volumes, illustrated, bound in handsome green cloth, stamped in gold, gold tops and decorated edges. If not satisfactory, I will return them at your expense. Otherwise I will send you \$1.00 within five days and \$2.00 a month for 12 months, thus getting the benefit of your half-price sale. Y.C., 6,14,'17.

HARPER & BROTHERS, NEW YORK

AN ASTONISHING FRIENDSHIP

IN Mr. W. H. Hudson's interesting book, *Adventures Among Birds*, there is a story so remarkable that it would seem almost beyond belief were it not vouched for by the author, and by several other persons who were witnesses. It happened, says Mr. Hudson, at Little Chelmsford Hall, near Chelmsford, where Lady Pennefather and her friend, Miss Guinness, reside.

Near the house is an artificial lake of considerable size, fed by a stream that flows into the grounds on one side and out at the other. Lake and stream are stocked with trout. Three or four years ago a pair of swans, kept on the lake, reared a single young one, which after some months, when it was fully grown, they began to persecute. The young swan, however, could not endure to be alone, and, although driven furiously off to a distance a hundred times a day, it would still return. Eventually, however, the old birds punished it so mercilessly that it went away to the farther end of the lake and made that part its home.

About that time Miss Guinness began to make some water-color sketches at that end of the lake, and her presence filled the swan with happiness. Whenever she appeared, it would swim rapidly toward her, leave the water and follow her about until she sat down to do a sketch, whereupon it would settle itself by her side and stay contentedly with her until she went back to the house. The swan continued its strange behavior for five or six weeks—until Miss Guinness finished her sketching and went away on a visit.

Again the poor bird was miserable until a man was sent to work in the shrubbery by the lake. At once the swan made a companion of him; each morning it would come from the lake to meet him, and would spend the whole day in his company. In due time the man finished the work and went away. Once more the swan was miserable, but all at once there was a change in its behavior; it was no longer waiting and watching for a visitor to the lakeside. It now appeared quite content to be alone, and would rest on the water at the same spot for an hour at a time.

A little later the reason of this change appeared when the extraordinary discovery was made that the swan was not alone after all, that it had a friend that was constantly with it—a large trout! The fish had its place at the side of the bird, just below the surface, and together they would rest and together move like one being. Those who first saw it could hardly credit the evidence of their own senses, but in a short time they became convinced that those two ill-assorted beings had actually become companions.

The swan was plainly miserable when alone, and consequently it was ready to attach itself to any living creature on land or in the water. Perhaps the trout got some profit out of the partnership; it is not unlikely that the swan when feeding by the margin accidentally provided the trout with food by shaking small insects into the water.

The sequel remains to be told. There came to the hall a visitor from London, who, being a keen angler, got up very early in the morning and went to the lake to get a trout for breakfast. About eight o'clock he returned and proudly exhibited to his hostess a magnificent trout that he had caught. He had not looked for such a large one, and he would never forget catching this particular trout for another reason. A wonderful thing had happened when he hooked it. One of the swans was there on the water, and followed the fish up when it was hooked. When he drew it to land the swan came out and dashed at and attacked him with the greatest fury. He had a good deal of trouble to beat it off!

"Oh, what a pity!" cried the lady. "You have killed the poor swan's friend!"

From that time the swan was more unhappy than ever; the sight of it became actually painful to its owners, and by and by, hearing of an acquaintance in another part of the country who wanted a swan, they sent it to him.

HIS EYE AND TONGUE

"I DON'T know when he is most terrifying," a nervous young officer once complained of Lord Kitchener, "when he looks and says nothing at all, or when he doesn't seem to notice, and you think everything's going off all right, and then all of a sudden he whips out his tongue and runs you through with it!"

Both the eye and tongue of Kitchener of Khartum, England's great soldier so tragically lost with the Hampshire, were indeed terrible weapons when directed at either the inefficient or the self-sufficient. Around a personality so striking as that of "K. of K." so many stories gather that it is difficult to distinguish fact from fable; but indeed fable is often scarcely less illustrative of the fundamental truth than fact. The ruthlessness of Kitchener's sarcasm has probably been exaggerated; its effectiveness has not.

It is not certain, although it is widely believed, that during the Boer War he "squashed" the self-importance of an ineffective leader of a column after the following manner. The officer had several slight engagements with the enemy, and after each wired optimistically to his chief, that "during the action a number of Boers were seen to fall from their saddles." Kitchener became annoyed, and received no more similar messages after he had politely telegraphed:

"I hope when the Boers fell they did not hurt themselves."

But there is little doubt, in view of his intolerance of "pull" and favoritism, that he really sent another and more neatly sarcastic telegram. A nobleman, whose son was serving in the yeomanry, desired the youth's presence at home, for a wedding, ball or some other important festal event. Counting on his rank and social importance, he ventured to telegraph the commander:

"Please allow my son return at once; urgent family reasons."

Kitchener replied promptly:

"Son cannot return at all; urgent military reasons."

In another instance popularly narrated, the snub was administered to the presumptuous noble by word of mouth. A subaltern of exalted family had been sent out to join his staff in Africa, and made the mistake of remembering his social and forgetting his military rank. He made the amazing error of addressing his chief as "Kitchener."

The other officers were aghast, and looked for a quick and stern reproof. Instead, "K. of K." drawled nonchalantly:

"Oh, why be so beastly formal with me? Why don't you call me Herbert?"

To insure Victor quality, always look for the famous trademark, "His Master's Voice." It is on all genuine products of the Victor Talking Machine Company.

Victor Supremacy means—the greatest music by the greatest artists

It is indeed a wonderful thing to have the greatest artists of all the world sing and play for you right in your own home.

The instrument that accomplishes this inevitably stands supreme among musical instruments.

And that instrument is the Victrola.

The greatest artists make records for the Victrola exclusively. They agree that only the Victrola can bring to you their art and personality with unerring truth.

The Victrola is the logical instrument for your home.

There are Victors and Victrolas in great variety of styles from \$10 to \$400, and there are Victor dealers everywhere who will gladly demonstrate them and play any music you wish to hear.

Victor Talking Machine Co., Camden, N. J., U.S.A.
Berliner Gramophone Co., Montreal, Canadian Distributors

Important Notice. Victor Records and Victor Machines are scientifically coordinated and synchronized by our special processes of manufacture, and their use, one with the other, is absolutely essential to a perfect Victor reproduction.

New Victor Records demonstrated at all dealers on the 28th of each month

"Victrola" is the Registered Trade-mark of the Victor Talking Machine Company designating the products of this Company only.

Warning: The use of the word *Victrola* upon or in the promotion or sale of any other Talking Machine or Phonograph products is misleading and illegal.

Victrola XVII, \$250
Victrola XVII, electric, \$300

Do You Know How Peanuts Grow?

PERHAPS you have thought they grow on bushes or trees like other nuts.

No! They grow in the ground, just like potatoes.

The peanut plant is pulled up by the roots when the right time comes, and there are the peanuts, hanging to it.

All the peanuts used in making Beech-Nut Peanut Butter go through wonderful machines that clean off every speck of sand or earth. That is why Beech-Nut Peanut Butter is always so smooth, and spreads on bread so nicely.

TELL US WHAT YOU HAVE FOUND OUT

Most boys and girls love Beech-Nut Peanut Butter on bread, toast or crackers. If you have discovered some other new ways that you like to eat it, write us a letter. We will be glad to hear from you.

If you have never tasted *Beech-Nut* Peanut Butter, ask your mother to get you a jar today.

BEECH-NUT PACKING COMPANY, CANAJOHARIE, NEW YORK

Beech-Nut Peanut Butter

Hartford Tennis Racket

We offer the latest oval model, with low cut, white holly throat, and shoulders reinforced with dogwood. The style is particularly popular for its large playing surface. The Racket is strung with a good quality of Oriental gut, with extra stringing in the central portion. 12½ to 14 oz. Give weight when ordering.

OUR OFFER

Send us one new subscription (not your own) for *The Youth's Companion* with \$1.20 extra and we will send you postpaid the Hartford Tennis Racket; or the Racket will be sold for \$2.75, postpaid.

NOTE: This Tennis Racket is offered only to present Companion subscribers (not to agents) to pay them for introducing the paper into homes where it has not been taken the past year.

OUR BIG PREMIUM LIST, sent free to any Companion subscriber, describes hundreds of attractive Premiums. Write for it to-day.

IN AUNT STELLA'S POCKET

By William Thomas Whitlock
In Eight Chapters. Chapter One

Davis & Hills, Lawyers, Boston, Massachusetts.

Dear Sirs. Your letter received. In reply will say that I positively refuse to allow you to send the children to me. Of course you did not ask me outright to take them, but I know that is what you meant. My brother John and his wife had no right to bring five brats into the world. In fact, there was no sense in John's marrying at all. I wanted him to come West with me, get hold of some land and amount to something. But no, he would marry a little doll-faced factory girl and go to work in the woolen mills himself.

John never wrote me a line, although he must have known that I was struggling along out here trying to improve my land and prepare a home for my old days. His wife didn't even notify me when her husband died. I had to learn by accident in a newspaper about my own brother's funeral. And now comes your letter saying that she is dead, too, and has left five children unprovided for.

Well, all I have to say is, there used to be orphan asylums for such cases. I've lived on this place alone for ten years; cleared and leveled most of the land myself; dug the irrigation ditches with my own hands; and until the last few years tended my crops and looked after my stock. I've just got to where I can take things a little easier. And if you think I'm going to begin slaving all over again to keep those children in victuals and clothes, you are very much mistaken in
Yours truly,
Miss Stella Jones.

P. S. Since driving down here to Digville to mail this letter I've changed my mind. Inclosed please find draft to cover the cost of five railway tickets; the youngest of them ought to come half fare. It is money I was saving to buy cows with this fall.

Children are scarcer out here in Wyoming, and people seem to think more of them than they used to back East. Perhaps I can find homes for them where they will be appreciated. I do not like to think of my own flesh and blood becoming objects of public charity.

Please send my nephews and nieces out at once, so that I can get to work to find places for them.
Stella J.

P. P. S. Inclosed is another draft. It is part of my alfalfa money that I always deposit in the bank. Those children will have to eat on the way out here; and I don't suppose they have any decent clothing. You have some woman see to it that they are real well dressed. I won't have them come off the train looking like beggar's brats. It might turn people against them and prevent their getting good homes.
S. J.

P. S. No. 3. I want you should sew a tag on each one of those children, giving their names and ages in plain letters. They probably won't know themselves, and folks who want to adopt them will ask that first thing. If there is any money left over after their meals and clothes are paid for, you might buy some dolls and toys to amuse them on the trip. I don't want them to get here all crossed in their temper. It might spoil their chances of getting homes with the right kind of people. If there is not enough money for the toys, draw on me at the Digville National Bank. It will be a long, tiresome journey for the little folks.
Their Aunt,
Stella Jones.

MR. DAVIS laid the letter on the table and removed his glasses. He glanced inquiringly toward his partner.

"That is the most heathenish epistle I ever read!" cried the junior member of the firm. "We must try to find homes for those poor children here. Think of five helpless orphan 'brats' thrown on the mercy of an old termagant like that!"

The senior member balanced his glasses once more across his nose, took up the letter and reread it carefully.

"On mature consideration," said he, with his blue eyes twinkling, "I believe that we can safely intrust the care of her nieces and nephews to Miss Stella Jones."

Mr. Hills opened his lips to protest. Then

his eyes lighted on the drafts that lay on the table. "Whew! Miss Jones must be rich. She has sent much more than is necessary."

"No. Rich people seldom send more than is necessary, especially to poor relations. By the way, I'd like a hand in selecting those toys."

"Very well. I'll ask my wife to see to the clothing—if you really think we should send the children out to their aunt."

"I haven't the least doubt that that is the best place for them," said Mr. Davis, and his eyes twinkled again. "I'll trust Miss Jones."

Stella Jones climbed down from the narrow-bedded, strongly built spring wagon and carefully tied a white-eyed mustang team to a telegraph pole. Then she walked with brisk, masculine strides toward the dusty-red railway station that stood broiling in the afternoon sun.

There was something in the untrammelled, self-reliant movements of Miss Jones that corresponded agreeably with the rugged mountain scenery that surrounded the little mining town

of Digville. The sure-footed gait, the resolute swing of her body, the square shoulders, told of vigorous exercise in the open air.

As she neared the station, Miss Jones frowned. The narrow cinder platform was dotted with groups of curious inhabitants of the village. The telegraph operator had casually announced that the Limited would stop that day in Digville; and apparently all of the townspeople who could spare the time had gathered at the station, eager to see who would descend from that wonderful and exclusive train. The Limited usually shot through Digville at a speed of forty miles an hour.

Realizing that she must greet her nephews

and nieces under the eyes of that gaping throng, Miss Stella's frown deepened. And when at last the whistle of the locomotive echoed among the foothills, a small panic seized her.

It seemed that at least half the passengers of the Limited had decided to alight at Digville. Some, however, contented themselves with thrusting their heads from the windows; others crowded the vestibules. But it was evident that all who could manage to do so meant to climb down to the platform and take an active part in the proceedings.

Three young men and two young women importantly escorted five wonder-eyed children down the steps of the car. A lady with large diamond earrings carried an armful of toys; her maid and the negro porter followed with suit cases and an assortment of lunch baskets. The newsboy brought forth sundry boxes of bonbons and bags of nuts.

The conductor, who looked rather harassed, brusquely cleared a circle in the crowd. Holding an envelope in his hand, he glanced anxiously about as he called in a loud voice: "Miss Stella Jones!"

Eying the passengers with grim disfavor, Miss Jones walked slowly forward. She quailed slightly at the publicity thrust upon her, and not until the conductor had again called her name did she speak.

"I'm Stella Jones," she said, and stared defiantly back at the many pairs of eyes that immediately fixed themselves upon her.

"They have been the best children," effusively began one of the young ladies.

"Really don't know what we should have done without them!" cried the other.

"That youngest boy is a corker!" said a young man who looked like a drummer.

"There's your Aunt Stella, dears! Run and kiss auntie!" cried the woman with the diamonds.

"None of that foolishness!" snapped Aunt Stella, as the children advanced timidly toward her. "Line up here in a row, and let me read your tags."

With the aid of the overzealous passengers, the children were arranged in a short flight of stair steps facing their aunt. They stared at her in blank silence. This was not the Aunt Stella that their imaginations had pictured. That lady was small and pretty and yellow-haired, as mamma had been; and she would take them in her arms and cry over them, as the lawyer's wife who had put them on the train in Boston had done. This woman was tall and strong-looking, with a brown face and dark hair. She wore a cowboy hat, a black silk shirt waist, a short corduroy skirt, leather leggings and heavy shoes; but she had nice eyes, large, dark blue—or were they black?

"All a-board!" said the conductor, breaking the tense silence.

There was a gasp of protest. "Just a moment!" begged one of the young men. "We can't miss this, you know."

"Say, Miss Jones!" called a stout man from the vestibule. "If you think five of them too many, I'll take the two little girls. My wife wants —"

Aunt Stella closed her lips firmly and gave the speaker a steady stare.

"All aboard!" shouted the conductor. "The Limited is six minutes late now!"

The woman with the diamonds pressed

AUNT STELLA
STRUGGLED WITH
THE TERRIFIED
PONIES

forward to Stella's side. "Here is my card," she said hurriedly. "If—if you find—if you ever—if Elizabeth should ever want a home, please write to me."

Stella ignored her outstretched hand, and the card fluttered to the ground. With her eyes still wistfully upon the children, the woman climbed reluctantly up the steps of the car.

One of the young women paused in the vestibule to search for her handkerchief. "I can't bear to leave those darlings with—that woman!" she sobbed. "She hasn't even kissed them yet!"

As the train began to move, the observation platform in the rear was crowded, and each car had the appearance of a turtle with many heads thrust from its steel shell. There was much fluttering of handkerchiefs and a chorus of farewells to the children. Stella Jones folded her arms and remained motionless until a curve in the track whisked the Limited out of sight.

"Now that that bunch of busybodies are gone perhaps I can have your attention for a bit," said she, calmly indifferent to the groups of staring townspeople gathered about her.

"John Jones, aged fourteen years," she read from the tag attached to the tallest step in the row. "Humph! Sensible name, anyway. Suppose your father christened you. You look just like him, too."

"Elizabeth Jones, aged twelve." That's sensible, also, if they don't call you Lizzie or Bess. Guess you're like your mother. You didn't get that yaller hair and those Chiny blue eyes from the Joneses.

"Clarissa Jones, aged eight—Malissa Jones, aged eight." Twins! And as much alike as two antelope calves. Both Joneses, too, which means they'll be terrors to manage. And such names! John's doll-faced wife must 'a' got 'em out of a novel.

"Thomas Wentworth Jones, aged four." The idea of saddling a little mite like you with all that! I'll call you Tommy until you're older."

She eyed the children gravely for a time. Suddenly she stooped and gave Thomas Wentworth a hasty peck on the chin. Then, ascending the "stairs," she awkwardly kissed each child in turn, although she hesitated slightly over John, aged fourteen.

A tall, broad-shouldered man with a Mexican sombrero, high-topped boots and jingling spurs forced his way through the crowd and stood smiling quizzically upon the group. The children evidently approved of him and his Western attire; with one accord they returned his smile and, forsaking their aunt, gave him their absorbed and flattering attention.

"Howdy!" said the tall cowboy. "Going to have company?"

"What are you doing here?" asked Aunt Stella in a low, sharp tone.

"Oh, I just happened round!"

"You're always happening round. Help me get these things to the wagon," she commanded, indicating the suit cases and lunch baskets.

"Is you Uncle—Uncle Stella?" asked Thomas Wentworth Jones, and then paused aghast at the effect of his innocent question. There was a smothered laugh from the crowd, the cattleman jumped as if he had been shot, and Aunt Stella's face turned a dull brick red. Tommy took shelter under Elizabeth's arm.

Aunt Stella faced the smiling spectators. "These are my nephews and nieces," she said. "Their parents are dead. I've brought them out here to find homes for them. If any of you know of families who want to adopt a boy or girl, please send me word."

"Old Mat Masters wants a girl to raise," said the station agent, glancing at Elizabeth.

"And Uncle Davy and Aunt Louisy Jackson are just pinin' for a child of some kind, since their youngest girl got married and moved to Helena," said a woman. "You might drive past their place on your way home."

"I'm not peddling them round like potatoes yet," said Aunt Stella. "But you might tell Aunt Louisa for me, Mrs. Wilkins."

The tall man had carried the suit cases to the spring wagon. When he had seen the children seated in the bed of the vehicle among the luggage, he turned to Aunt Stella.

"I'd better ride down to-morrow and see how you are coming along," he said.

"You'll do nothing of the kind," said Aunt Stella ungraciously. "I don't know anything about children, and until I get used to them a bit I won't have you round laughing at me."

"Oh, all right! Good-by, boys and girls!" "Good-by, Mr.—Mr.—" cried the children in animated concert.

"His name is Jeff Kitner. He owns the Three Steps Ranch," said their aunt. "He calls himself one of my neighbors. His place is twenty miles from my Pocket."

As the wagon jolted along the trail that wound in long curves over the foothills and round the base of a mountain, the children gazed silently upon the strange surroundings. The tall, forbidding peaks in the distance, the rock-strewn valleys and gulches, the tiny, arid mesas, presented a dreary outlook. John's face settled into sober lines. Elizabeth bravely winked back tears of homesickness. The novelty of the railway journey had in a measure

relieved the grief that the children felt over the death of their mother; but now they were orphans in a strange land. And this queer Aunt Stella, sitting upright on the seat in front—

"Tommy want go back on twain where nice ladies is!" said Thomas Wentworth in loud, rebellious tones.

"Hush!" gasped Elizabeth, smothering his face against her arm.

Clarissa toppled over on her back and kicked up her heels. "She said he lived twenty miles from her pocket!" she exclaimed mirthfully.

"Twenty miles from her pocket!" shrieked Malissa, also kicking up her heels.

"Good land! What is so funny about that?" cried Aunt Stella, glancing over her shoulder.

"They don't know what you mean by a pocket," interposed John hastily, and then informed his sisters, "A pocket's a hole in the ground where you find gold."

"Such ignorance!" said Aunt Stella. "But you can't expect children raised back East to know anything. You wait till we get there, and I'll show you what a pocket is."

The twins sobered instantly. Their aunt's speech seemed to hold a threat. They stealthily moved closer to Elizabeth. A mile farther on Thomas Wentworth again broke forth.

"Aunt Stella cross!" he shouted petulantly. "Her say nasty t'ings to man wiv boots."

Tommy like boots wiv jingle-jingles on 'em. Tommy not like ladies wiv leather t'ings on legs." He avoided Elizabeth's arm. "Tommy like pretty ladies wiv soft dwesses—on twain."

"Young man, you come up here on the seat with me," said his aunt, halting the ponies abruptly and unconsciously holding the whip high in her hand.

Tommy replied to this invitation with a gasp of fear and then a loud wail. The twins cowered down among the suit cases.

"Heavens! I believe he's afraid of me,"

"I LIKE TO SEE A BIT OF BRIGHT COLOR IN A ROOM"

said Aunt Stella. "Come along, baby. I'll let you hold the whip."

Thomas reluctantly let her lift him up to a place beside her. A few moments later he was shouting gleefully and lashing the half-tamed mustangs into a furious gallop. Aunt Stella struggled with the terrified ponies.

"John! Elizabeth! Tell him to stop!" she cried, winding the reins about her wrists and bracing her feet against the dashboard. "I'm afraid to speak to him for fear he'll cry again."

John dragged the protesting Tommy down into the wagon bed, and Aunt Stella at last managed to settle the white-eyed mustangs into a sweeping trot. Now and then she glanced back over her shoulder at Thomas Wentworth.

"I've got to get rid of that Tommy first of all!" she muttered. "I simply couldn't trust myself to bring up a baby."

As the sun slipped down behind the distant western range and the long mountain twilight set in, the twins and Tommy cuddled themselves against Elizabeth and lapsed into slumber. Even John was nodding wearily when the wagon clattered noisily up a steep ascent and came upon a semicircular, flat strip of ground surrounded on three sides by almost perpendicular walls of stone. This fertile oasis in a barren land was known far and wide as Stella's Pocket.

Aunt Stella gave a sigh of relief as she drove into her dooryard and halted the ponies beside the veranda of her house.

"You children climb out and sit right down on the front steps while I put up this team," she said. "And don't you move, any of you, until I come back. Don't you strike any matches—or try to get into the house—or eat anything—while I'm gone," she cautioned, trying to remember some of the vagaries of children in general.

Five serious-faced orphans sat in the dusk waiting for her to return. A whippoorwill called mournfully from a tall cedar. A forlorn cat mewed plaintively somewhere in the rear of the house. On the north, east and west of the little plateau rose the frowning mountains like imprisoning walls. To the south the trail dropped circuitously away to Digville, where only a few hours ago a whole carful of solicitous

men and women had bidden them farewell. The Limited, with its wonderful sleeping berths, dining car and observation parlor, had whizzed on westward, bearing away forever the delightful, newly made friends. The kind old lawyer with the twinkling blue eyes,

the jolly young lawyer and his thoughtful wife, were back in Boston. The little cottage near the mills that they had known as home was in Boston, too; and Boston was a long way from Aunt Stella's Pocket.

TO BE CONTINUED.

ELLA'S ENDLESS YARN

By Alice Louise Lee

WITH her last winter's velvet hat perched above a happy face, and with five dollars in her handbag, Ella Day started downtown at one o'clock. She expected to return before dinner time with an empty handbag and a new hat above a still happier face. Her family did not share her confidence. They had known Ella for sixteen years.

"If she can get past the bargain counters!" said her sister Louise darkly. "Mother, you ought not to have let her go downtown alone."

"Ella must learn," returned her mother. Fifteen minutes before dinner was served, the learner came flying into the apartment in a state of dishevelment that showed a battle with the wind. Her last winter's velvet hat was blown over one ear. Her hair was blown over her face. Her round cheeks were blown full of color.

"Such a bargain!" she cried, laying a fat bundle on the table and casting her muff on the couch. "I brought this skein along to show you. I got it at the fire sale in Steen's."

Her last winter's hat followed the muff, and after it went her gloves. Then from the fat bundle she drew forth a bulky skein of scarlet yarn. "Now, what do you think of that for only five cents? It was formerly twenty-five!"

"Five cents!" cried Louise, pouncing on it. "Five cents for yarn of that quality? Why, Ella, this goes ahead of Cousin Eunice herself, and she's a champion bargain hunter!"

"I thought you'd all own up this time that I haven't been cheated," Ella said, glowing with pride. "And isn't it pretty and warm-looking?"

Fingering the big soft threads, Louise nodded. "It's really zephyr, isn't it, mother?" she asked, and without waiting for a reply turned on Ella with a disconcerting question: "What are you going to use it for?"

A shadow dimmed the radiance of Ella's face. "Why—ee—you use yarn for so many things," she said vaguely, "and the clerk said that wool is going up fast, and I—thought it would be fine to have a supply on hand when I could get it for almost nothing."

Mrs. Day glanced at the last winter's hat. Then she picked up Ella's handbag and looked inside. "Ella," she asked, "how much did you buy?"

The shadow on Ella's face deepened. "I had to take all they had in order to get it for five cents," she said defensively. "The clerk threw in a dozen skeins even at that price because I had only the five dollars."

The scarlet yarn oozed through Louise's fingers and fell to the floor. "A dozen thrown in!" she cried shrilly. "Ella Livingston Day, how many skeins did you buy?"

"One hundred and twelve," declared Ella's mother in a tone that was appallingly quiet. Louise gasped. Mr. Day looked out from behind his newspaper. Harry Day ceased to torture the piano. Ella slowly picked up the yarn and laid it on the table. Her cheeks began to rival it in color.

"Isn't one hundred and twelve times as much as that quite a lot of yarn?" asked Mr. Day mildly. He took up the skein to look at it.

"But it—it was so cheap," said Ella, "and wool is going up. The clerk said that it was."

"WOOL IS SO CHEAP," ELLA DOTH PEEP

Harry gave a sudden shout of laughter and, whirling round on the piano stool, improvised noisily:

"Wool is so cheap,
Ella doth peep.
"Let it rise at a leap
Now I have some to keep."

With a mute appeal for comfort, Ella turned toward the doorway, where John Day was standing, still in his topcoat. Her older brother was usually her refuge, but now he failed her.

"Gee whiz!" he exclaimed. "One hundred and twelve bundles like that! Is it to be stored in safety deposit vaults or at a warehouse?"

The following morning Ella found the yarn twisted and laid at her place on the breakfast table. On top was a rime in a familiar scrawl:

Ella had a little wool,
Its color was not snow;
And everywhere that Ella went
The wool was sure to go!

"You think you're smart, don't you!" she exclaimed indignantly, looking at Harry.

Harry grinned. "Not when I compare myself with you, sis! When do your bargain wool bales begin to arrive?"

Unfortunately, they arrived just before six o'clock, as the family were assembling for dinner. They came in three immense bundles, which the delivery man carried upstairs on his head. When he had dumped them into the hall no one could pass. By alternately pulling and pushing them, Ella got them with difficulty through the doorway into her little room. She left them in the middle of the floor, or, rather, occupying all of the floor space available. Her last winter's hat lay on the bed. It seemed to have grown shabbier during the last twenty-four hours.

At the dinner table the subject of yarn was served from soup to dessert.

"What do you make out of it?" asked John, honestly trying to help his younger sister.

She controlled her voice with an effort, and answered with dignity: "It will make lovely afghans for the couches." That was the only use that as yet she had been able to invent for the yarn.

"We have three afghans already and only two couches," said Mrs. Day gently.

"And scarlet would put out the eye of the apartment," Louise added. "It wouldn't fit in anywhere here."

"I—I'm sure the y-yarn will work in somewhere," Ella stammered.

"It will, indeed!" declared Harry, with conviction. "I've noticed a lot of unoccupied space in your room, and this bargain of yours will work nicely into that space!"

After dinner Ella retired to her room and by putting one of the bundles on the bed managed to close the door. Then, sitting on the edge of the bed, with her back planted against one bundle and her feet on another, she wept a little in sympathy for herself. At last, feeling refreshed by her tears and comforted by her own sympathy, she considered ways and means of temporarily disposing of her bargain. Of its permanent disposal she dared not think.

While Harry, at the piano, was singing lustily, "A bargain for sis is never amiss," she was tightening the cords of the bundles to reduce their bulk. That done, she shoved and

SHE SHOVED AND SQUEEZED AND PUSHED

IS AMERICAN HIGHER EDUCATION IMPROVING?

Nicholas Murray Butler

WE can say that higher education is improving only if the quality of its product is being steadily heightened, and if it is steadily adapting itself to the newer needs of the community. We must at once admit that American higher education lacks some of the very useful and helpful characteristics that it had a generation ago. It lacks, for example, the admirable discipline that a student gets from close occupation, under strict surveillance, with a few difficult subjects of study. No educational instruments have yet been found that, in disciplinary value and in capacity to train a powerful and subtle mind, are equal to Greek, Latin and mathematics. The descriptive and the experimental sciences cannot do it,—or at least they have not done it,—and the same is true of the newer subjects of study that are humorously, if roughly, classified together as the “unnatural sciences”—economics, sociology and the like.

GREEK, LATIN AND MATHEMATICS

THROUGH long centuries of educational use Greek, Latin and mathematics have acquired an educational form that gives them the qualities of a highly tempered and highly polished tool. It may be that the descriptive and the experimental sciences, and the so-called “unnatural sciences” as well, will one day acquire the same attributes. It suffices for the present argument to take note of the fact that as yet they have not done so.

The use of Greek, Latin and mathematics in the higher education of America is declining. In a few years it will be as rare for a student to know Greek as to-day it is for him to know Hebrew; and it will not take more than a generation or two for Latin to follow the same course. How long the higher reaches of mathematics—those noble and inviting reaches in which philosophy, poetry and imagination combine to play with the intricacies of space and the notations of time—will continue to find extensive educational use is also a question.

The belief that mathematics will always be pursued for its practical value is groundless. The modern architect, and even the modern engineer, hires his mathematician and no longer deigns to know the subject himself. Counting machines and various similar mechanisms are invading the province of the four fundamental rules. It is plain that some stronger reason than practicality will have to be found for the general study of mathematics a generation hence.

It becomes, therefore, a very serious question what the educational instrumentalities shall be that are to provide the next generation or two with the sort of discipline and training that Greek, Latin and mathematics provided for our fathers and for many of us. The vague discussion of what are called social questions will not discipline or train anyone. If history be regarded as something quite independent of chronology and as recording merely the results of the operation of economic law, then it, too, will become of little or no educational value. Those who empty out of philosophy its ancient and honorable content, and try to substitute for it a sort of checkered pavement of the sciences, are engaged in agile exercise, but they are not accomplishing any good either for philosophy or for education.

It must be said, therefore, that the higher education of the United States is at present in a condition where it may readily drop backward rather than improve. The college student of to-day, and in some cases even the university student, is permitted to sprawl over so large and so varied an area of intellectual interest that he loses the discipline in

concentration, in hard work and in the mastery of some relatively small field that comes from pursuing a better and older method. There is just now, however, a marked tendency among the better colleges to aid and to guide the student toward concentrating his interests and his energies upon a small group of subjects that have some common centre of interest and some well-marked relationship.

This movement is a sound and hopeful one, and should be encouraged and aided.

The student should follow the group of subjects that he chooses far enough to carry him beyond their mere elements. No mind can be called really trained or educated that has never got beyond the elements of anything. It is necessary for many of us to remain satisfied with a knowledge of the elements of most things, but there should be some small part of the field of knowledge in which we have gone far past the elements and have gained some notion of what the higher reaches of the subject contain.

It may be said that, from the standpoint of the quality of its product, higher education in the United States is improving wherever sound and satisfactory progress is making to put into the place of the disappearing Greek, Latin and mathematics some educational material that is sufficiently well organized and long enough pursued to give training in concentration, in application and in genuine knowledge.

There is marked improvement, too, in the manner in which our higher education is adapting itself to the needs and aspirations of the people. The colleges, and particularly the universities, are outgrowing the worship of some of their ancient fetishes. All sorts of subjects that were once frowned upon are now found worthy of study and of investigation.

Moreover, an institution of higher education no longer considers it to be proper to lock up its buildings, its libraries and its laboratories from June to September. The summer session, which began as an exotic, has been academically acclimated, and is now that part of the academic year in which, at more institutions than one, the very best work is done.

EXTENSION TEACHING

THE same is true of what is known as extension teaching, which began as a system of more or less popular lectures to untrained audiences, and in some places still remains so. Where extension teaching is best developed, however, it means something quite different. In such cases it is genuine work of the same quality and quantity as that given in the so-called regular classes, but carried on at such hours and in such places that those who have to earn their living

can attend. Wherever the same standards of admission and examination are required, extension teaching is just as good as any other kind of teaching, and will be merged sooner or later in the so-called regular work.

The problem of vocational training is not so hard in the field of higher education as it is in that of secondary education. In higher education it is easy to indicate what the aim and the standard of vocational training should be. The best universities agree that not less than two years of work in a college of liberal arts and sciences is the minimum that will give the maturity and accomplishment necessary for admission to a really first-class school of law, medicine, engineering, architecture or teaching. If the student is able to pursue an even longer college course, so much the better, provided he makes thoroughly good use of his rare advantage and opportunity.

In training in law, in medicine, in engineering, in architecture and in teaching, higher education in the United States is improving by leaps and bounds. That is the case not only because the best professional schools have enforced a higher standard of admission, but because there has grown up in the United States a competent body of trained scholars in the various professions who are distinct from the successful practitioners.

Practical knowledge and experience are, of course, of great value to a teacher in a vocational or professional school; but mere

practical knowledge and experience, without scholarship, originality, power to conduct and to stimulate research, and skill in teaching, will no longer suffice. A young American who knows how to choose and who takes full advantage of his choice can now obtain at least as good a professional education in the United States as he can anywhere else in the world, and in some subjects a better one than he can anywhere else.

The two or three best American schools of law have no equals in Europe. Our best schools of medicine have no superiors in Europe, although there are three or four European cities that have better chances for clinical observation and study than any cities in this country. Our three or four best schools of engineering, if not so good as the best in France, Germany and Italy, certainly press them very hard indeed. The best American schools of architecture, although organized on a sounder and broader basis than any of the European schools, cannot yet rival in prestige and in influence the *École des Beaux Arts* in Paris. The best American school of education is in a class quite by itself, and at a half dozen universities schools of similar type are rapidly coming forward to take places in the front rank.

There is a mistaken notion that scholarly

research is more esteemed and more eagerly pursued on the continent of Europe than in the United States. That was true until a decade or two ago. At present, however, the scholarly investigation going forward in America equals in amount and in quality that which is going forward in any other country.

The quality of the American college and university professor is in some respects not so good as it was a generation ago, but in other respects it is much better. Forty years ago you could count on the fingers of one hand those Americans who had made an international reputation of any sort for scholarly endeavor; to-day the number of such Americans is very considerable. The price that has been paid for that gain, calculated in terms of personality, of breadth of view, of deep human sympathy and of genuine wisdom, has been rather high. It is my own belief that this phenomenon is, however, purely temporary.

Too many American college and university teachers of to-day are proselytizers for some particular philosophy of life. They are not content to teach, but feel under the obligation to preach as well. To the discriminating student such preaching of social and political doctrine does little harm, because he takes it only at its proper value. The less discriminating student, however, and particularly the women students of to-day, are sadly imposed upon by lecture-room talk of that sort.

The good teacher understands the distinction between what he himself knows and believes and what it is wise and proper for him to teach the young and immature student. The poor teacher, on the other hand, mixes all those things up together.

HIGHER EDUCATION IMPROVING

MOREOVER, the college and university teacher suffers from lack of criticism and supervision. I do not mean that sort of criticism and supervision which would be appropriate in a factory or in a counting house, but that criticism and supervision which, particularly at the outset of an academic career, can do so much to guide, to strengthen and to develop a teacher's powers and effectiveness. Our public-school systems abound in illustrations of the supervision that I have in mind, but in the colleges and universities nothing of the kind exists. A more or less vague notion prevails that Mr. So-and-So is a good teacher or a poor teacher, as the case may be, and that notion is based largely on what his students say about him. His own immediate colleagues base their judgment of him, not upon what he does in the classroom, for they have no knowledge of that, but upon his personal characteristics, his published work and his general reputation for scholarship. It is for those reasons that a man may be a most admirable scholar, and yet a wretched teacher of the young, without that fact being pointed out to him or even discovered through a long academic career.

It may fairly be said, therefore, that, in spite of the obvious grounds of criticism, higher education is improving in the United States. The fact is, we expect more of higher education than ever before in the history of the world. Our American democracy is impatient to meet its needs, and to meet them quickly is no easy matter. The problem before those who are charged with the care and oversight of American higher education is to preserve its standards and its ideals while meeting to the full the demands of a new and increasingly complicated economic and social life.

squeezed and pushed until she managed to get them partly under her bed, which served as a couch by day.

There they remained for two weeks except on the mornings given over to cleaning in the Day household. During those trying hours they were unwelcome wanderers. The first time that Hannah cleaned Ella's room, the owner of the bundles pried them from under her bed and put them into the hall. Mrs. Day remonstrated against their presence there, since they prevented her from reaching either the telephone or the outer door. Therefore, the next time that the mop invaded their resting place, Ella put them into the living room. That called forth a remonstrance from Louise, who came in with two of her friends.

On the next cleaning day Ella moved the unwieldy bundles into the kitchen. Unfortunately, Hannah, rushing from the front of the apartment to stir a dish of boiling rice, found her progress momentarily impeded by the bargain in wool, and during that moment the rice burned. Hannah protested vigorously. After that, Ella decided to clean her own room, and to clean round the hundred and twelve skeins of yarn. By thus removing the fateful bargain from the family eye she thought that she might be able to remove it from the family memory.

The plan worked. Everyone seemed to forget the one hundred and twelve skeins of wool except Ella herself. The ends of the bundles under her bed constantly reminded her. The ends protruded several inches, so that when she transformed the bed into a couch in the morning the pale blue cover bulged outward awkwardly. That annoyed the girl, for she took great pride in her room. It was furnished in pale blue and white, and when she kept her last winter's hat in the wardrobe there was nothing shabby in sight except the covers on the couch by day; and those her father's cousin, Eunice Day, had promised to replace with new ones on Ella's seventeenth birthday, only a month away. Then there would be only one thing in the room not to Ella's liking, and perhaps by that time she would have found some use for the yarn.

For the present, however, it was a relief to have the interest of the family centred elsewhere. Her mother and Louise became so absorbed in a church luncheon that when Cousin Eunice called they forgot to tell her about the yarn—even when she produced a brass candlestick that she had bought at a bargain on Fourteenth Street.

“I've wanted one for years,” she sighed,

gloating over her treasure, “and to think that I could pick this up at a bargain!”

The word fell on Ella's ears with an odious sound. She held her breath lest it should remind Louise of the scarlet yarn; but Louise was so full of the subject of the church luncheon that she did not notice.

“We are giving the luncheon to help Esad Israel, an Armenian over on Third Avenue,” she explained. “He attends our mission, and the poor fellow is saving money to bring his family from Armenia. He has a tiny shop at 605. We buy all our notions of him. I wish, Cousin Eunice, you'd buy such things there, too, and speak about him to your friends.”

“I'll go over when next I want notions,” responded Cousin Eunice earnestly.

As she started to go, Cousin Eunice, gazing at her brass candlestick, said abstractedly, “Let's see—Ella, your birthday is the twenty-sixth, isn't it?”

Ella scarcely heard her. The conversation had thrown light on an already brilliant subject—the scarlet yarn. When John returned home that evening she took him into her confidence, and related to him a plan of which he heartily approved.

“Ella, you've hit it! It's the very thing! Esad will rain blessings on your head.”

Thus encouraged, Ella allowed the light of her idea to shine on the rest of the Days, and all approved, especially Harry; he almost forgot to tease.

“Great idea, sis!” he cried. “If Esad Israel can pull his family out of Armenia by a thread of scarlet yarn, your life will not have been lived in vain!”

Nor did Harry's approval end in words. He got a boy to carry the yarn to Esad's store, and he escorted his sister to the place and helped her to explain to the Armenian that the yarn was a gift to help stock his bare little shop. Ella likewise explained that the price of the yarn was formerly twenty-five cents a skein. Bowing profoundly, Esad followed them out of the shop, repeating gratefully over and over:

“Thank-you-much-oblige-thank-you-much-oblige!”

The following morning was dedicated to cleaning in the Day apartment, and with a sigh of thankfulness Ella arranged her bed into a smooth couch and allowed Hannah to take possession of the room, while she went out to walk in her last winter's hat and almost forgot its shabbiness.

Thereafter the days fled swiftly and pleasantly until the dawn of the twenty-sixth

brought her seventeenth birthday. Ella wakened early and was the first one in the dining room. As usual, her gifts lay awaiting her on the breakfast table. From her father, mother and Louise were some pretty toilet articles for her room; but from her brothers—from Harry, the tease, as well as from John, the staid and helpful—there was money for a hat.

After breakfast she arranged the toilet articles happily, and then confidently removed the shabby covers from her sofa pillows. The hat money she laid aside until such time as she could counsel carefully with her mother and Louise; they were, at present, on the eve of the church luncheon.

Cousin Eunice and the pillow covers arrived before dinner that evening. She came in gayly, dropped a package into Ella's lap and, after kissing her on the forehead, sat down and smiled complacently.

Eagerly Ella tore off the wrappings and held up to view—an emotional view—three cushion covers crocheted from scarlet yarn!

Cousin Eunice leaned back easily. "I like to see a bit of bright color in a room."

Ella choked. Louise choked. Harry and John stared, dazed, at the scarlet covers. Mrs. Day came to the rescue.

"What beautiful yarn, Eunice!" she said calmly. "Where did you get it?"

"I'll confess," explained Eunice. "You remember you asked me to go round to that

Esad Israel's for my notions? Well, I went there a week ago and found this yarn—I haven't seen any old-fashioned zephyr of such a quality as this in a long while. And so cheap! I must tell you its price. It was only thirty cents a skein, and wool is so high now!"

With his eyes bulging from his trying to suppress his laughter, Harry left the room. Louise followed him bearing a glass of water, ostensibly for his aid and comfort, but not only her hand but her sides shook. John managed to stay at his post. At first Ella sat and stared at her sofa-cushion covers with a wild look in her eyes, but as she began to falter out appropriate thanks, a smile came to her lips. And before she had said half a dozen words she was striving hard to keep from laughing. "They're lovely!" she cried. "I like them a lot. They're scarlet—and they're yarn—and they don't take up much room—I mean —"

"I knew you'd be pleased with 'em," said Cousin Eunice, with a satisfied nod. "Things crocheted from yarns are so fashionable now. I got all that Esad had left."

When Cousin Eunice had gone, Harry made a dash for the piano, and relieved his feelings with his absurd jingle:

"Ella had a little wool,
It's color was not snow;
And everywhere that Ella went
The wool was sure to go!"

THE PLATTSBURGERS

By Arthur Stanwood Pier
In Ten Chapters Chapter Ten

THE week that followed was one of arduous mornings, restful afternoons and dreamy and romantic nights. The marching and fighting were usually at an end by one or two o'clock; then there would be the encampment near a stream, and after luncheon bathing and lounging until supper time. One day there was no opportunity for a bath, and the dusty, grimy regiment was full of grumblers. The next day they felt better, for they camped near the Big Chazy River, which at that point was a natural bathtub, with a bottom of smooth slabs of rock, over which the water flowed at a depth of about a foot. The water was warm, the day was sunny and hot; and the regiment stripped to a man and basked for hours that afternoon in the shallow stream. It was the river that inspired the B Company song, which thereafter was to be heard at frequent intervals on the march:

Oh, there's A Compane
And there's E Compane
And there's C Compane and G Compane;
But B Compane
Is the best compane
That ever
Crossed over
The Big "Chazee."

Various were the military efforts and achievements of the mornings. There were skirmishes of outposts, deployments through swamps and thickets, marches under artillery fire, scouting expeditions through woods and over hills, defenses of hastily organized positions against attack—all more or less incidental to the day's march, in which the regiment would cover on an average about ten miles. The big battle occurred at Rouses Point, almost at the Canadian line; the regulars, representing the enemy, occupied imaginary intrenchments on the heights; the attacking force was prodigal of blank ammunition and achieved the final victory by a valiant bayonet charge.

"I like battles much better than target practice," observed Bradford afterwards. "I can fire my rifle off as much as I want to, and no one ever waves a red flag in front of me."

Ted always enjoyed marching through a town. Many of the houses were decorated with flags, and nearly all the people would turn out to give the regiment a welcome. In one town, during a halt, Meade and Gray and two others rendered what they called a barber-shop harmony, to the great delight of the citizens.

The boys were never too tired to sing; at the end of the day's march, when their throats were dry and their noses filled with dust, some one would always strike up a song, and the company would join in and go swinging on to the camping place to a chant of jubilation. One morning, when they had broken camp and were marching along the road in silence, they passed a detachment of regulars. Ted heard one of these say, "Why don't you sing, boys?" And before there was any reply from the ranks, another regular said, with a pleasant and approving smile, "Oh, they only sing when they're tired!" Ted felt proud to belong to an organization that had so impressed real soldiers.

On the afternoon of the last day but one the company held a competitive squad drill, as the final exercise before the award of the prize cups should be made. The members of other companies stood about and looked on while squad after squad went through the manual of

arms, did "squads right" and "squads left" and "squads right about," deployed and assembled. And that evening Capt. Hughes called the company together and, with eight silver cups placed on the ground before him, made a little speech.

"These cups have just been sent out from Plattsburg," he said, "and I think we'll award them now. I guess they'll travel safely in the squad bag of the winners. It's been hard to pick out the winners, because all the squads have been good; there's not a poor one in the lot. I'm tremendously pleased with the way you fellows have taken hold—tremendously pleased with the way the corporals have taken hold. I think that Squad 16, though it doesn't win the prize, deserves honorable mention for its excellence in shooting."

There was applause from the whole company at that.

"Squad 16 wasn't quite up to some other squads in other respects, though," continued Capt. Hughes, "and besides, there is a special reason why I couldn't give the prize to Squad 16, even though I thought it deserved it; I'll come to that in a moment. Corp. Romney's squad, Squad 3, in the opinion of both Lieut. Wharton and myself, is the best drilled of all; and if the members of that squad will come forward in order as their names are called, they will receive their prizes. I have asked the donor of the cups to hand them over personally to the winners; and although his diffidence caused him to object, I exercised my military prerogative, and he will execute my commands. He is a member of Squad 16, which is one reason why that squad couldn't get better than honorable mention. Mr. Ripley, gentlemen, is the benefactor, and will now step forward."

Ted obeyed orders, blushing and embarrassed by the applause that greeted him. The first sergeant read the names of the winners and Ted handed out the cups. When the ceremony was over, he was seized upon by the astonished members of his own squad.

"You're a deep one!" said Gray. "I never suspected you were the philanthropist."

"How did you get the big idea?" asked Bradford.

"I thought I'd like to do something for the company, and I felt sure I couldn't do much as a soldier. So I just thought of this. I didn't mean to let it get known, though. The captain sprung that on me; it was a low trick."

"Why, of course you ought to have the credit of it!" said Stevens.

Later that evening, when they had turned in for the night, Greiner said the thing that pleased Ted the most.

"That was a public-spirited thing for you to do, Ripley. And when I think of the way I cursed you out for being clumsy and spoiling the squad's chances for the prize,—your own prize,—I—"

"Never mind—forget it," Ted answered.

"There are several things I'd forget if I could."

"Well," remarked Ted, after a moment's silence, "I don't think about them. And no one else knows."

It was the next morning, while the company was resting by the roadside, that Gray said to Ted:

"One of the funny things about this hike is the way you and Greiner have got chummy."

"It is sort of unexpected," Ted answered.

"Tenting with him, I find he's not such a bad fellow. He has his good points, after all."

"I haven't minded him half so much lately myself," Gray said. "Being a corporal seemed to go to his head; as soon as he threw up that job, he seemed to be all right. Funny thing."

"Yes," Ted agreed. "Quite a funny thing."

On the last night of the march, after supper the regiment assembled and, seated in a semi-circle on the slope of a meadow, listened to a

that some military men might be influenced by such considerations. I don't believe that many would be. You must have observed during your short experience that an officer's first care is for his men. Few officers of my acquaintance, I might almost say none, outgrow this feeling of personal interest and friendship and affection for the men of their commands; and for that reason alone few officers, I believe, would ever welcome an

opportunity that might mean glory for themselves, but would certainly mean death and suffering for many of their subordinates. This is a point of view, a humanity of feeling, that is not always attributed to the military man; but I believe it to be absolutely characteristic of the officers of the United States Army.

"Now, I will say just one more word about my profession. It is regarded by some people as an unproductive profession, a wasteful life for a man of good abilities, a study in destructiveness instead of in creativeness. It may be that the world may attain sometime to a stage of civilization, of moral perfection, at which such a conception of the soldier's function and career will be true. I heartily hope so; but I shall not live to see it, and I don't believe that any of you men, young as you are, will live to see it. When cities are able to do away with police because crime no longer exists, nations may be able to do away with the military."

"But it isn't only as a passive, potential force for defense that the military exists. There are in all parts of the world works of peace that are best carried through—perhaps can only be carried through—by military organization. After all, the police in our cities aren't always occupied in hunting down criminals. They're helping women and children to cross crowded streets in safety; they're restoring lost babies to their mothers; they regulate the moving of traffic;

they keep the streets and sidewalks clear for the comfort and convenience of the public. This work of the police finds a close analogy in the work of the military. It's through the coöperation of the military with the civil branch of the government that many things get done—that the yellow fever has been stamped out, that the Panama Canal has been built, that the Philippines have been set in order. If there's any great disaster, an earthquake or a great fire, the military helps to deal with it promptly and efficiently and aids in distributing relief.

"Well, I hadn't meant to talk to you so long in defense of my profession. I believe, anyway, that, if those of our friends who disbelieve in soldiers would only come up here and see the kind of training that you boys have had and see the way you've taken it, they'd be sending their own sons to take the training next year."

"And now, gentlemen, I want to thank you for the spirit you have shown and for your endeavor to make this camp the success that it has been."

The morning came when the members of Company B shouldered their packs and their rifles for the last time. It was a Sunday morning in August, with a hot sun already eying them, when at nine o'clock the regiment, dusty, perspiring, but happy, struck the macadam road in the suburbs of Plattsburg. Company B, in the lead, swung along at route step, shouting out its arrogant song, to which none of the other companies had seemed able to devise an adequate rejoinder.

Then, just before the regiment turned into the main street of Plattsburg, came the command, "Company, attention!" and the singing ceased, the men fell at once into step and the rifles were all shifted to the right shoulder. The next moment the band of the Plattsburg post, which had joined the command a few moments before, struck up a march; and then, heads up, each man following the man in front of him, with eyes to the front, the column marched through the city. Flags decorated the houses, the people were all out on the sidewalks, and from little groups came bursts of clapping as the boys passed.

DRAWN BY NORMAN ROCKWELL

TED OBEYED ORDERS, BLUSHING AND EMBARRASSED

They turned into the parade ground of the Plattsburg post, and there the general and his staff on horseback were drawn up to review them. "Squads right—halt! Right dress!" came the order. "Attention! March!" And then, in column of companies, the regiment advanced down the parade ground, every man bent on doing his part to keep the alignment straight, every man watching anxiously for the moment when it should be, "Eyes right!" as a salute to the general. The moment came for Company B—just a passing glimpse of the stalwart, straight figure motionless on his horse, and then eyes to the front again and once more that intense preoccupation with the question how not to wobble when you walk. "Company B, squads right!" And then, when that command had been executed, "Route step!" and the strain was at an end.

They entered the camp ground singing the company song, were formed in line in the company street, and received the last instructions about disposing of their equipment. Then Capt. Hughes expressed his appreciation of the work of his command and for the last time addressed to it the welcome word, "Dismissed!"

"Isn't it great to be done with it!" exclaimed Bradford to Ted as they turned to go into tent 28. "It's been a mighty good time, but I'm ready for a change."

"So am I. I don't want to put on the forty-pound pack for another year, anyway."

"I don't quite see myself volunteering for this next camp that begins day after tomorrow," continued Bradford. "I guess there will be mighty few that will do that."

"I haven't heard of any one. Oh, I suppose there will be some enthusiasts! But I'm done for this summer."

It was a busy morning that the boys spent, turning in their equipment, getting their belongings together and making arrangements for departure in the afternoon. They went for a last swim in the lake and then put on their civilian clothes for the first time in four weeks. Up and down the company street, and indeed all through the camp, fellows were bidding one another good-by and promising to meet in the same place in a year.

Gray and Stevens and Bradford were sitting in the tent watching Ted pack his bag and giving him advice; they were all packed and waiting for the wagon to come.

"Where are Carton and Greiner?" Stevens asked.

"I saw Carton a while ago on his way to the lake," said Gray. "I haven't seen Greiner since we got back to camp this morning."

Neither, it appeared, had anyone else seen him.

"I hate to leave without saying good-by to him," said Stevens.

"So do I," said Gray. "The old corp has been all right this last week. I'd like to show him there's no hard feeling."

"Carton, too," said Bradford. "He's been quite genial ever since the hike started." He turned to Ted. "I thought at first those two were fair samples of Brampton men, but you always seemed different."

"Well," Ted answered, "one of the good things about this camp is that it shows a Brampton man that Thorpe men and Crane men can be just as decent fellows as Brampton men."

"I suppose that's a compliment," said Gray. "Well, I hope we all meet again some time."

"Sure we will," declared Stevens. "We're all coming back next year, aren't we?"

It appeared to be the unanimous opinion that they were.

"It won't be quite the same, though," remarked Gray. "We'll all be sergeants and lieutenants and things."

"That's an awful thought," replied Bradford.

Adams and Howland appeared from the tent across the street to say good-by. They, too, inquired about Greiner and Carton, and were disappointed not to see them.

"You'd better wait a few moments and go down to the station with us," said Stevens. "We have a wagon coming, and there will be room enough in it for your trunks. I'll go out and see if I can't find those fellows."

He came back in a few moments to announce that they were returning together from the lake. Carton was dressed, ready for departure from the camp, but Greiner was still in khaki.

"We were just wondering about you fellows; we were afraid we'd have to go without seeing you," said Stevens. "When are you leaving?"

"I'm going down on the train this afternoon," said Carton.

"I'm not going," Greiner said. "I'm staying over for the next camp."

"Great Scott! Haven't you had enough of carrying that heavy pack for a while?" asked Gray.

"I've decided to stay on. I haven't learned so much as I might."

"Neither have I," said Gray, "but I'm not so ambitious for knowledge. You've certainly got good nerve, Greiner."

"By George, you have!" exclaimed Stevens. "A month of this life is interesting and good

fun, but a month at a time is enough. I hope they'll make you a sergeant, anyway."

"I hope they'll make me a corporal," said Greiner, "and that I'll feel fit to hold the job."

The wagon rattled up outside, and the fellows carried out their bags and trunks and heaved them aboard. Then the wagon drove away, and the boys turned to say good-by to Greiner.

"I'll see you aboard the car," Greiner said, and he walked with them out to the road and waited with them until the trolley car came in sight. Then he shook hands with each of them

in turn—with Ted last of all. It was a hearty grip that he gave Ted's hand, and he murmured to him, so that none of the others heard, "Good-by! You're all right, Ripley."

"So are you," Ted answered. From the car he and Gray glanced back and saw the figure in khaki slowly reëntering the camp ground.

"Sort of forlorn, to be left behind that way," Gray said.

"Yes," Ted answered. And then, after a moment, he added, "Well, if he's ever needed, he'll be all the better officer because of it."

THE END.

TRAPPED IN THE SEA CHAMBER

By George C. Lane

IT was as tranquil a morning in March as Lem Longley had ever seen. As he rowed out in his dory on the ebb slack to Sea Chamber Ledge, the sea stretched smooth before him. Even the gentle surge of the ground swell was lacking. Seaward there was the yellow haze that often accompanies an unseasonably warm day in late winter.

East of the bay at Kirkport a mile of almost perpendicular granite ledge rises abruptly from the water to a height of forty feet. At one point the ebb tide leaves exposed a deep gash in the face of the ledge, wide enough to admit a boy.

Sea Chamber Ledge Lem had named the place. Although he always returned from it with a well-filled pail of the largest mussels, his real purpose in visiting the cave was to explore the darkened floor and ceiling of the stone chamber that ran back from the opening for about thirty feet. The sea mosses and the shells that he always found there interested him.

Stepping out on the six-foot shelf of rock that formed the protruding floor of the chamber, Lem hauled up his boat. It was his first visit to the cave since the preceding fall. Standing on the weed-covered shelf in front of the crevice, he stopped a moment to look up at the dripping, glistening ledge above him.

At that point it was really more like a very steep hill of rock than a cliff. Lem could have climbed it—but not now. The surface of it was covered with a layer of ice and snow several inches thick, which was melting now in the warm sun. The water dripped from the upper lip of the opening to the shelf beneath, and in

dark. The boy wondered for a moment whether he had gone blind, and then the truth dawned upon him. There had been a snowslide from the ledge above!

Beyond a doubt that was what had happened, Lem decided. Loosened by the warm sun, the whole layer of ice and snow that had covered the ledge from high-water mark to the edge of the woods above had slid down into the water!

Some of the slide had been caught by the six-foot shelf of rock outside the chamber. The mouth of the cave was blocked by a wall of snow and ice. How thick it was Lem, of course, did not know.

He started to go in what he believed to be the direction of the mouth of the chamber, but to his surprise found his progress stopped almost at once. He took off his gloves and passed his bare hand over the obstruction, which proved to be a wall of the cave. Somehow he had crawled to one side instead of straight toward the mouth. He started on again, and a moment later his hands encountered another part of the ledge. A feeling of uneasiness came over him. He had not thought

BUT THE HOLE WAS
VIRTUALLY ON A
LEVEL WITH
THE SEA

it possible to lose all sense of direction in a space only thirty feet square. The darkness was impenetrable.

Realizing that there was no time to lose, he started again immediately; he must get out somehow before the tide rose much higher. At last he reached the icy barrier at the mouth of the cave. He put on his gloves and began at once to pull away the snow. Working steadily, he threw large double handfuls to one

side, but the more he dug the harder the stuff seemed packed. Frequently he came on sharp-edged little cakes of ice. He had no idea how much progress he was making, for it was as black as ever before him. The fingers of his gloves wore through, and his fingers began to bleed from handling the sharp edges of ice.

For a moment he stopped, tired and a little discouraged. He seemed to be making almost no headway. Presently it occurred to him that he might as well rest and wait—that the surge of the sea would soon break up the barrier of ice and snow. The rising tide, he reflected, would accomplish more in a minute than he could in an hour.

As he crouched there, waiting, with his hands in his pockets, he began to wonder how long he had been imprisoned. He had no idea how much time had passed, but he thought that the surge of the tide must soon reach the

protruding floor of the chamber. The utter darkness and quiet were oppressive. He tried to assure himself that he was not afraid, but in spite of his efforts he became more and more nervous. Presently a feeling of coldness about his knees as he crouched on the floor of the chamber caused him to reach downward. To his surprise his hand went into icy water, wrist-deep.

There was only one way in which he could account for the water. The tide must already have begun to cover the shelf of rock outside and was seeping through the wall of snow. He had not felt the water before because, as he knelt there, his hip boots had kept his knees dry. And then, in a flash, he realized that he could expect no help from the tide!

He remembered now how still the sea had been when he had rowed out from the bay. There was no surf, no swell, to help batter down his prison wall. Probably the pile of snow and ice that covered the mouth of the cave would remain in place long after the chamber itself had filled with water!

Horried at the thought of being trapped there, Lem began digging again with a furious strength. His gloves, worn to tatters, no longer protected his bleeding hands; but although it was torture to him each time he dug into the barrier of packed snow and icy crust, he worked without rest, for he could feel the water now, pressing against his bootlegs, and he knew that it was rising fast.

After a while he had to stop; the strength had left his hands entirely, and he felt unable to get out another handful. If there were only something that he could use for a shovel! The pail! Yes, that was it; he must have the pail.

Realizing that there was not a second to lose, he hurried back through the water. Luck was with him this time, he told himself, when his feet struck against the pail a moment later.

Feeling his way carefully, he succeeded in getting back to the snow barrier without losing much time, but the pail proved to be an awkward implement at best. After he had dug in a little way with it he could hardly use it at all. So, with some trouble, he ripped off the rusted bottom, and bent it twice. Now he had a fairly sharp-edged, scoop-like tool.

Once more he resumed digging. It was still slow, hard work; but he was getting ahead faster than before. Meanwhile he was aware that the water was rising steadily. As he knelt there, it came over his boot tops. Horrified, he realized that he could not work much longer.

In spite of his aching hands and wrists he dared not stop for an instant—every second was precious. Presently with a thrill of joy he noticed a faint glimmer of light in front of him. He dug away feverishly, and the light spot in the hole grew stronger. A few minutes later he was looking out on a patch of water that was as smooth as glass. But the hole that he had broken through was virtually on a level with the surface of the sea; indeed here and there water had already washed into his little tunnel. The hole was not yet nearly large enough to let him through. He must work fast, for this was a race with the tide.

Digging mostly at the sides and top of the little tunnel, and shoving the snow out through the hole in front, he labored furiously. The floor of the passage was already awash, and Lem feared that at any minute the tunnel would cave in. At last he decided that the hole was large enough to let his shoulders through; in any event, he dared not wait any longer.

Feet first, he squirmed outward on his stomach, pushing himself along a few inches at a time with hands and elbows. His feet and legs reached the water. Inch by inch he forced himself out through the narrow opening. His shoulders scraped the sides. He pushed with all his strength, but seemed unable to gain an inch more; he was held as if in a vise.

The tide had risen still higher. He was barely able now to keep his face above it. Beyond the barrier he could feel the awful chill of the sea water about his hips and waist. Another foot or so and he would be free of the grip that held him. So near as this and yet to fail! The thought maddened him.

He ceased his frantic efforts for a moment to recover his breath; then, gathering every ounce of strength in him, he shoved outward. On the instant a great roar and splash filled his ears and he was carried down—down, in a deluge of ice and snow. But even in the awful rush that bore him down he realized what had happened. There had been another slide of snow from the ledge above and it had freed him, carrying him below the surface with it.

Instinctively he began to stroke upward through the ice and the slush at the foot of the ledge and at last reached the surface. He looked round for a place where he might pull himself out. Swimming along as well as he could through the slushy water, he managed at last to get a foothold on a part of the sloping ledge beyond the fissure.

The dory was nowhere in sight. Lem thought that it had probably filled with snow and been carried away by the tide. In spite of the pain in his bleeding hands he succeeded in climbing to the top of the ledge, and from there he made his way home. Two days later word came to him that a lobster man had found his water-logged dory floating near the ledges and that he had towed it into Kirkport.

GEN. EDWARDS INSPECTS THE HARVARD REGIMENT

FACT AND COMMENT

HE that is too old to intrench, let him retrench.

Each Heart should have its little Secret Bin,
But only Wholesome Things should lie therein.

CAN you look a potato in the eye and say,
"I have done my duty"?

BOYS who scoff at girl athletes may perhaps be more discreet after they have tried to beat the standing hop, step and jump of twenty feet and eleven inches that a Philadelphia girl made last month.

THE new Russian loan, like the American war-bond issue, is officially known as "the Liberty Loan." The amount is three billion rubles—or about \$1,545,000,000. The bonds, which bear interest at five per cent, were sold at eighty-five per cent of their nominal value.

BEFORE the Battle of the Wilderness Gen. Sheridan spent three weeks and used up many thousand men and horses in making raids the sole purpose of which was to get information about Lee's left. "All that he accomplished," says a modern commentator, "one aviator could have done in a morning's flight."

ONCE upon a time the grocer, as we now know him, was termed a "spicer," and a "grocer" was a tradesman who bought goods of any kind in large lots and sold them in small quantities; that is, he bought *en gros*, as the French put it, and in England he came to be known as an "engrosser"—hence as a "grocer."

AND now comes the "blimp," as the latest war machine. In appearance it is like a perfecto cigar—one that tapers rapidly toward both ends from a fat middle; in effect it is a small Zeppelin, designed to carry only three or four men besides the pilot, but capable of flying at a height of two miles, and of making a speed of forty-five miles an hour. It will be used chiefly for coastal scouting. Sixteen such craft are now building.

A RECENT order of the Post Office Department will help to restore the country post office to something of its former position as a news exchange—a position that it has lost since rural free delivery was established. The order is that the Official Bulletin, which is to be issued under the direction of the Committee on Public Information as the official war-news medium of the government, shall be put in a conspicuous place in every post office and made available to as many people as possible.

THE names of trades are always interesting and sometimes puzzling. Probably nine out of ten persons would have difficulty in telling what a cordwainer is and how he got his name. So, too, with fletcher, although that trade is no longer practiced except in the interests of sport. But among the occupations to which England has granted exemption from the draft are those of mining wolfram and ganister, making wood wool and working on silk shalloon and noils. Lorrymen, *char-à-bancs* men and those employed at fellmongery are also exempt.

IT is fitting that there should be a regiment of marines in the first American fighting force to go to France. All the traditions of that remarkable corps give it priority wherever there is fighting under our flag. Ever since 1775 our marines have been in the thick of it: with John Paul Jones on the Ranger and the Bon Homme Richard; in Tripoli in 1803; on the Constitution in 1812, and with Jackson at New Orleans; at Vera Cruz and at Chapultepec; on the Fiji Islands in 1858; all through

the Civil War; and since then in Africa, Chile, Korea, Hawaii, China, the Philippines, Panama, Cuba, Mexico and Nicaragua, down to recent service in Haiti and Santo Domingo.

CENSORSHIP

CONGRESS has decided against a censorship. Several forms of such a system were proposed, but were rejected one and all. Yet it would be rash to assert that the decision is final. The President and Congress were at one time against "preparedness," but circumstances did not permit them to remain so. No one wants a censorship if it can be avoided. As nothing has yet happened to show that it is needed, public opinion is behind Congress in rejecting it; but the rejection will surely turn out to be only a postponement if events show that the lack of it is endangering the nation.

We make laws against murder and theft, not because all men are thieves or murderers, but because there are some bad men in the community who must be restrained or punished. So it is with a censorship. Most journalists are loyal and honorable, and would scorn to publish intelligence harmful to the national cause or helpful to the enemy. The censorship would be for the few who disregard all other considerations when they have a chance to make a "big scoop."

Nevertheless the Constitution of the United States says in the first amendment: "Congress shall make no law . . . abridging the freedom of speech or of the press." It is an essential part of censorship as practiced by the European governments that matter intended for publication—in this case, war news—shall be submitted to the censor before it is printed, and passed or suppressed as seems to him expedient. Such a provision is an abridgment of the freedom of the press, and no form of words has yet been devised that will impose that condition and yet be constitutional.

But without violating the article of the Constitution, it is possible to make illegal the publication of intelligence injurious to the national cause. Freedom of the press is not infringed by the laws against libel, or by the punishment of those who trespass in the public journals upon the rights or the good name of individuals. It would be absurd to hold that such laws are permissible and yet that laws to protect the country are forbidden. The power of Congress to put a stop to journalistic offenses in time of war is limited; but it is a real power and one that may yet have to be exercised. Congress cannot prevent journalists from committing offenses, but it can punish them severely for committing them; and the fear of heavy penalties will tend to deter all except the most lawless and reckless from acts that come near to being treasonable.

OUR COLLEGE BOYS

WHEN the writer of this article was graduated from college in August, 1861, one of his classmates was in Libby Prison. Exactly one half of the class served during the war in army or navy. All through the spring and summer months of that first year of the Civil War the scenes on every college campus in the land were similar to those we are now seeing. The boys of 1861 did their part; the boys of 1917 are nobly showing that they will do theirs.

It is an inspiring spectacle. Our college students are the pick of our youth. Whether they are poor boys working their way to an education in order to fit themselves for higher places in the world than their fathers occupied, or the sons of well-to-do parents preparing to take stations already made for them, our country produces no finer type of young manhood than they represent. Their conduct at this time makes it clear that the estimation in which the people of the United States hold them is not higher than they deserve.

What are they doing? What are they not doing that young men can do in this hour of their country's call for help? Long before we entered the war there were American college boys driving ambulances in France, flying in aeroplanes over the battlefields, and doing Red Cross work. Many were in the trenches. Now there is no branch of the service into which they are not entering by hundreds and thousands.

"Units" from the different colleges for various duties are embarking weekly for the scene of conflict. Plattsburg and other training camps are fitting future army officers for their duties. The navy and the coast patrol attract those who are invigorated by the smell of the salt sea. Even those who have offered themselves and been rejected as under weight, as

wearers of eyeglasses, or as having some other slight physical defect, are drilling and training against the day when such small disqualifications will be overlooked in the demand for universal service.

The country is safe, and the most optimistic are justified in their confidence for the future, when the flower of our manhood thus dedicates itself to its preservation.

WAR-TIME COOKERY

THE great war that is turning the world upside down is turning old, accustomed diet lists wrong side out. The fact is vividly shown in the experiments now going on in England under the direction of the Food Control Department. The itemized "weekly allowance per head" recommended by the department is as striking as it is meagre: four pounds of flour, two and a half pounds of meat and three quarters of a pound of sugar. The ingenuity shown in changing the constituents of time-honored mixtures is even more striking. Most noteworthy of all is the prompt cooperation of the housekeepers themselves.

Under the high pressure of these strenuous times the British housewife is getting heroic training in the science of home economics. She has found out lately which foodstuffs are imported and which are home grown, what elements are interchangeable and what proportions readjustable, and she is learning to put her knowledge to highly practical use. In many an English kitchen of hitherto rigid schedule necessity has suddenly become the mother of substitution, and half a loaf is not only better than no loaf but, skillfully handled, is almost as good as a whole one.

The war housekeeper is pressing into service oatmeal, corn meal and ground rice to take the place of flour. Rice is the cheapest of the three substitutes, but the oatmeal mixture, so a London paper reports cheerily, "tastes the best." Vegetables in savory combination with stock make an excellent substitute for meat, and glucose, syrup and prepared milk make good substitutes for sugar. When little John Bull puts his thumb into a pudding nowadays he pulls out, not a plum, but a bit of dried apple or apricot that is just as appetizing and much more digestible.

The American housewife who is any housewife at all will be watching with alert interest her English sisters' experiments in thrift. In order to give her at first hand the benefit of their experience, The Companion prints a few of the new receipts on the current Family Page. At first blush they appear frugal, to be sure, and perhaps a little eccentric; nevertheless, they promise—if the pun may be permitted—to pan out quite properly. The fact that they were concocted in the cooking school of adversity is not going to make them any the less palatable—probably it will add to them, instead, a certain undeniable tang.

THE "PEACE" LEAGUE

MANY thousands of Americans, among them some of the most right-minded and right-feeling men and women in the country, must, if they read the evidence produced at the recent trial in New York of Capt. von Rintelen and his associates, have been amazed at the manner in which they had been deluded. Not only the witnesses for the prosecution but admissions from the prisoner's dock proved that the great campaign to prohibit the exportation of munitions and food to the Allies was organized by an agent sent by the German government expressly for the purpose, and that it was financed with German money.

Furthermore, the agent undertook to incite munitions workers to strike; he tried to institute a boycott of the banks that helped the Allies' loans; he sought to help Huerta to cross into Mexico and to create trouble for us there; he arranged pacifist meetings in the large cities; and in general he engaged in furthering enterprises that would cause internal disorder and dissension, and so render our government, occupied wholly with troubles of its own, powerless to act with decision against Germany.

For all those purposes, and particularly to organize and rouse to activity those who would favor peace at any price, it was necessary for Rintelen to act secretly through subordinates. For first lieutenants he needed and found Americans who were willing to sell their services, plausible men who could profess lofty motives and repel with well-assumed indignation the charge that they were working in the interest of Germany. Having got such sub-agents, he found the rest—up to a

certain point—comparatively easy. It was only necessary to play upon the sentiments of that large class of men and women to whom peace is the shibboleth of their national and international principles, and "militarism" the ever-present bugbear. How successfully the league was organized we know; how active and vociferous it was, how stunning were its posters—and how completely it ultimately failed of its main purpose!

Through the persuasive powers of Rintelen and his subordinates, men and women of humane and patriotic ideals were induced to join his campaign. But he did not depend wholly upon the assistance of such persons. He had an immense amount of money with which he purchased other aid.

There were two men of Congressional rank indicted with Rintelen. As to their guilt the jury disagreed, for it was unable to decide whether they acted with full knowledge of the origin and the real purpose of the enterprise to which they lent themselves, or whether they were the unconscious tools of the grand conspirator. If such a doubt could exist about men who, judging from their prominence in public affairs, were presumably not simpletons, it is surely both charitable and reasonable to believe that the rank and file of those who formed the "peace" league were not aware by whom they were led, or whither or why. But they will be more cautious hereafter.

THE INFLUENCE OF RUSSIA

WITHIN the last few weeks the evident demoralization of the Russian army has excited concern. Yet the part that the Russian radicals who are responsible for the demoralization are playing is unlikely to benefit Germany in the end; there are good reasons for hoping that it may be scarcely less effective than Russian military effort could be in bringing about the defeat of Germany. For there is no question that the Russian radicals' cry, "Peace without indemnities and without annexations!" is meeting a sympathetic response in Austria, Bulgaria and Turkey. It may even detach those countries from Germany, for they have long recognized that they could hardly hope either for indemnities or for annexations.

The most conspicuous pro-German statesman in Austria-Hungary, Count Tisza, has resigned from office. The young Emperor seems to be in scant sympathy with Hohenzollern ideas and is trying to free himself and his country from Hohenzollern domination. Austria would probably cede the Trentino to Italy and restore Serbia if Trieste and Transylvania were guaranteed to it. Turkey, if guaranteed the continued possession of Constantinople, would gladly make peace. Bulgaria would be glad to be at peace and occupying only the territory that it held before the second Balkan war. Germany, alone of the Teutonic allies, still hopes for a great profit in the way of annexations and indemnities.

Now, if Austria, Bulgaria and Turkey avail themselves of the opportunity that radical Russia is likely to offer them and make a separate peace, in what plight will such an arrangement leave Germany? It will, it is true, release for service in France and Belgium perhaps a million Germans who have been under arms on the Eastern front. But it will also free the armies of British and French troops that are now in Mesopotamia, Egypt and Macedonia. It will furthermore enable Italy, which has given guarantees against a separate peace with Germany, to add its armies to the French, the English and the American. And it will tremendously simplify the munitioning and provisioning of the Allied armies—for it will no longer be necessary to furnish transport of supplies to remote forces.

The alignment that would result if Russia, Austria, Turkey and Bulgaria were eliminated would be utterly disastrous to Germany. And the withdrawal of Russia from the war means almost certainly the withdrawal of Austria, Turkey and Bulgaria. No Austrian, Bulgarian or Turkish troops will ever be seen fighting in France and Belgium.

CURRENT EVENTS

CONGRESS.—The Finance Committee of the Senate spent the week in considering and amending the war revenue bill. It added to the bill taxes on newspaper and magazine advertising, on automobiles and on excess profits. The taxes on tea, coffee and cocoa were increased, and that on distilled spirits put at such a figure that it is expected, if passed, to put an end

to whiskey-making during the war. — The Senate passed the Gore bill, "to stimulate and regulate the production of food." Among other provisions the bill authorizes the President to close the grain exchanges if he decides that the dealing in futures is abnormally affecting the price of food staples. — The House definitely voted down the newspaper-censorship provision in the espionage bill, 184 to 144. The bill thereupon was sent back to conference. — On June 2 the members of the Italian mission visited Congress and were cordially welcomed there. — The Naval Affairs Committee of the Senate learned from naval witnesses that the accidents on the Mongolia, St. Louis and other merchant vessels equipped with guns were caused by shells furnished with brass mouth cups instead of wooden or paper cups. No more shells are to be so equipped.

© HARRIS & EWING

SENATOR SIMMONS, CHAIRMAN FINANCE COMMITTEE

PREPARATIONS FOR WAR.—On June 5 the registration of men subject to military service under the selective-draft law took place all over the country. Approximately ten million men were registered. Almost everywhere the registration was without incident. A number of persons were arrested by the police on the charge of conspiring to persuade young men to refuse to register for service. The greater number of the arrests were made in New York City, but others were taken into custody in Columbus, Ohio, Topeka, Kansas, and elsewhere. Several of the persons arrested are socialists or anarchists; others are college students and members of the Collegiate Anti-militarism League. — Manuel L. Quezon, president of the Philippine senate, arrived at Washington ready to offer twenty-five thousand Filipino soldiers to the United States for service in France or elsewhere. — Three men, Perissi, Bonaparte and Melchar by name, were arrested in New York charged with sending information of our naval and military preparations to Germany. — Lord Northcliffe is to succeed Mr. Balfour as head of the British war commission in this country.

CHINA.—The military governors of eleven of the northern provinces of China have ceased to recognize the central government at Peking, and on June 3 they formed a provisional government headed by Hsu Shih-chang, who was viceroy of Manchuria under the empire and premier during the presidency of Yuan Shih-kai. The southern provinces, where the republican feeling is strong, are still loyal to the government, but according to newspaper reports the president, Li Yuan-hung, is powerless and virtually a prisoner in the hands of the revolted governors. The underlying causes of the difficulty are not clear, but it appears to be a movement on the part of the reactionary forces in China to overthrow the republic, a movement encouraged if not caused by the weak administration of Li Yuan-hung. What part, if any, foreign influence has had in the affair does not yet appear. Sun Yat-sen and other republican leaders were said to be consulting at Canton, and there was reason to fear that the crisis might lead to a civil war, the seriousness of which would depend on the degree to which the military governors could unite the people of the northern provinces in their support. The seceded provinces are said to have demanded the dismissal of the national assembly, the revision of the constitution, the reinstatement of Premier Tuan Chi-jui and war against Germany.

RUSSIA.—On June 1 the local Workmen's and Soldiers' Council at Kronstadt, the great fortress that defends Petrograd on the side of the Gulf of Finland, took control of the fortress, announced that it no longer recognized the provisional government, and virtually declared its independence of the rest of Russia. The leader of the revolt was a young university student named Lamanoff. The provisional government made no immediate attempt to reduce the fortress, but contented itself with proclaiming the Kronstadt council as false to the revolution and morally outlawed so far as Russia was concerned. — The news of royalist uprisings in Tiflis and other parts of the Caucasus reached Petrograd, and it was said that as a result of the unrest the authorities at Tiflis had felt it necessary to arrest the Grand Duke Nicholas, formerly the commander of the Russian armies. — The General Council of the Cossacks has sent to the provisional government a declaration of loyalty and a demand that the war against Germany be prosecuted energetically. — On June 5 Gen. Alexieff resigned as commander in chief of the armies; Gen. Brussiloff, the most active if not the most able of Russian generals, succeeds him. — The American commission to Russia, headed by former Senator Elihu Root, arrived safely on June 3. The commission of American railway men who are to assist in building up a transportation system in Russia has also reached port safely. — President Wilson has

sent to Russia an important message outlining the war aims of the United States, and the Allied nations were hopeful that it would help to unite Russia and to stiffen its resolution against a separate peace with Germany. — Washington learned that the Japanese government had warned Russia that, if it accepted a separate peace with Germany, it would be regarded by Japan as equivalent to an alliance between the two countries.

IRELAND.—The proposed convention is to consist of 101 members, of whom fifteen are nominated by the crown and the rest chosen by the various local bodies. It is taken for granted that no party will refuse to be represented. The Speaker of the House of Commons, Mr. Lowther, is suggested for chairman.

THE GREAT WAR

(From May 31 to June 6)

The week was comparatively quiet in a military way. The British, French and Italian offensives had all come to a stand, except for the continual artillery exchange that never ceases. Marshal von Hindenburg reported to the Kaiser that the three offensives were all stopped permanently. English and French opinion was that the halt was temporary, and that the drive would be resumed as soon as a sufficient head of ammunition was at hand.

The Allied attacks are, however, obliged to face a very strong opposition, for the quiet on the Russian front has enabled the Germans to concentrate almost their entire army of effectives between Lens and Reims. Counter-attacks in considerable force were made by the Germans in Champagne and by the Austrians against the newly won Italian positions on the Carso plateau, but they seem to have won back little ground.

London reports 112,233 British casualties in May, mostly in front of Arras. The French losses must have been as great, and the German losses may have reached 250,000.

There was increased activity along the Galician and Roumanian fronts, but the fighting was in the form of local skirmishes. Turks and Russians were reported to be in contact in Armenia near the Mesopotamian border.

At least four American ships have lately been sunk by German submarines, the Dirigo, the Vigo, the Frances M and the Barbara. Another Spanish ship and several Swedish vessels were sunk, in spite of apologies that the German government made on previous occasions. The weekly report from London admitted the loss of only eighteen British ships. — Washington announced that the armed American ship Silvershell had sunk a submarine in a running fight. — The British director of food economy is authority for the statement that only six per cent of the grain shipments to Great

Britain have been lost, although the government had allowed for the loss of twenty-five per cent.

London announced air attacks on Ostend and Zeebrugge, where the Germans have naval bases, and added that in a sea fight off Ostend a German destroyer was sunk. On June 5, a squadron of eighteen German planes bombarded certain towns in Essex and Kent. London said that twelve persons were killed. Four and perhaps six German aeroplanes were destroyed by British aircraft.

PHILIPP SCHEIDEMANN

There was much interest in Europe over the socialist conference to be held July 8 at Stockholm, for, although all of the nations at war will not be represented, it is felt that the discussions will have a decided, perhaps a determining, effect on the relations between Russia and the Central Powers. The French government refused passports to socialist delegates from France, but Great Britain will permit Mr. Ramsay MacDonald and several other representatives of the Labor party to attend the conference. Mr. Philipp Scheidemann was the leader of the German delegation, and he is expected by the government to accomplish much toward bringing about an understanding with the Russian socialists. Meanwhile in this country, Mr. John Spargo, long a leading socialist, has withdrawn from the Socialist party, which he declares to be "unneutral, un-American and pro-German."

On June 4, Premier Ribot of France told the Chamber of Deputies that his ministry would only consent to a peace that restored Alsace-Lorraine to France and provided for reparation for the havoc wrought in northern France. The Chamber, by a vote of 453 to 55, reaffirmed its confidence in the Cabinet.

Premier Borden of Canada has suggested to former Premier Laurier the formation of a coalition ministry to carry through draft legislation. The French Canadians are united in opposing the draft, and some of them may be willing to use force rather than submit to it.

A squadron of United States naval vessels is at Rio de Janeiro, prepared to relieve British and French warships of the duty of patrolling the South Atlantic.

See What \$1195

Buys Today in a Mitchell

MITCHELL JUNIOR—with 120-inch wheelbase—sells for \$1195 at factory. Yet it has nearly all the features, all the extras of the \$1460 Mitchell. See what matchless values both these cars embody.

The usual high-grade car is built to the standard of 50 per cent over-strength. The Mitchell standard for every part is 100 per cent over-strength. That means a lifetime car.

The usual car lacks a number of features which are generally added as extras. The Mitchell has 31 features rarely found in cars.

The usual car has some special attractions which serve as talking points. The Mitchell combines all the best of these features found in 257 new models.

The usual car has its bodies built outside, so styles are much alike. The Mitchell has its own body plant, so Mitchell styles are exclusive.

An Economic Question

The problem of building an exceptional car is an economic question. These extras cost money—a great deal of money. In the usual factory they would bring the price too high.

In the Mitchell factory we save their cost by exceptional efficiency. John W. Bate's methods save us about \$4,000,000 on our factory cost this year. And that saving buys these extras.

You will find in the Mitchell a wonderful motor, which we have spent 14 years in developing.

You will find the easiest-riding car in the world, due to Bate shock-absorbing springs. And these springs have never broken.

You will find a car so enduring that two we know of have already run over 200,000 miles each. So well built that 37 engineers of national fame have selected it as their personal car.

Nowhere else, in a fine car, will you find anywhere near such values. Go prove that for yourself.

A SHOWER IN GRANDMOTHER'S GARDEN

By Minnie Leona Upton

ALL the little blossoms are a-bowing and a-bobbing—
Pansies and Petunias, Featherfew and Phlox;
Stately Madam Peony in satin is hobnobbing
With her humble neighborfolk, the gingham
Four-O'Clocks.

See the Scarlet Runners, all a-swinging and a-swaying,
Every blossom gleaming like a jewel newly set,
Moving, oh, so lightly, to the tune the Rain's a-playing—
Such a stately, graceful, joyous, antique minuet!

Morning Glory blossoms all their crimped edges tighten,
But Morning Glory buds are a-swelling fair and free;
Hardly can they wait till the morning sky shall brighten
Ere they open wide their hearts to humming bird and bee.

Where the Sweet Peas swing their censers, rose-and-pearl a-shining,
Where the Clove Pinks glow and sparkle, jeweled fresh and fine,
Where the Vine of Cinnamon in stout curves is a-twining,
Where the Garden Lilies lift their loveliness benign,

Where the Lavender's a-row, with Sage and Coriander,
Mint and Dill and Caraway a-crowding close and sweet,
Where the gentle Rosemary and Southern-wood philander,
What an incense rises, for a garden goddess meet!

Yes, and look you—at her wide-flung window she is standing,
Like her own Forget-Me-Nots her eyes of beaming blue;
Soft the folds of shining, snowy hair her dear brow banding.
"Children, see!" she softly cries. "He maketh all things new!"

RHODA

RHODA had been in the city nine months. She had come as thousands of girls come, with a heart full of dreams and ambitions. She had worked through her six months' business course—worked so hard that she had no time for anything else. She had found a position easily, and now she had held it for three months and was giving satisfaction; she dressed better and had a better room, and had saved a little; and this Sunday night she was lying on her bed in the dark with her hands fiercely clenched, fighting the battle that she had felt coming closer and closer through all those three months.

She was lonely, and there was nothing in the world to look forward to except being in an office for the rest of her life. She had thought that the city meant an opportunity really to live—to learn things and make friends and have good times. She would rather die than go on for years and years without any of those things. She meant it; she would rather die.

And yet:
In the city where Rhoda was thinking of "ending it all" there were more than three hundred churches; if she had gone frankly to the pastor of any one of them and said that she was lonely, he would gladly have put her in touch with the young peoples' organizations.

There was a Young Woman's Christian Association with a membership of nearly five thousand, with clubs and parties and a chorus and a current topics class and story-telling, all as membership privileges. Again, if she had gone there and said that she was alone in the city, any secretary would gladly have introduced her to those and many other activities.

There was a course of free lectures at the public library, and there were free concerts given by the city.

There were, moreover, a score of organizations in the city, working to help in some difficult place, and needing helpers.

There were, besides, the girls in her own office; one or two of them at least would have been glad to make friends, and each friend, almost each acquaintance, is an open door to endless possibilities.

The trouble was that Rhoda had worked and studied to make herself proficient for business, but she had not planned at all to make herself expert in the greatest business of all—that of living.

KEYHOLE TESTIMONY

"I DON'T care if I don't know much about Mrs. Ainslee!" Evelyn declared hotly. "Sometimes a very little thing is enough to know. I never told any of you before, but that day I went to call on her I heard her scolding that lovely little Amy in a way that made me shiver. I never could get over it. She couldn't be a lady and scold like that. It—it is almost more than I can stand even now to think of it. I suppose you all think I oughtn't to tell it anyway, but when you are blaming me for not wanting to 'take her in,'—and when I remember that afternoon,—I just can't help it."

"Speaking of hearing things," said Uncle Charlie, "did I ever tell you of the case of keyhole testimony we once had?"
"It was the case of the Carson jewels. The testimony was pointing to Mrs. Carson's maid, a little, frightened thing who lost all her professional smartness and self-confidence and crumpled up in terror over the accusation. The most damaging testimony was that of another maid who declared that, various things having made her suspicious, she watched through the keyhole one night and saw Felice, who sometimes looked up her mistress's jewels, slip something sparkling into her handkerchief and drop it out the window. It sounded like invention, but nothing could shake her testimony till Bob Gordon, who had the defense, went to the house and proved that no one

looking through the keyhole could possibly see the window. So it turned out like a dime novel.

"I've often caught myself up short since then when I found myself making keyhole judgments of things. A keyhole vision may be accurate so far as it goes, but it's extremely limited. And you can't know the truth about anything until you know its relation to other things."

"But, Uncle Charlie—" Evelyn cried.
Uncle Charlie smiled. "I was preaching to myself, little girl. All the same, you can't make a fair judgment from a single fact, no matter what the fact is."

"All right," said Evelyn. "I accept the challenge."

Three days later Evelyn rushed in.

"O Uncle Charlie!" she cried.

"Yes?" Uncle Charlie encouraged her.

"I was such a brute! I met Mrs. Ainslee to-day and somehow it all came out. She has to fight temper the way some people do drink; her father and grandfather did before her. And she tries so hard! And she told me with tears in her eyes how she felt when she got angry with Amy, and how she had explained to the child, and she always, always told her afterwards that mother had been 'bad,' and was so sorry. 'I don't know what I'd do,' she cried, 'if my little girl had my temper!' I—I can't tell you how I felt, Uncle Charlie."

Uncle Charlie nodded. "I know, little girl," he said.

THE OLD CHINA AND THE NEW

THE meeting of the prince regent, the emperor's father, who only yesterday had been the real ruler of China, all-powerful, master of the property and the lives of his subjects, the successor to twenty-five dynasties of emperors, with Dr. Sun Yat-sen, the republican leader, the conspirator and rebel on whose head a price had so long been set, was a scene that the witnesses will always remember. Mr. Fernand Farjanel describes it in *Through the Chinese Revolution*:

While I was talking with Sun Yat-sen, says the author, a servant handed a paper to the Chinese statesman.

"I must leave you at once," he said. "Here is the prince regent!"

He shook hands and hurried to a room on the upper floor, possibly with the idea of typifying the new order of things by compelling the representative of the imperial government to walk upstairs to interview a son of the people.

As we went out into the hall to watch the approach of the former sovereign, a blast of trumpets heralded his coming, and the palace guards, in their khaki uniforms and flat caps, presented arms at the door. Then we saw, in the sunlight, at the top of the steps, a young Chinese about thirty years of age, with a kindly face and a shaven head, and wearing a blue robe with a black sleeveless overcoat. Accompanying him were two or three Chinese and a black-coated European. An officer of the palace guard preceded the party.

The little group advanced; but numerous clerks and soldiers crowded round, anxious to have a nearer view of the prince before whom, only a year ago, they would have prostrated themselves humbly. They stared at him now impudently, and their little, furtive black eyes seemed to say, "You are nobody to-day!"

An official was obliged to clear the way for the regent, who hurried along and seemed anxious to avoid the stares of the crowd. Escorted by an officer, he passed close to us and climbed the great staircase, walking with bent head and stooping shoulders, as if he bore the weight of his past grandeur. Finally the little party disappeared on the floor above.

On leaving the palace we encountered three or four servants wearing the royal livery, blue robes with white, conical hats covered with red fringes. They were holding some little, ill-groomed horses. That was the sorry remnant of all the imperial pomp!

HIS MAJESTY'S LAND SHIPS

THE novelist Mr. H. G. Wells, in some of his earlier fiction of the fantastic-scientific kind, ventured a good many bold prophecies. After the way of prophets, he made more misses than hits; but the hits were notable and brilliant. Therefore, when he predicts that should the war continue long enough His Majesty's land ships, as the British "tanks" are officially designated, will prove to be forerunners of terrestrial dreadnaughts of unguessed and appalling size and power, ploughing the land as ships of the line plough the sea, the prophecy is interesting. It is dismaying also; for the flowing seas close instantly in the wake of the most enormous battleship, but the monsters he foretells would leave behind them a hideous trail of rack and ruin.

"The young of even the most horrible beasts have something piquant and engaging about them," says Mr. Wells, "and so I suppose it is in the way of things that the land ironclad should appear first as if it were a joke. Never has any such thing so completely masked its wickedness under an appearance of genial silliness. The tank is a creature to which one naturally flings a pet name; the five or six I was shown, wandering, rooting and climbing over obstacles round a large field near X—, were as amusing, as disarming, as a litter of lively young pigs."

They could not have been as nimble, however, since Mr. Wells also compares them to slugs "going over the ground with the sliding speed of snails"; and again, which is biologically true of the slug, "unexpectedly complicated inside." He was permitted a brief trip on board—a rare privilege indeed for a civilian.

"The tank is as crowded with inward parts as a battleship. It is filled with engines, guns and ammunition, and in the interstices, men."

"You will smash your hat," said Col. Stern. "No; keep it on, or else you will smash your head!"

"You see a hand gripping something; you see the eyes and forehead of an engineer's face; you perceive that an overall bluishness beyond the engine is the back of another man."

"Don't hold that," says some one. "It is too hot. Hold on to that." The engines roar, so loudly that you can hardly hear guns outside; the floor slopes until one seems to be at forty-five degrees or thereabouts; then the whole concern swings up and sways and slants the other way.

"You have crossed a bank. You heel sideways. Through the door, which has been left open, you see the little group of engineers, staff officers and naval men receding and falling away behind you. You straighten up and go uphill. You halt and begin to rotate. Through the open door, the green field, with its red walls, rows of work sheds and forests of chimneys in the background, begins a steady processional movement. The group of

engineers and officers and naval men appear at the other side of the door, and farther off. Then comes a sprint downhill.

"You descend and stretch your legs. About the field other tanks are doing their stunts. One is struggling in an apoplectic way in the mud pit with a cheek half buried. It noses its way out and on with an air of animal relief."

Without doubt the Germans hope that the funny and formidable tanks will never outgrow their infantile limitations. At present they are the huge and joyous joke of the British army. Each tank is named, not officially but hilariously, Willie, Susan, Elsie, Nightingale or anything else that is most inappropriate. At present the tank with the most brilliant exploit to her credit—she took a fortified position, many prisoners and a German colonel—is His Majesty's land ship *Crime de Menthe*.

ONCE WAS ENOUGH!

Mrs. McGon (not pleased with supplies)—Have you any of the sugar you sold me on Monday left?
The Grocer—Oh, yes, mum; plenty. How much would you like?
Mrs. McGon—None! —Will Owen in the Sketch.

MR. PEASLEE ON BEARING SUFFERING GLADLY

"THAT youngster out to one side," commented Mr. Hyne judicially, as he watched a group of children playing, "seems to be kind of one too many, 's you might say. He jest gets shoved to one side and left out, seem's it."

Mr. Peaslee nodded. "Lots of times it happens like that," he agreed; "there'll be one young one that the rest don't pay no 'tention to, and all he can do is to stan' round and wish for a chance to git in and have a good time with the rest of 'em. Kind of hard on a little tike, seems to me."

As he finished speaking one of the minor accidents of childhood happened swiftly. A rope carried by two of the larger boys caught the lonely little fellow across the feet; there was a twinkle of stubby little legs in the air and the sound of a soft little face striking the gravel. His screech of pain and anger brought the two old men to their feet, while the group of playing children converged unerringly on the sufferer.

"One sure thing—he ain't killed, to go by the uproar he's makin'," observed Mr. Hyne.

Even before they reached the scene of the mishap the noise had partly lulled, and some of the larger boys had raised the little boy to his feet and were assiduously brushing him off, while others hung about him with sympathetic chatter. The unwonted attention had its effect upon the victim, and a certain perkiness became visible in his demeanor. For once he was the centre of interest—and he was making the most of it.

"Might's well go back and set down," said Mr. Peaslee, and as they settled once more into their chairs he was moved to further speech.

"Beats all," he commented slowly, "how much alike children and grown-up folks are. They've both got 'bout the same hankerin's and feelin's after all. For instance—all that touse out there jest now put me in mind of Solon Padden."

Mr. Hyne debated deeply. "I guess I remember him, now you speak of him," he said, "but I d'know when I ever thought of him before."

"That was jest it," said Mr. Peaslee sedately. "That was what wore on Solon all his life; there wasn't anything special about him for folks to notice or remember."

"Mebbe he might have lived and died and I never'd have known how he felt," Mr. Peaslee went on deliberately, "if John Barton's hosses hadn't took a notion to run away one day when he left 'em down to the gristmill, with his little grandson settin' on the seat holdin' the reins. I d'know what started 'em. The fust any of us knew about it, they come down the road, with the tip cart swayin' and boumein' and the child hangin' to the reins and stickin' onto the seat by a miracle!"

"Four-five of us jumped for 'em," Caleb said soberly, "but the best we could do was to swerve 'em a little and mebbe slow 'em a mite. They got by and started down the hill to'rds the brook—and right then Solon come into it!"

"He was right at the top of the hill road, but nobody give any heed to him, not thinkin' he amounted to anything, anyway. We all looked for him to dodge and let 'em get by him, but 'stead of that he jumped square at their heads and made out to grab both bridle, although how in the world he done it I never could make up my mind. And of course, no hosses are goin' to lug a man on their bridles a gre't ways. Solon kep' saggin' on 'em, and pretty soon they stopped."

"Well, Solon was consid'able bunged up. One leg was busted, and he was hurt some other ways. We got him laid out side of the road, and then we all stood round tryin' to make ourselves see jest what a courageous man we had amongst us, and John Barton was tryin' to tell him and not makin' a very good job of it. Fin'ly the doctor come to take him home, and I went along, too. After the doctor'd fixed him up, I undertook to tell him how sorry I was, but he stopped me."

"You needn't be sorry a mite," says he, with his face shining perfectly contented. "I ain't sorry—I'm glad. This is the fust time in all my life," he

says, earnest-like, "that the men in this town have ever g'n me any notice or reckoned I was a man, same's they be. I don't begreth breakin' a leg to show 'em—or two legs, if 'twas needful. It was with it," he says, contented as if the hosses had done him a favor—which mebbe they had, the way he looked at it—I d'know."

"Jest about the same's that youngster felt; I give in 't you're right," agreed Mr. Hyne soberly.

A ROGUE BISON

NEXT to a man-eating tiger there is nothing that the natives of India dread more than a rogue bison. One of these beasts frequented a hillside in the Western Ghats near which Mr. Edwin L. Arnold, who tells his experiences in the *Cornhill Magazine*, had camped. The bison slept in the woods during the hot hours, and came out to feed only at morning and at night. One day it chased and nearly killed the wife of a native.

"Unless the sahib helps us we shall all be killed," the people complained, and Mr. Arnold, determined to kill the bull, set out at dawn the next morning. He followed the jungle path up the hill for a mile, and there climbed a lookout point and sat down to wait for daylight. Half an hour had gone by when he looked to the north, and there, not a quarter of a mile away, standing on a rocky bluff, a huge form was silhouetted against the sky. Just below where the hunter was sitting ran a shallow stream, and two hundred yards down its course grew a clump of bushes.

Sliding into the watercourse, the hunter crawled on hands and knees until the bushes were between him and the bison. Then, scrambling up the bank, he ran to the clump and peeped through the bushes. The bison had gone. Thinking that his quarry must be on the other side of the bluff, Mr. Arnold ran to the summit; but the bull was not in sight. For several minutes the hunter lay breathless looking this way and that. Then he turned round and saw the huge bison glaring at him only thirty yards distant.

The hunter fired hastily. The bullet struck high between neck and shoulder, and the next minute, with a tremendous bellow, the bull charged full tilt. He came down in a storm of dust and rattling stones; as there was no possibility of cover, the man waited until he was nearly within arm's reach and then jumped aside. Unfortunately his foot slipped, and, as the animal went blundering by, he fell heels over head. The beast shot past fifteen yards or more before it could pull up. The man came to a stand first, and opening the breech of his rifle, slipped in another cartridge.

Again they stood facing each other. Then, catching his breath, the man fired. The shot struck fair in the breast and the animal fairly reeled. But he charged again with extraordinary swiftness. The hunter stepped aside and the beast lunged at him with his horns as he passed. As the bull floundered by, another shot struck point-blank behind his ear. He went down with a tremendous thud, turned over, kicked once or twice and was dead.

That evening there were great rejoicings in the village, no end of chattering round the big fig tree, and a great amount of drum beating and garland weaving.

SALUTING MOUNT VERNON

WHEN the Mayflower, bearing the French commissioners to the United States up the Potomac to Washington, passed Mount Vernon, are told by the newspapers that the crew of the vessel were drawn up at salute and the ship's bell was tolled. Marshal Joffre was particularly touched by this ceremonial, and as the yacht passed on up the river, he walked to the stern and stood silently watching the old mansion until it was hidden from view.

What the newspapers did not tell us and what many Americans do not know is that the ceremony that so impressed our distinguished visitors has been for a great many years prescribed by the naval regulations. No United States ship of war may pass Mount Vernon without paying that tribute of respect to the memory of Washington.

As the vessel approaches the beautiful old place, the commander orders the bugler to "Sound to quarters." The crew, officers and men hurry to their places, the word passes to form along the side of the ship that faces Mount Vernon, and to stand at attention. As the ship comes abreast of the mansion the command "Salute!" rings out. Every man raises his right hand to his cap and holds it there while the ship's bell tolls twenty-one times, once for each gun of the national salute.

"Sound the retreat!" comes the order as the last stroke of the bell trembles into silence; and the bugle sends its plaintive notes across the water to the tree-clad slopes of Mount Vernon, from which the echo faithfully repeats them to the ship.

It is a charming ceremony, simple, yet indescribably moving, no matter how often one sees it. No wonder Marshal Joffre, who, like all good Frenchmen, reverences the name and memory of Washington, was stirred. It is fortunate that his earliest impressions of America should have been shaped by the beauty of that scene and the tender meaning of the ceremony that he witnessed.

NOT HIS NAME

IN Dublin a zealous policeman caught a cab driver in the act of driving recklessly. The officer stopped him and said:

"What's yer name?"
"Ye'd better try and find out," said the driver peevishly.

"Sure, and I will," said the policeman, as he went round to the side of the cab where the name ought to have been painted; but the letters had been rubbed off.

"Ah!" cried the officer. "Now ye'll git yerself into worse disgrace than ever. Yer name seems to be obliterated."

"You're wrong!" shouted the driver triumphantly. "Tis O'Sullivan!"

BUT SHE LIKED IT!

VERY strong peppermints are grandfather's favorite confection. One day, says the *Christian Herald*, he gave one to four-year-old Marjorie, and waited slyly to see what she would do when she should discover the pungent flavor of the candy. A few minutes later he saw her take the partly eaten peppermint from her mouth and place it on a table beside an open window.

"What's the matter?" he asked. "Don't you like the candy?"

"Oh, yes," replied Marjorie, "I like it, but I thought I'd let it cool for a little while."

THE CHILDREN'S PAGE

KITBIRD LAND

BY OSWALD M. RICKARD

It's hard to make you understand
The wondrous ways of Kitbird Land.
But there, if you should chance to look
Beneath the oak, beside the brook,
You'll see that little birds can dwell
In peace with cat folk very well.
And many of them you will find—
The singing birds of every kind,
And kitty cats of every hue;
And with them you'll discover, too,
The squirrels, mice and bunnies there,
Who live without a fear or care,
And mingle in a friendly way
In all the frolic of the day.
And now, perhaps, you'll understand
How strange a place is Kitbird Land.

When tea time comes, the table's laid
Beneath the oak tree's ample shade,
And birds and pussies gather there
The dainties of the feast to share.
The blackest black cat pours the tea,
A very charming hostess she.
Her bird friends come with chirp and whir
To pass the time of day with her.
The robin is the first, and then
The bluebird, chickadee and wren.
The gray cat comes with cheerful purr,—
All mice and birds are fond of her,—
And bunnies from the woodland ways,
And squirrels, both the reds and grays,
All linger for a social chat
Around the gracious hostess cat.

And while they thus are sipping tea
And gossiping beneath the tree,
The good nurse cat has heard the call
Of duty high above them all,
And up among the oaken leaves
That kind and thoughtful puss relieves
The hunger of a little brood
Of robins that are lacking food.
The mother bird remains below,
Not noting how the moments go;
But good nurse cat was quick to see
The hungry babies in the tree,
And so she promptly hastened there
To give the brood her tender care.
And now I know you'll understand
How strange a place is Kitbird Land.

THEY MINGLE IN A FRIENDLY WAY IN ALL THE FROLIC OF THE DAY

HOW BOBBY MADE HIS OWN FUN

BY PATTEN BEARD

WHEN Bobbie woke in the morning, it was dark and wet outdoors. While he was yet quite sleepy, he could hear the patter! patter! of rain on the cottage roof, and the wind shook the window casings. When he was wide-awake the first thing he said was, "Now it's going to be a whole long rainy day!"

It looked so, and a long, wet, summer rain-storm, too!

"You will have to make your own fun to-day," mother said. "Can't you and sister think of some new game to play?"

Bobbie shook his head. "I wanted to go out to play croquet, and sister wanted to, too," he replied dolefully. "It would have been fun to play croquet!"

"But I know how you can play croquet indoors," mother suggested, "and the best part of this croquet is the good time you will have

inches long. She took off the upper part of the box and told Bobbie to take all the glossy paper covering off.

Next, mother cut the upper part of the box in half, across its narrow part. She cut the lower half of the box in the same way. Then she cut out the cardboard so as to leave the box rims with only a very small strip of the cardboard that belonged to the top or the bottom of the box. When she stood the box rims on end upon the floor, there were the wickets! And one box made four wickets.

"We'll make one more wicket," mother said. "This will be the middle one, and we'll make it from a different shaped box cover, for I have no other box like the first one."

"But the posts, mother!" Bobbie exclaimed. "How can we make the posts?"

"I know!" said sister. "I know!" And she took the four big spools that mother had brought and stood them one on another. The spools made posts of just the right size. Bobbie glued two spools together. "The balls can be spools, too," sister suggested. "Can't they, mother?"

THE SUMMER RAIN

BY MARY F. BUTTS

When the buttercups are thirsty
And the clovers' roots are dry;
When the little ruffled daisies
In the warm air softly sigh;
Then the clouds bend lower, lower;
Of the dear earth's needs they think.
And they send a shower of raindrops
For the thirsty flowers to drink.

In the forest, in the valley,
On the mountain's lofty crown,
Happy blossoms smile their welcome
As the rain comes tinkling down.
Little buds burst into blossom,
Putting on bewitching graces;
And they thank the bending heavens
By the brightness of their faces.

making it, I think. You can make a whole little croquet set yourself, and you can play with it on the floor afterwards."

Bobbie brightened up. "How?" he demanded, and his eyes were big with interest. But mother said, "Wait. You'll see." And he and sister ran down to breakfast, wondering how mother could make the toy croquet set.

After breakfast mother said all was ready to start the fun. She put two newspapers down on the floor to catch the scissors snippings, and then she gave Bobbie the scissors. "We will make the wickets for the croquet game first," she explained.

In mother's hand was a small, narrow box with a cover that fitted down over all the inner box rim. It was a box that had once held chocolate peppermints and that was covered on the outside with glossy paper. It was about six

"Yes," said mother. "But I think marbles would be better—marbles of the same size but different in color."

Bobbie had a whole boxful of marbles, and so that was all right; but neither he nor sister could think how mother could make croquet mallets.

This is how she did it: She cut two long strips of cardboard an inch wide and eight-een inches long. Then she took one strip and bent it in the middle, carefully, so that it did not break, and in the bend she put an empty spool. Then she fastened the cardboard tight round the spool with a bit of string. Then she tied the two loose ends of the cardboard together—and there was a croquet mallet all done. Bobbie made another just like it.

When he had found his marbles he gave one to sister and took one himself. Together, they laid out their croquet ground on the carpet. Each wicket was a foot from the next one, and the first and last wickets were each a foot from the posts. They used a ruler to measure with.

They counted out to see who should play first, and the turn fell to sister. She placed her marble six inches from the first wicket and hit it with her little mallet. The marble went through the wicket; so she had another turn and started for the side wicket, since the set had only five wickets. It was great fun! Once or twice a wicket fell over, but no one minded; they just put it back in place and tried the play again, to make it quite fair. Bobbie won, but sister was very close at the finish. When they croqueted the balls, of course they had to hold one of them down with a finger. The ground was supposed to be the length of the ruler beyond the wickets and posts. If the balls went beyond, they were brought back to the proper distance.

Bobbie and sister grew so much interested in the game that they did not notice that the sun had come out, and they were surprised to find that it was dinner time.

"Let's play on the porch this afternoon!" cried Bobbie. "I think the game we made is the best fun I ever had. I wish I had known about it long ago when we had those other rainy days."

WHAT BABY WANTS

BY GRACE F. PENNYPACKER

Baby has a pretty toy,
Baby has a rattle,
Baby has a soldier boy
All arrayed for battle.

Baby has a horn of tin
That dangles from his crib;
Baby has a golden pin
That clasps his dainty bib.

Baby has an ivory ring,
A dolly soft and big,
A lot of spools upon a string,
A little flannel pig.

Baby has a woolly ball;
Its coat has suffered much.
But what he really wants is all
The things he mustn't touch!

PUZZLES

1. TRANSPOSITIONS

In my four letters you can find
Five plain words, if you've a mind.
I'm high and bright and far and fair,
But if I fell, you would not care.
Shift me about, and I become
A ruler driven from his throne.
Shift me again, and you behold
What gifted minds have turned to gold.
Change me around, and then I'll be
Gay sailors on the briny sea.
Change me again, and after that,
I beg you, do not call the cat!
In my four letters, if you're wise,
Five words stand plain before your eyes.

2. RIDDLES

There are two for each of us alive,
And most of us have three;
Some persons carry four or five,
But not conveniently.

A man will give his last away,
A woman turn and take it,
He has no less, she has no more,
What answer do you make it?

II

I only live a few short hours,
Yet I possess unusual powers.
My coming makes the children cry,
And many grown-up people sigh.
I send to work an idle throng,
And once a year I come along;
Although unwelcome, yet I stand
For youth's great need in every land.

III

I'm not as sweet as summer rose—
Sometimes I make you hold your nose!
And yet you need me every year,
Without my presence, you would fear.
Then when I've done my best to keep
Possessions safe—and hidden deep—
About my feelings you don't care,
For what I've touched, you—go and air!

3. FROM THE MENAGERIE

To a word of five letters, meaning to instruct,
add a letter; transpose, and find an animal.

To an ore-producing mineral vein add a letter; transpose, and find an animal.

To wickedness add a letter; transpose, and find an animal.

To a vulgar person who apes gentility add a letter; transpose, and find an animal.

To unsound in limb add a letter; transpose, and find an animal.

To small bullets add a letter; transpose, and find an animal.

4. ACROSTIC

I'm found in bugle, not in drum;
I'm found in add, not in sum;
I'm found in wonder, not in awe;
I'm found in burned, not in raw;
I'm found in batter, not in dough;
I'm found in grief, not in woe;
My whole looks very bright and fair
When we wave it in the air.

5. CONUNDRUM

What am I?

I have three forms. One is as light
As airy thistle-downs that float.
The faintest breath of summer breeze
Sets me a-sail like fairy boat.
Another, and I swiftly run
To find the lowest place I can:
Is half the use to child or man.
My last form makes me light again,
And sparkling—beautiful to see.
In summer you all like me well;
In winter—then you just love me!

6. CHARADE

A boy's nickname, my first you'll see,
Up high my second cannot be;
Abbreviation, that's my third,
The whole will form a magic word;
A time that makes the children gay,
Though not a truly holiday.

7. NUMERICAL ENIGMA

I am a word of eight letters. My 5678 is wealthy;
my 4563 is the edge; my 3672 rimes with nice; my
78632 is a set of bells; my 175642 is a writer;
my whole is a famous singer.

PLUS AND MINUS PUZZLES

By Sam Loyd

The answer to the first puzzle is a fish; to the second, a large city; and to the third, a bird.

Ask any questions you wish about the contents of this page. They will be gladly answered.

Address your letters to THE EDITOR OF THE GIRLS' PAGE, THE YOUTH'S COMPANION, BOSTON, MASS.

NATURE'S MUSIC

YOU need but little knowledge of music to recognize the beauty and to comprehend the wisdom of nature's plan in her music. It is simple, and the knowledge of it will give you a great amount of pleasure, as you can discover for yourself by going out into the fields and woods prepared to listen intelligently.

It is a trite statement that nature is the inspiration of poet, artist and musician, but it is not so often recognized that the degree in which it is possible for each of them to translate the inspiration into the terms of his art is by no means the same. A poet grasps nature's deepest meaning, clothes it in pleasing phraseology and touches the world. An artist, in tune with her subtlest mood and having technical skill, paints according to his school and temperament and gains attention. But the musician is hampered. He hears nature's loveliest melodies, yet his technical skill, his sympathy and his power of interpretation all prove futile—he cannot reproduce any of nature's exquisite music. He may draw his audience into the dreams that his selection presents, may picture moods, may excite the intellect by the beauty of form as he plays, but nature's tonal beauty is a sealed book to him. Here is the reason:

Strike a key on the piano—a white between two black ones, for example—and sing the tone that you produce. Then strike the black key to the right of the white one and sing that tone; again, the black to the left of the white. Your voice rises slightly on the second and drops on the third. A half tone is the least difference in the pitch of any two given sounds on the piano, and there you have the secret of nature's musical method and the limitation of the piano. Strike any white key and slide the voice up to the next black key. A few attempts and you will succeed in varying the pitch of the voice at least twice between the sounds of the two keys, thus obtaining, in a slight degree, the effect of a guitarist's glide. That reveals to you the fact that stringed instruments and the voice are not so limited as the piano is.

Now listen analytically to a bird's song. Go to the piano and get the pitch of his first note,—far up to the right on the keyboard,—then try to reproduce the song you heard. You cannot do it, even though you may be a skillful musician. The fault lies in the piano, which, because of the limitations of its scale, cannot possibly reproduce the fractions of half tones that make the music of nature so elusive and sweet. It is because of this limitation of the keyboard that the pianist must invariably fall when he tries to represent the beauty of bird songs, murmuring brooks and bubbling springs. Every musician knows the flatness and futility of the attempt.

Listen to a brook. The murmur is there, delicate, musical, pleasing, gently insistent; but it is in fractions of half tones, sliding in its murmur. Notice the sighing of wind through a forest of pines. It is an exquisite lullaby, rhythmic, melodious, expressed in fractions of half tones. Analyze a surging storm, beating waves, dripping rain—all follow the same plan. Turn to the songs and calls of nature's animate objects,—the cricket's cry, the rasp of the locust, the hum of the bee, the cheep of the sparrow, the cluck of the hen,—all are in fractions of half tones.

In much of nature's music melodious effect is conspicuously absent, but always the rhythmic swing is there; it is in every moving body, every continuous sound. Trees sway, grass nods, waves splash at regular intervals. Even the intonations of the human voice and the roar of the city street are governed by the laws of rhythm. Imagine the clash and clang of commonplace sounds if nature's voices were more assertive and less delicately shaded, and if the confusion of all motion were haphazard!

To go further into nature's plan: birds phrase and use accent, just as surely as man does in his music. Listen to a mocking bird. Each of his twenty-seven themes is perfectly phrased; count as he repeats one theme three or four times in varying metre, and you will see the accuracy of the assertion. Even the raucous rasp of a locust is a fine example of rhythm and tone shading.

When an eminent musician was asked recently why a system that made use of fractions of half tones had not superseded the one now in use, his

reply was, "But doesn't it take a lifetime to grasp our present system?"

A change would mean a complete revolution of notation and harmony, and a reconstruction of musical instruments. Perhaps, however, the time will come when man, taking nature as his guide, will set himself to the task.

TOOLED AND CUT-LEATHER MAT WITH STRAWBERRY DESIGN

MAKING AND APPLYING DESIGN

V. Tooled and Cut-Leather Work

THERE are many useful articles that you can make of leather—bags, cardcases, magazine or book covers, mats for the table—and decorate by tooling and cutting. The process is simple: you trace your design on the leather, and then with a special tool work over the outlines, pressing them down to varying depths and widths. Sometimes you can add to the attractiveness of the article by cutting away parts of the design. The work requires only a few tools and is not hard to do.

The strawberry is the subject of the analysis shown herewith, and also of the design on the mat in the illustration. The strawberry is appropriate both to the month of June and to the circular border of the mat, for since the plant does not grow very high it can be used entire in the design. There are many other forms of nature that are just as suitable for this work; choose whichever one you like best.

Following the principles set down in the first article of this series, analyze the plant and select the form or forms that will make a pleasing unit, adaptable to your purpose. Before you set to work you will of course have decided roughly the nature of your design—whether you will use for a book cover, for example, only one unit, placed perhaps as the dragon-fly unit was placed on the book cover in the May number of this series; whether you will make an all-over pattern in the manner of the crocus design printed on the bag in the April number; or whether you will combine your units to make a border, as was done in the circular border of the leather mat.

In buying the leather for this work, get a kind that when dampened will take a deep impression from the tool, and will retain that impression clear and distinct when it has dried. Most leather firms and art stores that sell leather for such work have samples of various kinds and colors. Test the samples and find which are best for tooling. Russian calf and cowhide are excellent. You can buy them either by the whole or by the half hide. If you wish only a small quantity, you will probably have to buy it by the square inch. Often upholsterers have left-over pieces that are too small for their work but are large enough for mats. Those you can buy by the pound at a very low price.

One tool that you will need is a fine steel crochet hook with which to trace your design. There are special tools made for that purpose, but the crochet hook serves just as well. For tooling the leather use a flat steel tool about half an inch wide and a sixteenth of an inch thick, tapered to a blunt point. The steel blade is about three inches long and has a handle four inches long. You can buy the tool, which is sometimes called a "metal burnisher," at any store that sells art materials; the prices vary from thirty-five cents to seventy-five cents. For cutting the leather you will need a sharp stencil knife with a point sharpened on both sides. That will cost about seventy-five cents. A sharp penknife will do the work almost as well. It is best to have a little whetstone so that you can keep your cutting tool sharp.

Draw your design in full size and complete on Manila paper or any other paper that is not too thick. Place your piece of leather on a smooth board and wet the surface of the leather with a sponge. Be sure that you saturate the entire surface the first time, otherwise there is danger that a watermark will show. After the water has dried into the leather so that no drops are visible on the surface, place the drawing of the mat on the leather and fasten both paper and leather firmly to the board with thumb tacks.

With the crochet hook go over each line of the design, as if you were making a tracing, and be sure to press down hard enough to make an impression on the leather. When you have gone over all the

lines, lift up a corner of the paper to make sure that every line has left its impression. It is a wise rule always to leave at least two thumb tacks in place, until you are sure that the design has been perfectly transferred. Otherwise, if you should wish to replace the paper for further work, you will have trouble in getting it on exactly as you had it the first time. When the tracing is finished, remove the paper and go over the lines again with the crochet hook to make each one clear and definite.

Now, holding the leather tool in the same position as you hold a pen when you write, go over the lines until they are of the desired width and depth; they should be smooth and unbroken. During the tooling process you must keep the leather moist but not too wet. If the leather seems spongy and the tool presses out drops of water, the material is too wet, and you had better stop work long enough to allow the leather to dry out a little. Sometimes a small spot in the leather will pucker when you tool it. In that case use the tool only in one direction, either toward you or away from you; the trouble is caused by a bad spot in the skin. If the leather tool or the crochet hook scratches the leather, it is probably too sharp; you should blunt it a little on the whetstone.

The little seeds in the strawberry, the veins in the leaves and all other delicate lines are best worked with the crochet hook. With the butt of a small key—especially a watch key—you can make an attractive background of tiny circles; sometimes you can effectively combine circles of different sizes in backgrounds or borders.

For pressing down larger surfaces in backgrounds, the end of a long-handled glove button makes a satisfactory tool.

A design is often improved if parts are cut out; especially in large mats you can in that way get an appearance of greater lightness and daintiness. Tool the lines that are to be cut, and then with the stencil knife or penknife make clean, sharp cuts. After you have cut away the various parts, stain the edges with brown ink to match the other parts of the leather. If there is much cutwork, a lining of silk, felt or some other suitable material under the leather is necessary. You can paste the lining to the under side of the leather or stitch it to it on the sewing machine.

If you wish to add a touch of color to your design,—and it is sometimes a gain to do so,—use oil paint thinned with turpentine. Put it on with a soft brush or a rag. Use soft colors, such as bronze, dull green, red and brown; they are much more attractive than vivid colors.

A CHILDREN'S FAIR

ONE of the pleasantest things about a fair is the opportunity it offers visitors to buy articles that their own fingers have not the skill to fashion. But the most unskilled hands of all are those of the little children, who seldom have funds enough to buy even one of the treasures that they look at so longingly. For that reason a children's fair at which only one-cent articles are on sale will be hailed with delight by the little ones, while the older sisters who plan it will be well rewarded by the children's pleasure.

Before deciding upon the place and time for the fair, plans should be made for the articles to be placed on sale. The stock should include one-cent dolls, tiny cardboard bedsteads with linen and quilts to fit, dolls' clothes and the like for the little girls; and whistles, buttonhole flags and such things for the little boys. A baby show should also be planned, the babies being, of course, the dolls of the little girls who attend the sale. Admission and registration fees should be at the uniform price of a cent. A luncheon consisting of tiny one-cent sandwiches, cups of cocoa and small fancy cakes will prove an attraction.

In arranging the booths, particular attention should be paid to making them attractive from the little-girl and little-boy point of view. Tables twenty-seven inches high and decorations suggestive of Mother Goose and her numerous family can be counted on to please.

In advertising the fair, it should be stated that older people will be charged a higher price for admission and that they will not be allowed to buy anything until after the close of the stated hours. If it is announced at the start that the proceeds are to be given for war-relief work or some other patriotic purpose, the children will take additional interest in making their purchases.

A HOUSE-BOAT VACATION THAT YIELDS AN INCOME

[The fifth in The Companion series
Earning Money at Home]

MANY girls who are eager for a vacation and need one, nevertheless feel that during the summer they must earn at least pin money. A young woman in New Jersey hit upon a plan for killing both birds with one stone. Having a deep-rooted love of the water, she decided to combine business with pleasure under the roof of a house boat.

First, she put an advertisement in the city papers to the effect that she would take boarding guests for a month's vacation on a house boat. The notice stated also that commuters would be welcome. From the replies that began at once to come in she selected the five that seemed to her most promising, notified the applicants, and requested a dollar in advance for each reservation.

The five dollars thus taken in at the outset paid her advertising bills and gave her an option on a fishing boat large enough to accommodate about half a dozen persons. The rent for the boat when she took possession was two dollars a week. Each guest paid five dollars a week for room, breakfast and dinner, which brought in over a hundred dollars for the month. The first season she did all the work herself and cleared fifty dollars, besides

having a vacation. After a while she began to lay plans for buying a boat of her own.

The Nancy May is the outgrowth of that first modest venture. It is a real house boat of two stories, with porches and an upper-deck garden, and is a paying investment for its owner, since it provides her with both a summer vacation and a good income. There are accommodations for twenty-five persons, each of whom pays seven dollars a week for lodging and two meals.

The idea may serve as a valuable suggestion for other women.

COLLARS FROM HANDKERCHIEFS

EVERYONE knows that dainty collars freshen and brighten even the plainest costume; therefore any girl who can sew at all will welcome the handkerchief collar sets here shown. The colored handkerchiefs that furnish the material cost very little, and the working directions are so simple that even a small girl can follow them without difficulty.

The collar-and-cuff set shown in Fig. 1 is made from two handkerchiefs of sheer white voile with one-inch rose-colored borders.

Draw the patterns in black ink on a heavy

FIG. 1

Manila paper, following the diagrams in Figs. 2 and 3. Those diagrams are planned for a handkerchief twelve inches square, but the relative proportions will hold good for a handkerchief of any size.

Fig. 2 shows the square body of the collar and one cuff; Fig. 3, the other cuff and the lapels. Lay the handkerchiefs smoothly on the patterns that

FIG. 2

FIG. 3

you have drawn. The lines will show through distinctly. With a pencil trace the solid lines lightly on the material, and cut out the several parts on the lines that are dotted in the diagram.

To put the collar together, fasten the lapels to the foundation in such a way that B in Fig. 3 will fall on B in Fig. 2, and in like manner, C on C. When that is done, A and A in Fig. 3 will overlap at A in Fig. 2. Seam the points together at A. Trim the lapels close to the curve of the collar, leaving only an edge for basting, and add a narrow binding. The colored hem of the foundation will show through with pretty effect. To make the cuffs, merely hem each piece round the edges, stitch a narrow binding on it and sew the ends together. A frill of net or of lace on the collar and cuffs will contribute an attractive finishing touch.

FIG. 4

The second collar (Fig. 4), calling for only one handkerchief, is even simpler. Make your pattern according to the diagram (Fig. 5), trace it on the goods, and cut out the collar along the lines that are dotted in the diagram. Match A B and C D in the lower hem with the upper A B and C D. If the handkerchief has a colored centre, make a bow of the surplus piece. To do this, turn in the edges of the piece, fold it horizontally several times, and "pinch" it in the middle. A neat finishing-off bow will result.

FIG. 5

A ROSE CAKE

TO be able to make a rose cake was an accomplishment coveted by little girls some decades ago. The first step was to spread a layer of freshly gathered rose petals in a bowl or deep dish. A layer of brown sugar followed, then another of petals, and so on until the dish was full. Cinnamon or some other spice was sifted over the top, and the dish was covered with a plate, placed in a tin box or securely wrapped in brown paper and buried in the ground overnight. When it was withdrawn, it was a toothsome morsel, dear to the heart of childhood.

A NOVEL DECORATION FOR LAMP SHADES

A NEW idea in decorating lamp shades is the use of brightly colored designs cut from chintz. Convalescent Canadian soldiers in a military hospital got the idea from Princess Patricia of Connaught, and, following it up, have made most attractive shades of durable white paper ornamented with gay chintz figures.

When translucent paper is used for the body of the shade, only those colors that readily transmit light should be employed for the decorations, such as orange, rose, and certain of the reds and yellows. If you wish the shade to serve particularly as a daylight ornament, opaque paper will be the best choice for the foundation; then the designs may be of blue, green, or any other less transparent color. The effect of the richly colored chintz figures against the solid background of the shade is very striking.

The shades can be made in several different shapes, but the conical and the cylindrical forms

ANALYSIS OF THE STRAWBERRY

CONTINUING THE GIRLS' PAGE FOR JUNE

are the best to choose for first experiments. No directions will be required for making a cylindrical shade; a long rectangle of the proper proportions is all that is necessary for a pattern. The conical shade, eight inches high, nine inches across the top and about twelve and a half inches across the bottom, you can make as follows:

Lay a large sheet of wrapping paper on the floor. To one end of a piece of string a yard long tie a lead pencil, and on the same string, at a distance of thirty-two and a half inches from the pencil fasten a tack. Stick the tack into the floor and, using it as a centre, describe an arc upon the paper. Shorten the string until the distance between the pencil and the tack is twenty-four and a half inches, and, using the same centre, draw another arc. Cut out the paper bounded by the two arcs, and after lapping the edges until you have a cone of the proper size pin them together and cut away the surplus paper, except a narrow flap to serve as a pasting edge.

Unpin the paper and use it as a pattern for the foundation of the shade itself. Fold the foundation into a cone and paste the overlapped edges. In order to hide the line of junction and also to conceal the shadow of the wire holder, paste narrow, vertical strips of plain chintz at proper intervals on the outside of the cone, and add a binding of the same kind at the top and at the bottom.

Chintz makes an excellent decorative material because the character and the variety of the patterns furnish all kinds of figures that can be cut out. The decorative scheme may be a ring of scarlet birds or a band of yellow butterflies or flowers gracefully arranged in knots or garlands. Geometrical figures placed in regular patterns afford a more precise decoration. There is no end to the pictures that can be made by combining various small figures into groups. Occasionally a scheme of decoration may call for a certain figure not easily to be found in chintz. In that case, cut the desired figure from a picture and use the pattern thus obtained to cut the real figure from plain chintz.

In applying the decoration, care should be taken to close the design where the two ends meet in such a way that the point of contact will not be apparent. Fixtures for holding the shades in place can be bought at little cost or made at home from wire.

ELIMINATING THE GUESS

THE following apparently mysterious way of discovering a person's age will amuse those who do not know the secret of it. Tell the person whose age you wish to find out to multiply the number of the month in which he was born by 2, add 5 to the result, multiply by 50 and then add his age. That is all he has to do.

From the figure that he gives you as his final result subtract 365, add 115 to the remainder, and, beginning at the right, point off two decimals in the total. The figures on the right of the decimal point will be his age, and the figure on the left of the point the number of the month in which he was born.

Suppose that the person whose age you wish to determine was born in April, and he is now 30 years old. Following the formula you have: 4 (April is the fourth month) $\times 2 = 8$; $+ 5 = 13$; $\times 50 = 650$; $+ 30 = 680$.

Those operations the subject of the experiment has carried out by himself, at your direction. Having the result, you complete the formula thus: $680 - 365 = 315$; $+ 115 = 430$.

Beginning at the right, point off two decimals, and you find that the person's age is 30, and that he was born in the fourth month, April.

Can you explain why the formula works?

SWEET SANDWICHES FOR LIGHT REFRESHMENTS

SWEET sandwiches are especially convenient on those occasions when you wish to serve light refreshments. They are economical, too, since they are best made of thinly sliced bread a day or two old, and require only a scant filling. Use brown or white bread, and slice it very thin with a sharp knife. If you use butter, cream it before you spread it, and be sure that it is not too salt.

Chop a cupful of ginger very fine and blend with it enough thick, sweet cream to make the mixture of the right consistency for spreading. Put the filling between thin slices of buttered bread. You can make another excellent ginger filling with preserved ginger and candied orange peel. Chop equal quantities of the two ingredients very fine, and add enough ginger syrup and orange juice to make the mixture spread well. Nuts and preserved ginger are another delicious combination. Chop the two together in equal quantities, and mix in a little light-brown sugar and cream to moisten the whole.

Cherry and almond sandwiches are delicious. Use equal quantities of almonds and preserved or candied cherries. Chop the cherries fine and pound the almonds into a paste; mix the two preparations, and add a teaspoonful of almond extract and a little cream.

Honey sandwiches, made by combining dates and raisins passed through a food chopper and by adding to each cupful of the mixture two tablespoonfuls of honey and one of orange juice, are unusually good. Chopped nuts, also, can be added with pleasing results. Another good sandwich is made by running dates and nuts through a food chopper—half as many dates as nuts—and adding to each cupful of the mixture a quarter of a cupful of maple sugar and a small amount of cream.

Quince jelly mixed with a few shredded mint leaves and spread on thin buttered slices of bread or stale sponge cake makes a sandwich of excellent flavor. Currant jelly mixed with nut meats also makes a good combination.

To make chocolate sandwiches, melt two squares of chocolate, and when the syrup is partly cool add one half cupful of brown sugar and two tablespoonfuls of cream. Flavor it with a teaspoonful of vanilla, and add chopped nut meats until it is of the right consistency. Use the mixture as a filling between very thin slices of bread or slices of toasted sponge cake or any loaf cake.

You can use marshmallows for sandwiches by heating them in the oven until they are soft. Another good filling consists of thick strawberry preserves into which you have worked a tablespoonful of pineapple juice and enough fresh grated coconut to make a paste.

When the sandwiches are made of bread they will be more attractive if you trim the slices carefully round the edges and cut them into squares, triangles, rounds, finger lengths or fancy shapes.

Chandler Price Must Advance \$200 June 30

The price of the Chandler Six becomes \$1595 on the first day of July. The present model, identically the same car, will be continued after that date. UNTIL THAT DATE THE PRICE REMAINS \$1395.

It has always been a basic part of Chandler policy to keep the Chandler price low

We have kept it low. Men considered the original Chandler price of \$1785 established four years ago an impossible price. Later when the Chandler Company reduced that price to \$1595 the trade thought we were courting disaster. Further reductions came as a positive shock to the industry. Meanwhile the Chandler business grew to front-rank proportions.

The Chandler car was never cheapened, but, rather, improved and refined from season to season until the whole motor car purchasing public has come to recognize that the Chandler car is a car of surpassing values.

We have sold the Chandler for hundreds of dollars less than cars of similar quality

Now, however, the Chandler price must be advanced.

It must be materially advanced to cover greatly increased costs which have arisen this Spring by reason of unprecedented conditions in the material supply and labor markets and in problems of transportation.

This is a condition which we cannot control. It is a condition which we must meet.

At \$1595 the Chandler car will still be under-priced. By test of any conceivable comparison this statement is a provable fact.

Now you can buy this great Six at \$1395 f. o. b. Cleveland.

While the \$1395 price holds, the demand will continue to greatly exceed our production, and we cannot guarantee deliveries

FIVE PLEASING TYPES OF BODY

Seven-Passenger Touring Car, \$1395 Four-Passenger Roadster, \$1395
Seven-Passenger Convertible Sedan (Fisher Built), \$2095
Four-Passenger Convertible Coupe (Fisher Built), \$1995 Limousine, \$2695
All prices F. O. B. Cleveland

CLEVELAND, OHIO

Cable Address: "Chanmotor"

Lift Corns out with Fingers

A few drops of Freezone applied directly upon a tender, aching corn stops the soreness at once and soon the entire corn or callus loosens and can be lifted off with the fingers without even a twinge of pain.

Freezone

Removes hard corns, soft corns, also corns between the toes and hardened calluses. Does not irritate or inflame the surrounding skin or tissue. You feel no pain when applying it or afterward.

Women! Keep a small bottle of Freezone on your dresser and never let a corn ache twice.

Small bottles can be had at any drug store in the U. S. or Canada

THE EDWARD WESLEY CO. Cincinnati, Ohio

DEAN ACADEMY, Franklin, Mass.

51st Year. Young men and young women find here a homelike atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment permits liberal terms, \$300-\$450 per year. Special course in Domestic Science. For catalogue and information address,

ARTHUR W. PEIRCE, Litt. D., Principal.

Young Men, Learn a Trade

The Pratt & Whitney Company has several vacancies in the Apprenticeship Course and would be glad to receive applications from young men who would appreciate an opportunity to learn a trade under very favorable circumstances. Courses are given covering the work of the Pattern Shop, Foundry, Machine Shop and Drawing Room, each including classroom instruction with the shop experience. Generous wages make all apprentices self-supporting. Athletics are encouraged.

Candidates must be at least sixteen years old, of good health and character, and having the equivalent of a grammar-school education. Address

Supervisor of Apprentices,

PRATT & WHITNEY CO., Hartford, Conn.

30 DAYS FREE TRIAL

and freight prepaid on a new 1917 "RANGER" bicycle. Write at once for our big catalog and special offers. Take your choice from 44 styles, colors and sizes in the famous "RANGER" line. Marvelous improvements. Extraordinary values in our 1917 price offers. You cannot afford to buy without getting our latest propositions and factory-to-retailer prices. Boys, be a "Rider Agent" and make big money taking orders for bicycles and supplies. Get our liberal terms on a sample to introduce the new "RANGER" line. Tires, equipment, sundries and everything in the bicycle line at half usual prices. Write Today. HEAD CYCLE COMPANY Dept. T-50, Chicago

How Can We Cut the Price but Not the Quality?

Quite a Question

—but our booklet on the New Companion Sewing Machine tells you fairly and squarely how we can offer this "first quality" family sewing machine, warrant it for 25 years, pay all freight charges to your nearest freight station, and sell at a large saving over the usual price.

Prove It for Yourself Our plan makes it possible for you to test the machine in your home for three months before deciding. If unsatisfactory we return your money and take back the machine at our expense.

WRITE TO-DAY for Trial Offer and Free Descriptive Booklet.

Owing to probable advance in price, due to war conditions, we advise an immediate application for particulars.

Perry Mason Company, Boston, Mass.

A SECRET WRITING CODE

SHERLOCK HOLMES himself would have found difficulty in solving a cryptogram written from the code described below. Unless a person discovers the key word he will be entirely baffled by the meaningless jumble of letters.

Rule a square sheet of paper into six hundred and seventy-six squares, twenty-six each way. Beginning with the upper left-hand corner square, write the alphabet across the paper, placing one letter in each square. In the second row, write the alphabet beginning with the letter B, and placing the letter A in the blank square at the right-hand end of the line. Do the same with the next line, starting with C and filling in A and B at the end. When you have done that correctly, the alphabet will appear in its regular order on the first horizontal line from left to right, and in the first vertical column from top to bottom, and the diagonal from the upper right to the lower left-hand corner will be a line of Z's.

Each party to the secret should have a copy of the code, and a key word should be agreed upon.

Suppose that the key word is "Charles" and that you wish to send the message "Wilson is elected" to one of your friends who knows the secret of the cryptogram.

On a separate sheet of paper write the message, and above it write the key word as many times as is necessary, thus:

Charles Charles C
Wilson is elected

On the top horizontal line of the table find the first letter of the key word, C, and on the left-hand vertical line the first letter of the message, W. From the letter C, bring your finger down the column, and from the letter W, bring your finger across. The letter where the two columns meet will be the first letter of the cipher, which in this case will be Y. Repeat this manœuvre with the second letters of the key word and the message, and so on until the cipher is complete.

To translate, the boy who receives the message places the key word, letter for letter, over the cipher that he has received. Then finding in the upper row of the table the first letter of the key word, C, he passes his finger down until he comes to the first letter of the cipher, Y; and the letter in the left-hand column on the same line will be the first letter in the translation. In the same manner he finds each of the succeeding letters.

A ROLLICKING TUB

WHAT is more commonplace and unromantic than an old-fashioned round washtub? Yet there are wonderful possibilities in it. A tub, two poles eight or ten feet long, and three two-foot pieces of a log about six inches in diameter make a boat that is—to say the least—out of

the ordinary. It may not break any speed records, but it will give more than its full measure of fun. Some small clothesline or heavy cord and a few large nails complete the list of materials, unless you wish to make the boat a sailing craft; in that case you will need a mast, a sail and spars.

The figure shows how simple the construction is. Fasten the pole B, which is eight or ten feet long and two inches in diameter, through the handles of the tub, A, so that it projects equal distances on opposite sides. Sharpen the two pieces of log D D at both ends, and nail them to opposite ends of the pole B. Then wedge the pole C under the pole B and allow it to extend a few inches over the front edge of the tub. Lash it to the pole B so that it extends behind the tub, as shown, and nail to the end of it the piece of log E, which also should be sharpened at both ends. To make the whole rigid, fasten guy ropes F F near the ends of the poles. If you use a mast, rest the lower end in a step nailed to the bottom of the tub, and lash it to the pole C halfway between the pole B and the forward end of the pole C. Guy ropes to the ends of the pole B and to the forward end of the pole C will help to hold the mast firmly in place.

Launch the boat at the bathing beach, man it with a trusty crew who have no fear of water, who are prepared to swim,—and expect to swim,—and you will not stop laughing until the cruise is over.

LIBERIA AND PHILATELY

THE postage stamps of the African Republic of Liberia were made in Germany. When the Entente warships blocked the coming of fresh supplies, Liberia was forced to surcharge earlier issues with new values. That was a legitimate measure to which collectors did not object, but the latest surcharges are so numerous as to convince stamp lovers that Liberia has prepared them with the deliberate intention of obtaining revenue at the expense of philatelists.

Had the Liberian authorities been content with placing a single new value upon a certain stamp, and having the surcharge appear uniform upon all the copies of that stamp, the new labels might have escaped suspicion. But instead,—taking for example the two-cent crimson and black stamp of the 1909 series,—the Liberian postal officials surcharged a sheet of one hundred stamps in ten different ways.

As the stamps were legitimately issued by a government, and some of them were used for postage, they will find their way into albums and catalogues, notwithstanding the fact that the "errors" were not the fruit of printers' carelessness. But the stamps will be unpopular in America and

probably less profitable in Liberia than their official makers anticipated.

CYCLE POLO

CYCLE polo differs from pony polo mainly in the dissimilarity of mounts and in the fact that the bicycle game requires no special training or expensive equipment. If you feel at home on a bicycle, you can get a great deal of fun out of cycle polo, and of course the more expert you are in handling your wheel and in using a mallet the better player you will be.

A SCRUMAGE AT CYCLE POLO

The field should be as level as possible and as nearly four hundred feet long by two hundred feet wide as you can get. Place at each end a goal consisting of two posts four feet high placed ten feet apart.

In cycle polo there can be no rule about the height of bicycles, as there is about that of ponies. The size of the rider must in every case decide that, as it does the size of the mallet, which should have a handle of such a length that when the player sits upright in the bicycle saddle and rests the head of the mallet on the ground his arm will hang down comfortably by his side. A croquet mallet sometimes serves the purpose excellently.

Wooden balls, light enough to respond to a hit, but not too light, are best for the purpose. Real polo balls can be used, although they are a little too heavy for the bicycle game. What are termed "practice balls," which come at one dollar and twenty-five cents a dozen, will serve. In fact, any ball that weighs three or four ounces is suitable. It should be white, so that it can readily be seen.

If everyone plays fair, there is little danger in the game. A player who runs into another at right angles should be ruled off the field for the rest of the period. The same penalty should be meted out to any player who tries to unseat an opponent. Those two offenses are fouls, and each counts half a point against the side that commits them.

Four players on a side is the best number. The game is divided into eight periods of five minutes each. Two minutes are allowed between periods. At the half, or end of the fourth period, there is a recess of ten minutes, or less, at the pleasure of the captains. At a signal of the referee all playing stops, whether a goal has been made or not.

For cycle polo one person usually acts as referee, timer, umpire and scorer. It is an exacting job, for the person who fills the combined offices has to be constantly riding from one goal to the other and watching the players.

For a backhand stroke, do not strike as hard as you can, if you are going fast. Accuracy must be your object. With a hard stroke you are likely to wrench your elbow, besides missing the ball.

If you wish to hit the ball so that it will go straight back, you must hit it when it is about a foot behind your knee. If you wish it to go to the left rear, and you are striking behind your back wheel, you must strike at right angles, and turn a little to the right, if you have time, so as not to strike your wheel.

If you want to strike a ball to the right rear, get it in front of your knee. You can pass it on to a comrade, even if you fail to make a long shot.

Those strokes are backhanders. The other kind of stroke is called the forward stroke.

A straight forward is made by riding up to the ball and hitting it when it is about a foot in front of the right knee. The right front is the most difficult forward stroke. To make it successfully, you must hit the ball when it is a trifle behind your knee.

A stroke on the left side, or almost in front, is good for stopping a ball that is going into your goal. You hit it nearly at right angles from directly in front of your front wheel. If you have time, you can save yourself from being unseated by turning slightly to the left while you make the stroke.

The players are No. 1, No. 2, No. 3 and No. 4; the diagram shows them in position at the beginning of the game. The teams line up in the middle of the field, each on its own side of a straight line. The referee, R, throws the ball in, as indicated by the dotted line, and the game begins.

The only terms used by the players are, "Leave it," which means leave the ball, as some one else has a better chance than you have to earn the goal; and "Backhand here," meaning a backhanded stroke. Such ambiguous advice as "All right," which may mean any one of several things,

receives little attention in a game. Do not get into the habit of using it.

No. 1's chief duty is helping his team mates to score; he seldom makes a goal himself. He must be a quick man, able to ride down the enemy, and hinder them from taking the ball. Thus he leaves the ball at the disposal of No. 2 or No. 3. He stays in the rear and makes things generally uncomfortable for the opposing forces. He gets in the way and pushes, and takes up space that the enemy would like to have.

No. 2 has the most independent position on the team. He corresponds to the rover in hockey. He should be a good rider and able to hit hard. He

must be able to hook the ball from the very mallets of the enemy, so that he himself may have a fair hit. No. 3 and No. 4 usually pass the ball on to him. He then has to ride fast, hit the ball and try to earn a goal. No. 3 has excellent opportunities for bringing the ball clear down the field by fast riding and hard hitting. He also helps to fight off No. 1 of the opposing side.

No. 4, usually captain of the team, is the goal keeper. Yet, if he is a fast rider, he will be able to keep in the game most of the time. He is behind all the players, able to see their opportunities, and privileged to advise them by calling out "Leave it!" and so forth. He does not ordinarily concern himself with taking the ball and making for the opposite goal, but contents himself with giving it a smart rap, which sends it safe to one side and away from his own goal.

A goal counts one, and a foul counts a half goal for the opposing side. The side having the most goals of course wins the game.

The Editor of the Boys' Page will be glad to answer any questions about the game.

A "KLEPALO"

A CAMP cook, whose only means of calling the members of his party was pounding on a pan with a knife handle, was unable to make them hear when they were fishing or hunting at any considerable distance from the camp. One of the party, to whom he complained, thereupon made what he called a "klepalo."

The "klepalo" was merely a piece of well-seasoned oak plank, two inches thick, six inches wide and four feet long.

Through the centre he bored a hole, passed a rope through it, and suspended the plank from the branch of a tree, as shown in the illustration. The cook "rang" the instrument by striking it with a mallet, first on one side and then on the other.

The man who made the "klepalo" had seen similar contrivances in small Bulgarian villages, where they are used instead of church bells to call the people to worship.

A test of the instrument used by the campers showed that, in ordinary weather conditions, it could be heard two miles.

NEW STAMPS IN CHINA

THE Far East has recently undergone a postal revolution that has brought into existence several new issues of stamps. Chief among them is one for Great Britain, whose current stamps have hitherto been valid for use through the British postal agencies in various parts of China, just as those stamps pay postage to-day from England to any place in the United States.

The Chinese government, for reasons not yet disclosed to American philately, objected to English postal methods; and the outcome is that the stamps of Hongkong, a British colony since 1842, have been surcharged with the word CHINA in black, sans-serif, capital letters. These stamps supersede the ordinary British postal labels, and the rates now charged on mail are those that prevail in the Chinese postal system, with the cent and the dollar as the monetary basis instead of the penny, the shilling and the pound. The new British Hongkong overprints are in denominations of two, four, six, eight, ten, twelve and fifty cents; and of one, two, three, five and ten dollars.

The stamps of Russia in China have hitherto been Russian issues surcharged, but without any overprinted value to take the place of the kopeck and ruble values. A new series has now appeared with a surcharge that provides dollar-and-cent denominations.

As early as 1895 Germany adopted Chinese currency rates for German stamps in China, and France introduced the system early in the twentieth century.

It remains to be seen whether Japan, which is powerful in China politically and in a military

sense, will consent to follow the example of the other four powers that have Chinese postal agencies.

A BOY'S RANGE FINDER

RANGE finders—instruments that make it possible to determine the distance of a more or less remote object without approaching it—are used most extensively in artillery fire, where, in order to aim the guns properly, it is necessary to know the distance to the enemy's position; but their use in everyday life is amusing and instructive. How many times on a cross-country "hike" have you not wished to know the width of a river or the distance to a column of smoke?

The materials for a simple but effective range finder, such as any boy can make, cost less than seventy-five cents. The instrument is based on the laws of the reflection of light and on triangulation.

At a store where drawing materials are sold, buy a brass protractor of six-inch diameter. Solder an ordinary pin at the 15° mark (Fig. 1), and nip off the point; then solder a second pin at the exact middle of the straight edge. Next cut out a piece of tin or brass one and three quarters inches long by one half inch wide, and make a right-angled bend a half inch from one end. Cut a slit in the long side one inch long and one sixty-fourth of an inch broad, and then solder the short side to the protractor, as shown in Fig. 1, so that the slit stands over the 165° mark.

Now cut a short rod of hard wood three quarters of an inch long, and burn a hole through the centre of it from end to end with a red-hot needle slightly smaller in diameter than a pin.

With a glass cutter cut a strip of good mirror glass one half inch wide and three inches long, and, with sealing wax and a strip of court-plaster, fasten it to the little rod of wood. Slip the rod down over the pin soldered at the centre of the protractor, and cut off the protruding point. See that the mirror faces toward the slit. The range finder is now complete.

Fig. 2 is a plan view drawn to make clear the method of using the instrument. Set the mirror strip

so that its silvered surface crosses the 45° mark. Turn the left shoulder toward the object, P, the distance to which you wish to determine. Hold the protractor at the level of the eyes and, with the left eye close to the slit, look through it into the mirror, moving the protractor *as a whole* until the image of P reflected in the mirror falls directly in line with the pin soldered at the 15° mark. Then, glancing over the top of the mirror strip, notice some object in the landscape that is also in line with the pin. Suppose that it is a tree or a bush at Q, perhaps several hundred yards away. Now walk one hundred paces, as indicated by the dotted line D, directly toward Q, put the protractor slit again to the eye, sight the pin upon Q, and *rotate the mirror strip* toward the 90° mark until the image of P is made to fall again in line with the pin and with Q. Read the angular position of the silvered back of the mirror strip, and then, to obtain the number of paces that the object, P, is distant from the first observation station, refer to a copy of the tables appended to this article.

Suppose that you find the reading to be 49.2°; you must then *subtract* from seven hundred and twelve a quantity equal to two tenths of the difference between seven hundred and twelve and five hundred and sixty-seven, which leaves six hundred and eighty-three paces as the distance you wish to determine.

Sometimes it is inconvenient or even impossible to walk one hundred paces toward Q. If you walk a known portion of one hundred paces before you take an observation on an object, you must multiply the range values in the tables by that fraction. For example, if you find a mirror reading of 49.2° after walking only twenty paces, then your new range is only twenty one hundredths, or one fifth, of the table value of six hundred and eighty-three, computed above; in other words, the range is one hundred and thirty-six and three fifths paces.

To measure with this range finder the distance of an object about a mile away, the two observing stations should be two hundred paces apart; for two miles, four hundred paces; for three miles, six

hundred paces, and so on; otherwise the angular movement of the mirror will be so small that you cannot read it accurately. The ranges, as given in the tables, must then be multiplied by two, three, four, and so on, as the case may be.

If you have learned to take the regular army marching pace for double time,—thirty-six inches,—you can determine the ranges directly in yards; otherwise you must know the length of your natural stride before you can reduce the ranges from paces to yards.

New uses for the range finder will occur to you every time you use it. You can find the distance of a storm cloud by taking observations quickly upon some prominent and distinctive mark of the cloud. You can use it to determine, say, the height of a tree top above the level of the eye, where P of the diagram is the top of the tree and D the horizontal distance of the second observing station from the first station at the foot of the tree; in this instance the protractor is held vertical. As an aid in holding the protractor straight, weight a string with a small stone and hang it from the 90° mark

This Delightful Bran Dish

In magazines and newspapers, countless authorities are urging the use of bran.

It is Nature's laxative.

You need it daily, so make it a likable dish.

Pettijohn's is a dainty which everyone enjoys. Thousands of doctors advise it on that account.

Try it one week—note its effects. Then you'll never go without it. Start tomorrow morning.

Pettijohn's

Rolled Wheat—25% Bran

A breakfast dainty whose flavory flakes hide 25 per cent unground bran.

Pettijohn's Flour—75 per cent fine patent flour with 25 per cent bran flakes. Use like Graham flour in any recipe.

Both sold in packages only. (1605)

down past the pin on which the mirror pivots. If the mirror is set at 67.5°, then, when you have walked to a point where you can see the tree top in the mirror in line with the sighting pin, the distance from the foot of the tree will be exactly equal to the height of the top of the tree above the level of the eye.

♠ ♠

A ONE-HAND CLOVE HITCH

To tie a clove hitch with two hands is simple enough. But can you do it with one hand? Not many persons are able to do the trick even after seeing it done several times, unless the secret has been explained to them.

Fold a piece of soft cord in a single loop and give the loop a half turn to the right (Fig. 1); next bend the loop back, as shown in Fig. 2. Now put your forefinger through opening X, and pass it under the intervening cords and up through the opening Y.

When you have drawn the cord taut, you will have made your clove hitch. (Fig. 3.)

ORDERS

"EUGENE," said Mr. Mehaffie, "pile the wood in the woodshed on the side next the barn. You'd better do it this morning."

Eugene went to the woodshed as his father went off to work. He did not object to piling up wood. He was not at all lazy, and there was nothing in particular to do that morning; so he whistled as he carried the wood in, armful by armful. Then he looked round the shed.

"Pile it on the side next the barn," his father had said. There was no reason at all for that, and it meant more steps; so Eugene piled the wood on the side next the door. He was very painstaking.

At noon Mr. Mehaffie came home in a little electric automobile. He tried to run it into the woodshed, but the wood stuck out several feet and prevented him from getting in.

"Eugene!" he cried. "I thought I told you to pile the wood over there!"

"I didn't think it would make any difference."

"It does. I am to have the use of the Hamiltons' car while they are out of town. The woodshed was where I planned to keep it."

"I didn't know—" began Eugene. He was already throwing the wood across the shed.

"I told you what to do. You should learn to take orders without always knowing why."

But that was just a home episode, and the lesson did not sink deep into the boy's consciousness. He had similar experiences all the way through school. In spite of his good mind and his willingness to work, the teachers found him annoying. It was difficult for him to obey orders exactly; in his own mind he could always see a better way. But he had no serious difficulty until he went into the high school. He was taking his first year's work in chemistry. Dr. Raubens gave them instructions for the arsenic test.

"On no account must the hydrogen be lighted until it is certain that all the air in the generator has been driven off," he said to the class. "Collect the gas in small quantities and test it away from your bench. It will require twenty minutes before you can make the final test at the generator."

Eugene timed himself. "Fifteen minutes—sixteen." There was only a faint "pop" when he had made his test after twelve minutes. "I guess it will be all right now," he thought, "and I am tired of waiting."

He touched a match to the nozzle of the generator. Something exploded like a bomb. The generator flask was splintered, and the hot acid ran over his hands and burned them like fire, and ate into the sleeves of his coat.

In college Eugene took the engineering course. His work was good, and the instructors used their efforts to get him a position. He went to one of the big offices of a railway. His superior officer, the chief clerk, was a man of few words who gave his orders without unnecessary explanation.

"Let the Queen Run bridge work go and compute these," said the clerk, coming in one morning from his office and handing the data to Eugene.

Eugene looked them over. They were mere fragments in construction work. He could do the whole thing in two or three hours. At present he was in the midst of the most difficult part of his bridge work. He would finish up the one difficult point, and take up this new piece of work when he came back from luncheon.

He finished his computations and went out to luncheon. When he came back at two o'clock, he found the chief clerk, the master mechanic and the chief engineer at his desk.

"I was just about to begin them," he said.

An unpleasant scene followed. There had been a wreck of one of the flyers, and a viaduct had been so badly shaken up that reinforced concrete must be put in before trains could use it. Meanwhile they were making a detour of twenty miles. The construction crew were to go out on a two-o'clock special. They were waiting for those drafts.

"I could have had them done an hour ago, if you had told me they were important."

"I don't ask questions!" roared the chief clerk. "I obey orders as they come in, and that is what every man in my office will do."

It delayed Eugene's promotion; it nearly cost him his position. But it will take a long, long time for him to learn his lesson.

BLUE STREAKS

TRADE MARK REG U. S. PAT. OFF.

The big league baseball pitcher is a specialist. Constant practice at pitching brought him his skill and success. That is concentration.

In manufacturing likewise, it pays to concentrate. Making one brand of bicycle tire—and making it well—is better than making a great many brands.

Goodyear Makes Only One Bicycle Tire That Means Better Tires Cheaper

Do you know why bicycle tires have been costing you too much? And why they have not been good enough? It is because manufacturing and selling costs have been too high.

In putting out the Blue Streak Bicycle Tire at \$3.25 each, Goodyear struck at the heart of this condition. The Goodyear Blue Streak represents a welcome square deal for the bicycle rider. It is a big, honest value at a fair price.

Instead of making a great many brands Goodyear concentrates on this one high quality tire—the Blue Streak. This single manufacturing standard saves factory costs. The money saved goes into making better tires cheaper—for you.

This one standard tire is sold direct to the Goodyear dealer, saving extra selling profits between the factory and you.

The Goodyear Dealer in your town will sell you Blue Streaks. He is your friend. See him. Or write The Goodyear Tire & Rubber Company, Akron, Ohio, for his address.

Boys everywhere are wearing Goodyear Bicycle Caps. Ask your dealer. They're specially popular with Bicycle Clubs—name of club printed on the cap.

Rugged Tires Wear Long

Goodyear Blue Streaks are loyal on your bike. Boys say they wear "like iron." There is long wear in the tough two-ply tire body, stout and durable. The treads are of strong rubber blocks with two stout reinforcing strips of fabric under the tread to guard against punctures.

No Side-Slipping on These Tires

A Goodyear Blue Streak is a stranger to dangerous side-slipping. It has a real non-skid tread made of sharp-edged blocks of rugged rubber. These press together and bite the ground, in travel. Press on a Blue Streak tread. You can feel the bite.

Springy Tires Pedal Easy

Added to Blue Streak durability is resilience. Fine, light fabric, strong but active, goes into them. The two-ply tire body rests in springy rubber. This makes Blue Streaks quick and elastic. Pedaling becomes fun on such tires. They are so easy to push.

Blue Streaks Are Handsome Tires

Every rider wants good-looking tires, too. Goodyear Blue Streaks are handsome, to match the fine quality built into them. Your friends will notice how your wheel is improved. They are bright and snappy with the clear Blue Streaks along the side.

GOOD YEAR

AKRON

Ask any questions you wish about the contents of this page. They will be gladly answered.

The FAMILY PAGE for JUNE

Address your letters to THE EDITOR OF THE FAMILY PAGE, THE YOUTHS COMPANION, BOSTON, MASS.

THE GROWING-UP GIRL

SHE lives in the same street with most of us—the growing-up motherless girl who does not seem to be anyone's especial charge. People say that she is a little too easy in her manner; that she spends too much time in the street; that she puffs her hair more than is in good taste. She has a father, or an aunt, or some one who provides her with clothing more or less suitable, and who sees that she is in school with some show of regularity and has nourishing food; so it is not like a charity case. What can be done without seeming to be officious?

One woman, a tired, busy woman, was thoughtful enough to smile at that girl in her street. She invited her in to supper occasionally. She has taught her various accomplishments in needlework and interested her in holiday preparations. She has given her the best sort of reading for her maturing mind. She has not criticized or lectured or offered unsought advice, but she has gained the girl's confidence and affection.

Is there anyone who could not do as much as that for the growing-up motherless girl in her own street?

TO PROTECT CURTAINS AT NIGHT

WHAT to do with the lace and other curtains in your bedroom on a rainy or windy night when you wish to open the windows is often a problem. The following simple device prevents them from blowing out and getting wet or dusty, and also holds them back so as to allow ample ventilation.

Cut out a piece of white cotton cloth about one and one quarter yards long by three quarters of a yard wide, turn a hem on all four sides, and sew three or four little brass rings on each of the longest sides. Then put three or four little brass hooks just round the side of the window casing in positions to correspond with the rings on the cloth. At night fold the cloth round the lace curtain or drapery and attach it to the hooks by means of the rings. That draws the curtains back and covers the lower part of them so that they cannot be injured by sudden showers, fog or dust.

A PET SHOW

A SURE way to interest the children of a neighborhood and at the same time to teach them a wholesome lesson is to arrange a show of pets. Invite every boy and every girl who has a pet to bring it. Put no restrictions on variety or species, and send special invitations to the children who have no pets. Let the motto of the show be, "The more, the merrier." The community playground or any wide lawn will serve for an exhibition place.

It is better to make no effort either to classify the pets or to judge them. A blue ribbon for every entry will please the children more than awards that discriminate.

The average community will produce an astonishing variety of pets—puppies, kittens, parrots, canaries, turtles, rabbits, chickens, goats, and other creatures less common but no less dear to those who own them.

In such an exhibition the performing of tricks by those of the pets that have been trained to them will be one source of interest; but the chief value of the show will be the lesson that it teaches: affection for all the creatures that put their trust in man.

HOMEMADE FLOUR AND MEAL FOR WAR-TIME USE

THE gristmill with the ponderous millstones that used to grind the wheat and corn that the farmer raised for his home supply has gone; the great modern flour mill has taken its place. But the huge wheels and rollers have not wholly conquered, for many persons who cannot forget the good old-fashioned flavor of the gristmill products, and who wish to make their war-time economies as agreeable as possible, have set up little grinding machines in their homes, and are making their own meal and flour.

The persons who run their own gristmills gain two things: first, a reduction in cost that is apparent when you compare the market price of fifty pounds of wheat with the market price of the same weight of flour; and second, the satisfaction that comes from producing a food that has the real homemade flavor.

The equipment may be merely a coffee grinder and a sieve. A small mill that screws to a table and operates by a hand crank costs about four dollars. The hopper allows the grain to descend against a screw-shaped shaft that forces it against grinding disks of corrugated metal. A screw and lock nut regulate the fineness. The larger and more expensive mills operate on the same principle.

Sieves of four sizes of wire, Nos. 6, 12, 24, 40, are desirable parts of the equipment. They cost little and enable you to obtain a variety of products from each kind of grain. The number of the sieve wire represents roughly the number of meshes to the inch. Brass wire is preferable to iron wire, particularly in the small sizes, because fine iron or steel wire is very susceptible to rust. The flour adheres to this rust and soon clogs the mesh.

Wheat, corn, rye, buckwheat are all good raw products for the home mill. If you raise them yourself, so much the better; if you purchase them, be sure that you get the best grade. Before putting them in the hopper, winnow or fan out the chaff.

For the first grinding set the mill so that it just breaks the average size. By sifting the product you can get a pleasant breakfast food that will

give variety to the morning meal. Finer grindings will give you flour for bread.

All grains have similar elements of structure. There is first the outer coat of protection, bran in wheat, the dark nutshell in buckwheat; next, the hard shell, yellow in flint corn and brownish in wheat and rye; third, the white powdery part that is the first food for the germ, which is the fourth element. By using the sieves after each grinding you can, if you wish, roughly separate these elements.

The first breaking of the wheat will give a small amount of very fine and delicate white flour, considerably more outer coat, or bran, and a still larger quantity of coarse, hard, broken grain—the old-fashioned cracked wheat that was often used as a cereal. Further grinding produces more flour and reduces the whiteness, but adds, some persons believe, to the flavor and the nutritive value. Grinding all of the wheat together so finely that it needs no sifting is the original method recommended by Dr. Graham; it gives a product that makes excellent bread. Half whole wheat and half whole rye also makes an excellent bread flour.

Flint corn is a hard nut to crack and requires much sifting, but it pays well in flavor for the labor it requires. The longer you grind it the more of the hard part is broken up and the more golden the meal becomes. The very coarse yellow meal may be retained on a No. 12 sieve. It requires long cooking, but produces a delicious golden hominy full of flavor.

The seed germ of flint corn is easily recognized. It is a flat little dark-colored bag at the pointed end of the kernel where it joins the cob. The seed germ in all grain contains oil, and consequently is a source of distinctive flavor. It is also the cause of the flour or meal turning sour in time. It may be that the great commercial mills separate it on that account as well as for its value as a by-product. The miller in his own castle may keep the germ in his meal, since he grinds in step with his own consumption, and may thereby enjoy the full flavor and fragrance of the grain.

Buckwheat, the easiest of all the grains to grind and sift, lacks gluten and cannot be made into bread, but it makes delicious griddlecakes, muffins and johnnycakes. Set the grinder so that it cracks the smaller sizes, and the flour will come out fine and in large quantities. The outer coat of the buckwheat separates easily, and the greenish inner shell that may be retained on a No. 24 sieve makes an interesting breakfast cereal.

In the great modern flour mills the wheat once broken is divided into many different products, and the best grades of flour are made by careful blending. The amateur miller of course cannot rival them with home grinding when the lightness and aerobatics of pastry cooking forms the test. But those who take delight in fruit and vegetables from their own soil, planted, cared for and harvested under their own eyes, will appreciate also the subtle flavor in their bread, muffins, griddlecakes and waffles made from their own grain out of their own grinding.

AN ANIMATED PAPER BIRD

TO make this surprising bird, cut out an eight-inch square of thin, tough paper, and crease it sharply, as indicated in Fig. 1. The diagonals, C C, and the short folds, A B, should be ridges; A A and C A, made by folding the side of the square to meet the diagonal, should be depressions. A A must be exactly five inches—two and one half inches on each side of the centre.

Bunch the four corners, C C C C, together, keeping the folds straight, and the paper will take a dart-like shape, as shown in Fig. 2. Fold the front point C downward, across the line A A, and do the same with the back point C. In that way you will make an exact lozenge or diamond-shaped figure. Fold the points A A together, both back and front, and the paper will take the shape shown in Fig. 3.

Holding the paper firmly at point O, pinch the leg at N, and lift it beyond P to form a double fold. Lift and fold the other leg in the same way, as shown in Fig. 4. Fold the angle R, both front and back, downward across the line T T. Turn the figure upside down, and you have Fig. 5.

You now have only three more things to do: first, reverse the fold at Y and turn it in on the dotted line to form the beak or head; then put in pencil dots for eyes, and finally, holding the bird at X with the right thumb and finger, twist the wings, W W, downward with the left hand, as if rolling a cornucopia. The bird is now complete.

Fig 2

Fig 4

Fig 3

Fig 5

The remarkable thing about it is, that if you pinch the bird firmly by his breastbone and jerk his tail he will flap his wings vigorously.

LAW FOR THE FAMILY

I. The Law in General

EVERYONE should know how the law has marked out his rights and duties. He will not find the study dry. The law has well been called the perfection of reason. Its premises change from age to age as the conception of the

IN THIS ISSUE The Companion begins the publication of an important and valuable series of articles, Law for the Family. It is a careful, authoritative, yet simple treatment of various principles of law that every member of the family, from the father and mother to the boy or girl of twelve to fifteen years, can and should understand. Among the articles to come are papers on Contracts, Agency, Bailments, Husband and Wife, Parents and Children.

function of the state changes, but from given premises the deductions of the law are inevitable. No idea is more erroneous than that law is uncertain or indefinite. Technicalities and formalities that sometimes seem arbitrary and meaningless, and that appear to be cruel in their application, will nevertheless be found to rest upon a consideration for the good of society.

You must remember, however, that only the general principles of the law are common to all states. Although the common law of England is the source of all our statutory law except that of Louisiana and some statutes in other states that still show early Spanish influences, there are, nevertheless, essential differences. You should, therefore, read the statutes of your own state; or, better still, in a specific case, if the matter is important, consult a lawyer. These articles can hope to cover only fundamental principles.

The general field of the law may be divided into five branches: contracts, torts or private wrongs, criminal law or the law of public wrongs, real estate, probate law. The peculiar rules that affect real estate and probate law, except as they are determined by contract law, are distinctly technical, and differ materially in different states. Consequently, these articles will omit those two branches. Criminal law will have but little interest for the family, since the essential element present in every crime is wicked intent. A man does not steal or kill without intending to do so. The law is merciful in searching for intent, and demands proof of a deliberate purpose to violate the criminal code.

In the other branch of the law of wrongs, however,—the law of torts or private wrongs,—a wrongful intent is not a necessary element. For example, if on a Fourth of July a boy should explode firecrackers near a restless horse and the horse should run away and damage the buggy to which he was hitched, the boy will have committed a tort against the owner of the buggy, and the owner can recover damages from him. It is true that the boy did not intend to injure the buggy; nevertheless, the law holds him responsible for the consequences of his foolish action. Or, to use another illustration: suppose that Susie Jones finds on the street a necklace that belongs to Mabel Smith. If Susie knows that the necklace belongs to Mabel and converts it to her own use, she has a wicked intent, and therefore her act is larceny—stealing. If she does not know that it is Mabel's, but uses it, she is not guilty of a crime. But in both cases she is guilty of a tort, and Mabel can recover the necklace or damages for having been deprived of its use.

If crimes be defined roughly as breaches of the community duties that are enjoined by the decalogue, torts may be roughly classified as breaches of the golden rule. Anyone who makes that supreme law his rule of daily conduct need not be concerned about the torts that he may commit. The line between crimes and torts is determined, then, first, by the presence or absence of wicked intent, and second, by the answer to the question whether the wrong is against society or against an individual. For an act amounts to a crime not primarily because it is a sin, but because it harms society. In fact there may be no moral wrong involved; but if the act can be regarded as hostile to the best interests of society, it may be prohibited. A single act, however, may embody both wrongs, and the offender may therefore be liable criminally for the public wrong and civilly for the private wrong. For example, stealing is an offense against society, and Susie Jones could be indicted for larceny, as bailie—a term to be explained later—if she found Mabel Smith's necklace and kept it when she knew it belonged to Mabel. She would also be liable in tort to Mabel for its value. If she did not know who owned the necklace, the intent to defraud would be lacking and the element of crime would disappear. To use a more obvious illustration, if no city or state had ever passed ordinances or laws against reckless driving of horses or automobiles, and Jennie Murphy injured Mary Morton by recklessness on the highway, Jennie would still be liable to Mary. But if there were laws against speeding, the crime or misdemeanor that Jennie committed against the city or the state by breaking the law, would be added to the tort that she committed against Mary.

The last-mentioned case illustrates the severe logic of the law. Wicked intent is an essential element in every crime. Anyone might argue that,

since Jennie did not intend to hurt Mary there was no crime. But the essence of the crime was not in the injury to Mary, but in the fact of driving in a manner forbidden by law. Jennie would be as liable to Mary for the injury caused by reckless driving before the passage of the law as afterward; but unless her act were specifically forbidden, she would not be liable to the city or to the state.

To speculate a little further: suppose that the language of the act were, "No one shall recklessly drive an automobile," and so forth. Anyone could argue that as Jennie did not intend to drive her automobile recklessly she is guilty of no crime. The law would reply, "If, in fact, she did drive her automobile recklessly, the intent to do it must be presumed. On the other hand, if by an accident she lost control of her automobile, the intent would be lacking and she would be guiltless."

Even though the act complained of is not in itself wrong, it may constitute a tort. A lawful act done negligently may be actionable. A familiar example is building done so carelessly as to cause unsafe construction. It is lawful for a contractor to erect a building and to pile his materials near his work. But if he dumps a load of bricks on a highway and does not protect the traveler by placing warning lights there at night, or guards by day, he is liable in tort to anyone who is injured by stumbling over the pile.

Often mere inadvertence and sometimes mistaken kindness results in an act that amounts to a tort. For example, suppose Maud Johnson gets behind in paying her board. Her landlady is insistent, and Maud borrows the amount she owes from a friend and leaves with her as security a ring, which the friend is to hold until Maud repays the loan. The friend sells the ring for more than its intrinsic value, repays herself for her loan, and turns the balance over to Maud. To her cost, the friend finds that the ring belonged to Maud's dead mother, and before that to her grandmother. Maud can insist upon having her ring returned to her upon repaying the loan. She can proceed in tort for the ring, not against the purchaser, who would have a good title if he knew nothing of the conditions, but against the friend. If the friend were forced to pay a bonus in order to get the ring back, it would be her own loss. If she could not return the ring itself, she would be liable to Maud, not only for the actual money value of the ring, but—since the law recognizes the values created by sentiment and association—for the sentimental value besides.

To be sure, it is a hardship that the friend is made to suffer for a kindness, but the law answers, "Either Maud or the friend must suffer. In heart both are alike innocent. That being the case, the one whose act caused the damage must suffer."

One of the essential elements of a tort is that it violates a duty due to every person, irrespective of any particular relationship that may exist. Certain relationships, however, are followed by peculiar and limited obligations. For example, a father owes a duty to his daughter that he does not owe to his daughter's most intimate friend. An agent owes an obligation to his principal that is different from the obligation that he owes to others. Such respective rights and duties are determined by the contract—express or implied—between the parties. The essence of a tort lies in the fact that it is a breach of a duty—perhaps a duty of which the person may be unaware—imposed by law, generally. A contract creates rights and duties between the parties to it, that do not belong to other members of society.

THE COMPANION RECEIPTS

These receipts are gathered from original sources in America and Europe, and are fully tested.

SOME WAR-TIME RECEIPTS

HERE are a few samples of the war-time receipts, mentioned on the editorial page of this issue, that are being put forward in Great Britain by various food-experiment agencies. With our own country at war now, these receipts may have value as well as interest for Companion readers.

How to Make Butter Go Further.—Melt half a pound of butter in a bowl and add a cupful of Pasteurized milk. Beat with an egg beater until the mixture becomes solid. This will yield eleven or twelve ounces of butter. Butter that is too salt can be made to taste more like fresh butter in this way. The milk that is not beaten in may be used for cooking.

Marmalade.—Peel, core and cut up six apples; slice six bananas; cut four lemons into thin slices, removing pits; cut up the pulp of six oranges, and add the outside peel, thinly cut, but not the white part inside. Put all the fruit into a pan, add four quarts of cold water and boil four hours. Then add three quarters of a pound of sugar for every pound of fruit, and boil until it jellies—about three hours.

Peanut and Rice Croquettes.—Melt a tablespoonful of butter and stir into it one cupful of boiled rice, one half cupful of mashed potato and one quarter pound of peanuts chopped fine. Let the mixture heat a minute, and then spread it on a plate to cool. Make it into balls, roll them in browned crumbs, heat them in the oven and serve with a good thick sauce made with either meat or vegetable stock.

Cheese and Rice Batter.—Make a batter of one cupful of flour, one egg well beaten and one half cupful of milk. Beat it thoroughly and set it aside for at least half an hour. Then add one half cupful of boiled rice, one half cupful of milk, one half teaspoonful of baking powder, four tablespoonfuls of grated cheese, one half teaspoonful of salt and a dash of Cayenne pepper. Mix well, put into a buttered baking dish and bake in a hot oven twenty to thirty minutes. This must not stand after it is taken from the oven.

Vegetable Hot-Pot.—Cook two carrots, one medium-sized turnip and two onions in boiling salted water for twenty minutes. Slice them, add six tablespoonfuls of canned tomato, and arrange the vegetables in a baking dish, sprinkling salt and pepper and a little cooked hominy, rice or farina over each layer. Half fill the dish with tomato juice, and arrange a layer of potatoes, boiled three minutes and sliced, on top with the slices overlapping. Dot over with small pieces of butter or dripping and bake two hours in a moderate oven, or until the potatoes are soft and browned.

She Couldn't Go; Her Corns Wouldn't Let Her

She remembered the agonies of the last dance. It kept her at home to coddle her touchy corns. She simply couldn't face the pain again.

How easy it would have been, what instant relief, if she had only known of Blue-jay. Blue-jay stops pain instantly. And the miserable corn is gone, roots and all, in 48 hours.

New shoes—smart styles—have no terrors to Blue-jay users. These, soothing plasters, inset with a medicinal wax, have ended millions upon millions of corns.

Driver Agents Wanted

Drive and demonstrate the Bush Car. Pay for it out of your commissions on sales. My agents are making money. Shipments are prompt. Bush Cars guaranteed or money back. Write at once for my 48-page catalog and all particulars. Address J. H. Bush, Pres., Dept. 602, BUSH MOTOR COMPANY, Bush Temple, Chicago, Illinois.

114-in Wheelbase Delco Ignition—Elect. Stg. & Ltg. QUAKER STAMP CO., Toledo, Ohio.

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

PROTECTION AGAINST INFANTILE PARALYSIS

ALTHOUGH it is generally believed by those best qualified to judge that there will be no such epidemic of infantile paralysis this summer as that which afflicted so many parts of the country last year, it is quite certain that there will be occasional cases, just as there are every year. In order that those isolated cases may not become centres for the spread of an epidemic certain precautions will be necessary. Those precautions were formulated at a recent conference of state boards of health in Washington.

Acting on the theory of contagion, which seems to be quite well established, the conference urged that all sick children be isolated for a period of at least two weeks, but not more than three weeks, and that all other children in the same household be isolated for fourteen days from the last time of contact with the sick child. Adults in the household not in contact with the patient may go to their work as usual, provided that work does not bring them in contact with children.

All discharges from the nose, throat or bowels of the sick child should be promptly disinfected; the nurse or mother who is in charge should wash her hands with soap and hot water immediately after handling those discharges and also whenever she leaves the sick room for any purpose.

After the child has recovered and before he comes in contact with any well person, his entire body and his hair should be thoroughly washed, and the disinfecting, airing and sunning of the sick room should be carefully attended to. The windows and doors of the sick room, and, if possible, the bed as well, should be well screened, so that no flies or other insects can have access to the patient or to his bodily discharges. Household pets should be absolutely excluded from the sick room.

The report of this conference dealt only with the means of preventing the spread of the disease from a known source of infection; we do not yet know just how to protect a child against an original infection, for we have not learned exactly how the virus of the disease enters the body. As a precautionary measure, however, any child who has a cold, with a sore throat and discharge from the nose, should be kept at home (although not indoors if the weather is good), since, if contagion does come through the nose and throat, the danger is greater when the mucous membrane of those parts is inflamed. The same care should be taken in case of indigestion or any stomach or bowel complaint, for many think that infection enters through the digestive tract. If a child is feverish, put him to bed and call a physician without delay.

AUNT NANCY

AUNT NANCY, the youngest of twelve children,—seven sons and five daughters,—named herself. She was ten years younger than Isaac, her youngest brother, and twenty-five years younger than Benjamin, her oldest brother. When she was born her parents declared laughingly that they were out of names, and that they would let the child name herself. When she was four years old she announced:

"I'm Nancy; so you can stop calling me Sugar." When the twelve brothers and sisters were grown, all of them married except undersized William—Uncle Billy, as he came to be known—and Nancy, who in later years became Aunt Nancy to everyone in the community.

While Aunt Nancy was young, her happy disposition, graceful figure, long brown curls and merry gray eyes brought her many suitors; but she remained single because she felt it her duty to stay at home and take care of her half-blind father, her frail old mother and her undersized brother, Billy. She did not marry in middle life because the man she loved died. After that she would not marry because she was too busy knitting socks, gloves and jackets for orphan nieces and nephews.

Aunt Nancy reminded her friends and relatives of many other good women. Her gray eyes, like the gray eyes of Dinah Morris, seemed always "rather to be shedding love than making observation." She was known as the Dorcas, the Florence Nightingale and the Frances E. Willard of the neighborhood. "She is as faithful as Ruth," often declared the old mother of the man whom Aunt Nancy would have married had he not died.

Untaught, except by observation, Aunt Nancy evolved the theory that frequent frowning makes the voice harsh. She put her theory into practice, and her voice became as smooth as velvet and as clear as a silver bell. "Children will quit cryin' to hear Aunt Nancy talk," the neighbors said.

Aunt Nancy did not take time to die. One evening, after an unusually busy day, she said, "Good night, everyone!" and quietly slipped out of the living room. When she had closed her door, Uncle Billy heard her say, "Pleasant dreams!" The next morning, when they found an eternal smile on her wrinkled face, Uncle Billy, gently touching her crown of snow-white hair, cried:

"I guess last night you were saying, 'Pleasant dreams!' to your soul, Nancy."

Keds New Play Shoes for Girls and Boys

KEDS are new shoes made for the comfort and good of growing feet. The tops are made of the firmest and finest of canvas; the soles are of durable, flexible rubber. Every line conforms to healthfulness and freedom; and at their cost Keds will outwear any footwear made. Ask, or have Mother or Dad ask, at your shoe store for Keds by these names:

\$1.50
up a
pair

\$1.25
to
\$2.00

\$1.00
to
\$1.50

The names carry back of them the quality and service guarantee of the largest rubber manufacturer in the world. There are pretty kinds for Mother and dandies

for Dad in the big Keds family, too. All around, they are the finest shoes you ever wore to keep your feet well-dressed and happy.

United States Rubber Company

"Signed Lumber is Safe Lumber."

It's a pretty good idea (now that the lumber mills in the Southern Cypress Mfrs. Assn. are IDENTIFYING EVERY CYPRESS BOARD THEY SAW) to MENTION TO YOUR LUMBER DEALER, CONTRACTOR OR CARPENTER—and to ASK YOUR ARCHITECT to SPECIFY—that YOUR CYPRESS MUST BE

"TIDEWATER" CYPRESS IDENTIFIED BY THIS TRADE-MARK Stamped in the End of Every Piece or APPLIED TO EVERY BUNDLE

TRADE MARK REG. U.S. PAT. OFFICE

When a manufacturer places his imprint indelibly upon his product it evidences to the consumer two factors of value which, together, are the sum total of all any buyer wants: these factors are integrity of purpose and complete responsibility on the part of the maker of the desired commodity.

The above legally registered "Tidewater Cypress" trade-mark is now **YOUR INSURANCE POLICY OF LUMBER QUALITY.**

It appears stamped mechanically into the end of EVERY board and timber of

CYPRESS "THE WOOD ETERNAL."

Thoroughly dependable Cypress Flooring, Siding, Moulding and Shingles, etc., which come in bundles, bear the same mark on EVERY BUNDLE.

The legal right to apply this epoch-making symbol of STRICT RESPONSIBILITY IN LUMBER MAKING AND SELLING is restricted to those Cypress mills which, by their membership in the Southern Cypress Manufacturers' Association, attest their devotion to its Principles of SERVICE to the CONSUMER. Only mills cutting "Tidewater" Cypress are eligible for membership. (Cypress which grows too far inland is not equally noted for the "Eternal" or decay-resisting quality.) Only mills which subscribe to the Association's standard of scrupulous care in Methods of MANUFACTURE, INTEGRITY OF GRADING and ACCURACY OF COUNT can belong to the Association. These responsible mills the Association now licenses to CERTIFY THEIR CYPRESS by applying the registered trade-mark with their identifying number inserted.

TRADE MARK REG. U.S. PAT. OFFICE

BY THIS MARK YOU KNOW THAT IT'S CYPRESS. "THE WOOD ETERNAL." AND WORTHY OF YOUR FAITH. IT IS WELL TO INSIST ON SEEING THIS TRADE-MARK ON EVERY BOARD OFFERED AS "CYPRESS."

TRADE MARK REG. U.S. PAT. OFFICE

Let our ALL-ROUND HELPS DEPARTMENT help YOU MORE. Our entire resources are at your service with Reliable Counsel.

FOUR CAKES

Each time the sand runs through the hour-glass 14,400 cakes of PALMOLIVE are produced. Four cakes a second—240 cakes a minute—14,400 cakes an hour—for every working day.

—This is the enormous manufacturing volume required by the popularity of PALMOLIVE SOAP!

For just as Palm and Olive oils were the indispensable cleansing agents and equipped the marble baths of ancient Egypt, Greece and Rome, so is the fragrant, wholesome cake of PALMOLIVE the indispensable equipment of the equally luxurious porcelain bath of the modern American home.

A luxury and a necessity combined; the modern perfection of a luxury ages old; this is the combination that requires *four cakes a second* to supply the millions that demand PALMOLIVE SOAP.

A SECOND

PALMOLIVE SHAMPOO—the olive oil shampoo—is as essential for proper care of the hair as is PALMOLIVE for the bath and toilet. You will find it wherever the PALMOLIVE line is sold, price 50 cents a bottle.

Week-end Package will be mailed for 25 cents in stamps. Contains seven Palmolive specialties in attractive case.

NOTE:—Two new articles have been added to the Palmolive line—Palmolive rouge and lip-rouge. Price 50 and 25 cents each, at your dealer's.

AS THE FOUR GIRLS DIVED, A CHEER WENT UP FROM THE CROWDS ALONG THE PIER

"WELL, if that isn't my luck! What a shame!"

As the electric car crossed the road far down the street and disappeared toward the village, Marjorie Conrad slowed down to a walk.

"Stupid thing!" she exclaimed petulantly. "It might have been at least a minute late."

Tucking her flying hair under her straw hat, Marjorie stamped the dust from her white pumps. She glanced at her wrist watch and frowned. Bob had asked her expressly to get to the bank in time to cash a check for his trip into the city the next day. The bank closed at three o'clock, and the next car would not reach the village until five minutes after three.

Marjorie frowned again, then shrugged her shoulders, and turned in at the gateway of a friend.

"Why, Marjorie Conrad!" Hilda Bates greeted her from the veranda. "Come up and get cool. I've just made some lemonade. You do look worn and weary."

"I am," Marjorie admitted, dropping into a chair. "But this isn't a circumstance to what I'll feel when my brother greets me. Bob's so methodical about everything that he can't understand why other people aren't blessed the way he is. I don't believe he ever missed a car in his life." She took the glass that Hilda handed her.

"I don't know why it is," she continued, "that every time I go for a car it always shoots out of sight just before I get within hailing distance; the rest of the family can get there and sit triumphantly on the stone wall for at least ten minutes before it comes."

Hilda laughed. "Probably they start in time," she suggested.

"That's just what Bob said—start in time. It's all very well to say that, my dear, but what would you do if just as you got down the front steps you found the buckle of your pump dangling and had to rush back and pin it on? It's just my abominable luck!"

Her eyes twinkled a little, yet there was a faint line between her eyes as she looked down at the offending buckle.

"Now, Bob will have to start later tomorrow, and he has so many things to do!" she went on. "Charlie Morris asked him to get him a swimming suit, and he has to look after the lanterns they're going to use at the club on Saturday, and get a new paddle for Ethel."

"Ethel has entered the canoe race?"

"Yes, and there's the best-looking silver cup up for that—with the club flag in enamel and gold; it's much handsomer than the swimming cups. Ethel's bound to get it."

"Dora Keene will put up a pretty close race."

"But Ethel's stroke is much longer and stronger than Dora's. Oh, I know she'll get it! Won't she be proud to have it in her room at college next year? Well, I'm going to get this

BY

WHATEVER NAME

By Winifred E. Mead

car if I have to wait for it," she said with a laugh, as she rose.

As she had expected, the bank was closed when she arrived in the village.

"I do wish they had kept open a few minutes longer!" she sighed, as she set off to do her other errands.

When Marjorie returned she found Robert flat on his back under the automobile.

"I couldn't get your money, Bob," Marjorie said. "The bank was closed."

No reply came from the figure in overalls stretched under the car.

"I'm sorry," she added.

This time the figure became animated, and, after a few contortions, a much-rumpled blond head appeared. With slow calculation Robert looked over his seventeen-year-old sister.

"Thank you!" he said.

"You needn't be so cross about it!" Marjorie exclaimed. "It wasn't my fault that I lost the car. And I said I was sorry."

She turned and walked back to the house.

That night at the dinner table Robert vented his feelings. "Now, I'll have to wait till after the bank opens before I can start for the city," he finished.

"I suppose you'd rather have me go with one shoe than miss the car!" Marjorie said.

"That buckle was loose at Mrs. Garrie's lawn party," Ethel put in quietly. "I expected to see it gracing the garden before we left."

Marjorie flushed. Mrs. Conrad, with her brown eyes a little sober, glanced at her husband.

"Something ought to be done!" Robert exclaimed, looking severely at his pretty sister.

"It's all very well to talk, Bob Conrad," Marjorie retorted, "but if your things were always coming to pieces just when you needed them most,—or getting lost,—the way they do with me, you wouldn't act that way!"

Mr. Conrad hastily changed the subject. "Did you measure your old paddle, Ethel?"

"Bob's going to get the new one for me tomorrow," she replied.

Robert pushed his chair back from the table. "If I have time," he answered, with a meaningful look at his younger sister.

On the following day, in spite of his enforced delay in starting, Robert was able to do everything that he had planned to do in the city. And by the time the paddle arrived and the whole family went down to the wharf, the incident of the bank was quite forgotten.

The clubhouse was built at the end of a long

point that projected out into the bay. During the summer it was the scene of many festivities, none of which roused more interest than the water sports that always took place in the latter part of August.

This year all three of the Conrad young people had entered in the sports—Robert for the fancy dives and half-mile swimming race, Ethel for the canoe race, and Marjorie for the two-hundred-yard swimming race.

As the family descended the steps, Marjorie took a clean dive into the water and came up laughing at the edge of the wharf.

"Look out for your stroke, Marj!" Robert warned her. "Remember Mrs. Davis won by a lot last year; she uses the English racing stroke. If I were you, I'd stick to the side stroke and finish up with the crawl."

Marjorie scrambled up to the wharf. "Mrs. Davis hasn't been exercising enough this summer to worry me," she answered. "But Dora Keene has entered this race, too. Hilda told me this morning. I might beat her in an endurance race, but she simply shoots through the water."

Ethel turned in surprise. "Has Dora Keene entered that race? Why, she's the opponent I'm most afraid of!"

"Is this person such a marvel?" asked Mr. Conrad, with a laugh.

"She's been visiting the Baileys all summer, father, and she certainly is great at sports," Robert answered.

He slid the canoe into the water and Ethel started out to the float. The family watched as she sent the slender green boat ahead with strong, steady strokes.

Robert smiled. "Ethel's all right. The Keene girl will have to put up a pretty good fight."

"How is the paddle?" asked Mrs. Conrad, as Ethel, with her face flushed and her eyes bluer than ever, swung the little craft against the wharf.

"I may have to go back to my old one," Ethel answered doubtfully. "This is a little heavy."

"Do you know, I was afraid that it might be a little heavy," Robert said. "But I was in such a hurry that I couldn't stop to consider for very long."

Saturday, the day for the water sports, came. The weather was perfect—not too warm for the onlookers and quite warm enough for those who had entered the events. The sports were to be held in the afternoon, but as early as ten o'clock the club was bustling with

activity. Owners of sailboats and launches were cleaning and decorating their crafts in honor of the occasion. Others were hanging Japanese lanterns in the clubhouse and on the veranda. Everyone seemed to be alive with expectation.

Athrill with excitement, Marjorie trailed her fingers through the water where it lapped at the mossy sides of the wharf.

"Say, Marj!" Robert called from the steps above. "Mother just told me to ask you whether you got a new cap."

Marjorie turned quickly. "O dear, no! If that isn't just my luck—a hairpin went through mine yesterday, and I meant to have dad bring me one. Isn't anyone going into the village?"

"No!" Robert answered shortly, as he shifted the pile of bathing suits from one arm to the other.

Marjorie laughed up at her brother. "You do look too funny, Bob," she said.

Her brother frowned. He was carrying the Conrads' old bathing suits to the club to be used in the obstacle race, in which each boy had to swim to the float, put on a lady's suit and return as best he could. Marjorie had promised to look after the suits herself, but that morning Robert had found the pile adorning the dining-room table.

"Well, you'll look funnier," he answered coldly, "when you get to the party to-night with your hair all wet and stringy."

Marjorie's eyes sobered as her brother turned away. The party that followed the sports was one of the events of the summer. She could not excuse her attending it in an untidy condition by the fact that she had beaten Dora Keene in a two-hundred-yard race. Marjorie had never thought of the possibility that she should not win the race. Across from the wharf and half a mile down the opposite shore the beautiful house of the Stevens girls caught her eye.

"Clara would lend me her cap," she reflected. "I haven't time to dress and get to town, and the trip across will take me barely half an hour."

In a moment Ethel's canoe was bobbing at the wharf and Ethel's old paddle was in her hand. Clearing the wharf with a swift stroke, she headed for the other side of the bay.

Clara Stevens gladly lent Marjorie the cap. "It's tight as a drum," she said, as she walked back to the beach with her. "I'll be on the pier cheering you on, and if you win I'll lay it to that cap."

Marjorie got into the canoe. "Thanks. I surely hope that it will bring me luck."

Smiling up at her friend, she thrust the paddle into the sand at the side of the canoe. There was a creak and then a snap!

"Caught in-between the stones!" Marjorie exclaimed. "You haven't broken it?"

Marjorie brought the paddle up out of the

water. There was scarcely a sign of the damage—only a crack that ran the length of the blade.

"It's Ethel's old one," she answered. "I'm glad she's got a new one."

The canoe took the homeward course lightly. The wind blew Marjorie's bright hair about her eager face, and her eyes became radiant with happiness. When she pulled the canoe upon the wharf she noticed a quietness about the place that sent her swiftly up the steps, across the tennis courts and down the road toward home. When she arrived the family were half through their luncheon.

"Why, Marjorie!" Mrs. Conrad exclaimed. Marjorie dropped into her chair. "Well, I got a cap, anyway!" she said, panting a little.

In the buzz of talk she quite forgot about the injured paddle. Everyone was too much excited to stay long at the table, and soon the family went to their rooms to dress for the sports. Half an hour later, Marjorie, clad in her dark bathing suit and carrying her raincoat on her arm, ran down the steps; the red cap was pulled close about her pretty, dimpled face.

Robert, with his face glowing with excitement, met her at the door.

"Hurrah!" he cried. "I've just found out that your race comes off before the canoe race."

Marjorie's brow puckered.

"Can't you see," her brother went on, "you stand a lot better chance of beating Dora Keene when she's fresh than Ethel does. Don't look so startled—Ethel admits it herself. And now —"

Marjorie's eyes were bright. "Nice Bob," she said. "You think I can really beat her?"

"Beat her? Why, you'll come in a good length ahead!"

Marjorie turned toward the door. No one knew how much she admired her big brother, and how much it really hurt her to feel that he disapproved of her, as he so often did. With a sharp little click of her teeth she determined to come in a glorious victor.

The races began promptly at two o'clock. When the ladies' two-hundred-yard race was called, four young women answered—Dora Keene, Bessie Churchill, Mrs. Davis and Marjorie.

Robert, with a complacent smile on his face, stood at the back of the wharf with a group of other boys. As the contestants waited for the pistol shot that would send them into the water, Marjorie glanced at him once.

"Ready—one—two!" The pistol rang out, and as the four girls dived, a cheer went up from the crowds along the pier.

Marjorie at once settled into a swift, steady side stroke, changing from one side to the other. Dora Keene swam in beautiful form beside her. Slightly ahead, Bessie Churchill was using all her strength at the beginning of the race. A little behind them, Mrs. Davis was swimming easily and saving her strength—she was going to prove a formidable opponent, Marjorie thought.

But her greatest concern was the girl at her side, and whenever Marjorie turned toward Dora she watched her pace. They held their relative positions for about a hundred yards; then Bessie Churchill showed signs of weakening. Slowly the others overtook her, until, when they had gone twenty yards more, she was in last place.

A few yards more, and Mrs. Davis began to crawl up until she was abreast of Marjorie and Dora Keene. Dora glanced at her and then, with her face white and tense, increased her speed and shot ahead; now, Marjorie thought, the time had come!

With a sureness that had come from long practice, from mastering every detail of the stroke, she broke into the "crawl." Her right hand shot out and cut the water with a little splash. She overhauled Dora—now she was ahead. But she had not won yet. Dora threw herself forward in the effectual English stroke; and Mrs. Davis was gaining, too. Without another thought except that of keeping herself to the task of holding her lead, Marjorie swam as she had never swum before.

Across the water came the faint sound of cheers from the clubhouse. Straight ahead lay the boats that marked the end of the race. Marjorie's head went under again. When next she brought it up, the boats were only a few yards away. She thought that she still held her lead, but at the same moment Dora Keene's hand struck the water parallel with hers. Marjorie closed her eyes and gritted her teeth. She had to win! Putting all her strength into her strokes, she hurled herself forward and across the line!

"Splendid work!"

As one of the men dragged her over the side of the club launch, Marjorie could hardly realize that the race was over and that she had won. When they had picked up the other swimmers, the launch started back to the pier.

Robert met her at the wharf. "That was one close race!" he exclaimed. "I thought she had you, Marj!"

Getting away from the crowd of congratulating people, Marjorie ran back to the house

to dress. She hoped she should not miss the events in which Bob and Ethel had entered, but of course there was no question about Ethel's winning hers; unless Dora Keene was the sort of person who is strengthened by defeat—and Marjorie very much doubted that—Ethel need not fear her now. And Bob—why, Bob would win the half-mile race, anyway, and perhaps the diving contest.

Pulling her wide hat down over her hair, Marjorie hurried back to the club. Everyone was crowded along the edge of the pier; there was a feeling of excitement in the air that made her quicken her steps.

"What's on now?" she asked Hilda Bates. "The canoe race!"

Marjorie stood on tiptoe. The contestants had started—they were out past the float already.

"What's the matter?" she asked breathlessly.

Mrs. Conrad turned to Marjorie. "Something's the matter with Ethel—she doesn't seem to make any progress. See how peculiar she acts?"

For a moment Marjorie watched in silence. Then she caught her mother's arm.

"Did she —" she began, then choked and stopped.

"Marj!" rang out a boy's angry voice.

Robert had dashed up the steps from the wharf and was beckoning to her from where he stood at the edge of the pier. Marjorie went across to him. Her eyes were wide and there was a lump in her throat.

"How did you get over to the Stevens's this morning?" Robert asked.

"O Bob!" Marjorie's voice was strained. "I—what paddle did Ethel use?"

"The old one," Robert replied. "You —" He stopped. His hands sought the pockets of his coat; his voice shook with anger. "She decided to take it at the last moment, and you broke it and didn't even let her know!"

Marjorie turned quickly. With one glance at the canoes now on their homeward way with Ethel far in the rear, she broke away from her brother.

In the excitement and fun of the other races and contests the canoe race was soon forgotten. Ethel bore her defeat with a laugh. If she knew what had caused the crack in the paddle and her subsequent misfortune when the piece came off while she was paddling, she showed no signs of it. Robert won in the long-distance race and was gloriously defeated in the diving contest.

When the cups were presented there was no response from the winner of the ladies' two-hundred-yard swimming race. Robert, big and handsome in his white flannels, stepped up and claimed it for his sister.

On the way home the family were silent. "Don't say anything about it now," Mrs. Conrad advised as they ascended the steps.

Ethel nodded assent. "Poor Marjorie, I know she must feel badly—much worse than I feel about it. I don't believe I'd have won, anyway. Why, Dora Keene was simply keyed up for that race! You should have seen her ply her paddle!" She ended with a laugh.

Robert was silent. He carried the two cups up the steps and placed them on the hall table. Then he started for the garden.

Behind the tall vine-covered stone wall, where the flowers grew in vivid masses down to the water's edge, Marjorie heard her family return. A moment later there was a sound of footsteps coming through the garden gate. Still Marjorie sat in a disconsolate heap with her face toward the misty, gray water.

Without a word, Robert sat beside her on the bench.

"Pretty good luck you had beating Dora Keene this afternoon," he said nonchalantly.

Marjorie sought for the sarcasm in the words, but there was none. His face was sternly cold.

"It wasn't luck!" she answered, and her voice was shaking with indignation. "I fought every bit of the way, and you know it. If I hadn't learned every little thing about that stroke, I'd never have beaten her!" For the moment she had forgotten everything else. She lived over again the swift, glorious race.

Robert's hands sought his pockets; and he

looked at her with hard eyes. "That's just it," he said. "Attention to every little thing."

Marjorie turned, and the rest of the afternoon came back to her with sickening persistence.

"I know just what you think of me, Bob," she said. "I don't blame you! If you only knew what I think of myself!" She paused. "I shouldn't feel so terribly if I had lost my own race—but to have Dora Keene beat Ethel, when it was my fault — The worst of it is I can't do anything now—the race is over, and she lost just because I was so—so—thoughtless! I'd give her my cup if it would do any good, but she wouldn't take it." She stopped.

A DOUBTFUL RESCUER

By Roe L. Hendrick

MR. WADE was neat and methodical almost to the point of whimsicality. As he stood in the doorway of the store, with his overcoat half on, he paused even in his hurried departure for a final injunction.

"Don't forget to sweep the last thing

Robert's voice was a little husky. "It's all very well to call fortune or misfortune 'luck' or 'fate' or by any other name, but when you come right down to it a person's luck is about what they make for themselves. If I were you, I'd keep that cup; I'd put it where I could see it a lot—even if I had to hang it round my neck."

Marjorie smiled faintly.

"Bob," she said, "I'll do it! If Ethel won't take that cup for her college room, I'll keep it where I can see it when—my buckles come off, or—or—a hairpin goes through my rubber cap. And I'll call it my 'get-there-anyway cup.'"

He smiled at the thought, and, after putting away the money and locking the safe, busied himself in caring for the canary.

Then he hurried to the cellar, shook down the furnace, threw on more coal and, leaving the drafts temporarily wide open, in order to clear off the gas, ran up the stairs and seized a broom. In spite of his weariness he swept vigorously, and in half an hour had finished his work.

"Almost midnight," he muttered, "but I'm through!"

Drawing on his overcoat and cap, he turned off the rest of the lights and started for the front door; then he stopped abruptly.

"That furnace!" he exclaimed. "I've forgotten to close the drafts! It's lucky I remembered, or there wouldn't have been any fire by to-morrow night, or perhaps the building would have burned down in the meantime."

The chains that operated the front damper of the furnace and the check draft came up through the floor at the rear of the dry-goods counter. As he hurried toward them, Ben tripped over something that leaned against the counter, and nearly fell headlong. Recovering himself, he reached down and grasped the broom that he had placed there a minute or two before.

"I'll forget my head next!" he cried, in vexation. "If Mr. Wade knew I'd left that broom outside the storeroom, he'd give me a lecture."

Chuckling at the thought, he forgot his momentary irritation. The storeroom was in the corner toward which he had been headed, and he quickly made his way to it. Reaching inside, he tossed the broom behind the door, and heard it topple over and fall.

Again he chuckled. "That's not up to the Wade level of orderliness," he said to himself, and he stepped inside to pick up the broom. He had just touched the handle with his extended fingers, when his foot struck the brush end and he stumbled forward and bumped his head against a shelf. The blow hurt, and, as he straightened up, dazed for the second, his arm came in contact with the back of the door, and the impact slammed it shut.

Still rubbing his head, Ben set up the broom properly, brushed the knees of his trousers, and then reached for the door to open it. His hand swept nothing except the bare wood, and then he remembered that there was neither knob nor latch on this door; it fastened from the outside with a snap lock! He was a prisoner by his own careless action, and, moreover, he did not at the present moment see how the prisoner was going to get out.

The storeroom was a mere closet, not more than seven feet square, and shelves along two sides still further reduced the space in it. On those shelves were ranged rolls of wrapping paper, piles of paper sacks, a box of tools and a quantity of unmarked goods. Very seldom was the door closed during the day, but upon leaving the store Mr. Wade, if he were the last to go, invariably pulled it shut. Ben was not so particular. He could not remember ever having closed it before; and certainly no one had ever shut it from the inside.

The young clerk paused and tried to think out the situation clearly. Mrs. Wade certainly would not expect him before Sunday night, and would not begin seriously to wonder at his absence before breakfast time on Monday. Even then, unless some one happened to notify her that the store was not open, she might not become sufficiently alarmed to start an investigation before noon.

His parents knew nothing of the visit that he had planned. Very likely, when they went

DRAWN BY W. F. STECHER

"WHAT'S THE MATTER—YOU AFIRE IN HERE?"

to-night, Ben!" he called. "And see that Dickie has plenty of seed and water before you leave. My goodness! I've got just seven minutes in which to catch that train! Good-by! I'll be back on the 2.14, Monday, sure. Good-by, Ben!"

"Good-by!" Ben Griswold shouted from behind the grocery counter, where he was weighing half a pound of tea for a farmer's wife.

It seemed to Ben that trade never had been so brisk as it was between half past eight and eleven o'clock that night, with only one pair of hands to wait on both villagers and country people. But finally the last customer departed, and Ben, switching off the lights from the front windows, prepared to close the store.

"Always sweep the last thing at night," was Mr. Wade's standing order, and one that a clerk in his employ was not likely to forget, for he repeated it almost daily. "When you do that," Mr. Wade would explain, "the dust settles during the night, and the next morning you can take a cloth and have everything as clean and bright as a new pin in fifteen minutes. Nothing disgusts me more than to go into a shop in the morning and see a broom stirring up dust that settles over everything in the place, I don't care how much oiled sawdust you use. It's a sure sign of a slovenly proprietor. Sweep at night and dust in the morning, is the rule of cleanliness."

Ben sighed, for he was very tired and still had a four-mile walk before him, for he was going home to remain until Sunday night. He had told Mrs. Wade—he boarded at his employer's house in the village—not to expect him, and had planned to surprise his parents.

"I can get Steve up to let me in, by rattling his bedroom window," he said to himself.

"If we're quiet, father and mother won't know I'm there till I come down to breakfast."

THE FIFER *By* Agnes Mary Brownell

A FAINT, thin blare of horns sounded, a life shrilled and drumbeats became audible. "It's started," ran the whisper, and the crowd edged closer along the wooden sidewalk on Main Street. There were children

smartly sashed and be-ribboned, countrywomen with tugging babies in their arms, girls the first freshness of whose pain-fully ironed flounces was already wilted by the dusty ride into town, and their men-folk—husbands and sweethearts—in unwonted Sunday attire. The townspeople, a little smarter, a trifle important in manner, mingled in the throng, and craned their necks for a first glimpse of the procession.

Henry Weedy was band-master; Henry had been born to that end. He was a brawny six feet of inefficiency. How his ever-growing family existed was a mystery of which Sarah Weedy, his wife, alone held the key. But when Henry, in his braided uniform and plumed helmet, led the band, he was a source of pride and gratification to the whole countryside.

The trombones came next; their slides worked with the precision and regularity of piston rods, and produced at intervals a hoarse, expiring breath, like escaping steam; they were, however, of inestimable decorative effect in the general scheme. The cornets and drums made up any deficiency in the volume of sound, and above the blare and the reverberating drumbeats shrilled old David Merry's life.

They had swung into the tune of The Girl I

Left Behind Me. David's thin, white beard blew aside in the wind. David was a very white, old man; his thick eyebrows, above deep-set, peering blue eyes, were quite white, and high up on his sharp cheek bones showed the withered rose of his youth. Lank and tall, a little stooped in his old uniform and army felt, David kept step with the band, and blew sweetly and shrilly and with a fine martial spirit upon his old fife.

The celebration was to be held in the grove, and the crowd surged thither. Every man, woman and child of them was gloriously happy, as if this Fourth of July effervescence of patriotism had gone a little to their heads. The band played, the crowd jostled, the sun blazed, flags waved, a mist of heat went up from the earth, the very dust of the road baked as from a smouldering fire; the voice of the orator, now slightly hoarse, the cries of the cold-drink venders, the whimpering of children, the hushed crooning of their mothers, going on and on, like a kaleidoscope of sound, filled the grove and the deserted streets.

When the band was done, old David Merry, limping a little,—for the fire of patriotism within him had consumed much of his slender store of strength,—betook himself to where, a little off the main street, his house, with its carefully swept front yard and its neatly stacked woodpile at the rear, awaited his solitary coming.

David had lived alone since his mother's death, and she had been bedridden during her last years. From her wooden bed, with its shining, funereal headboard, beneath a quilt of cunning pattern that David himself had pieced, she had ruled and directed her household affairs with an iron hand. She had instructed David in the intricacies of bread making; the needle had grown accustomed to his hand; his dishpan sunned itself daily just outside the kitchen door. No housewife in the village was a whit neater than David Merry; his house was not only orderly—it was shipshape. David had his pension and his little truck garden and his habits of thrift and economy.

Like a practical housewife, he set his kettle on the stove as soon as he had entered, although his body ached with fatigue. The drawn blinds made a cool, green twilight in the room after the glare outside. David spread his table. All unwitting, David had made a very gala table of it—the white cloth, thin and darned from many launderings, bore his

mother's old blue china, and David's little garden patch had furnished the late-planted scarlet globes of radishes. The brave and homely colors, the faded uniform, the old fife in a path of sunlight, overshadowed the room, like the spirits of old Fourths.

When he had eaten, David made all tidy; the afternoon droned on, and David slept. Tea was a small matter; David polished his cup and spoon, went to his little garden and plucked the hardy blue and yellow flowers that had something stanch and soldier-like about them, dropped his fife into his sagging pocket, and betook himself to his tryst.

The quiet village cemetery was known as Pleasant Hill. Thither David trudged along a winding road with his handful of flowers and his hat in his hand. There had sprung up a smart little breeze. The ornate iron gates swung open, and David went down a little sloping path into the older part.

His mother's headstone, a white and shining slab, gleamed out from a background of ancient and twisted lilacs, and the smooth mound had a pattern of shells and pebbles like the coverlets that she had prized.

David laid his tribute of blue and buff flowers upon her bed, and as he did so a glow went through him; he thought of his house and its shining windowpanes, and the polished dishpan on the wall, and the swept paths; and through all the mystery of time and space he felt his mother's commendation.

After a while he went a little farther down the slope to a low stone of clouded marble and a grassy mound. There David dropped the rest of his flowers, and, sitting down stiffly on the sloping ground, drew out his fife. He played The Girl I Left Behind Me.

Presently she stole out to meet him—a fair, blue-eyed, transparent girl doomed to an early death. She had not even bidden him good-by, but had slipped away from him and from the world before his furlough.

And as he played on—for he knew many martial tunes—his first early comrades joined him one by one. There was Hank Berry, the village harum-scarum, who was their first soldier dead; there was the schoolmaster, a young man, who had died in camp, and who had never seen a battle; and there were the Bascombe boys, shock-headed, freckled, stocky youths, constantly cheerful and good-natured.

On every recurring Fourth, they all journeyed

from their unknown graves to Pleasant Hill at the sound of David Merry's life, and stood round him with grave eyes. In his thoughts he gave a loving welcome to each in turn.

There were others—older, later visitants. Perhaps their old bones had yet some restraining hold upon their young, reborn spirits

—perhaps it was not yet time for that moment, that twinkling change. They limped back at the call of David's life with a straining and a creaking sound that may have been, after all, merely the writhing and the twisting of the old lilac branches.

It was a long, long roll call—that of his comrades.

At last David rose and slipped his life back into his pocket. He was stiff and his bones ached, but he was very happy.

David had always been sociably inclined, and he liked young faces—the young faces of his youth.

He limped cheerfully away down the long, brown, dusty road, and, reaching into his pocket for a stray peppermint as a precaution against any ill effects of the evening's exposure, his hand touched his life, and he squeezed it gratefully, as one presses the hand of a very old and dear friend.

"It has been a beautiful Fourth—I don't know when I ever saw a finer," old David Merry confided to his life; and that faithful comrade seemed to emit a wheezy breath, as if in acquiescence. David's lips formed themselves to his favorite tune.

"It's Uncle David Merry, been out to see his girl," quoth the sympathetic folk a little sadly, as they sat outside their doors in the warm, dark night.

Not one was so young, so happy, so beloved, so closely companioned, as the old fifer.

DAVID HAD MADE A VERY GALA TABLE OF IT

SITTING DOWN STIFFLY, HE DREW OUT HIS FIFE. HE PLAYED THE GIRL I LEFT BEHIND ME

to church the next day, they would drive directly past the place where he was imprisoned. He had sometimes passed Sundays at the home of one of his friends who lived a few miles out from the village, and so his family would not be surprised if they did not see him at church. Therefore, unless some one tried the unlocked door and walked in,—a very unlikely proceeding on Sunday,—he saw no chance of his getting out before Monday.

Of course a person could survive without food or water for much more than that length of time; but would the air hold out in such confined quarters? As the thought flashed into Ben's mind, it seemed to him that already he was beginning to breathe with difficulty. A moment's reflection convinced him that that was merely a trick of his imagination; but he realized that in several hours he should be facing real peril.

Was the lock of the door as strong as it seemed? Ben clutched at the door with his finger nails, but he could find nothing to grasp; then he hurled himself against it two or three times. But the stout door, which opened inward, scarcely quivered under his attacks.

Turning to the box of tools, he groped in it, hoping to find a hatchet; but the only tool he found that could be of the slightest use to him was a light tack hammer. The heavier tools, Ben now remembered, were in the back room, where he had opened a box that evening.

As the boy swung about, almost in despair,

his glance fell upon a feeble bar of light that seemed to penetrate the closet from above the door-frame. Then he remembered that above the door was a narrow transom, placed there more for ornament than for use, apparently, for he had never known it to be opened.

Hurriedly throwing several bundles of paper and goods on the floor, he stepped upon the pile and fumbled for the catch of the transom. The iron was so rusted that he could not move it with his hands, but a few blows with the tack hammer loosened it; then Ben turned the little sash at right angles in the frame.

Now he no longer felt in danger of suffocating; but he was no nearer getting out of his prison than before. The opening of the transom was so narrow that even if he could get the sash out, which was doubtful, he could not force his body through it.

Thrusting his face against the slit, he filled his lungs with the outside air. For some reason it seemed singularly unrefreshing. Again he drew in his breath, and then, raising his hand, held it before the opening. The air was almost as warm as if it were coming through a register.

He reflected that at that height—only two feet below the ceiling—the air would be much warmer than nearer the floor; and then another reason for the unnatural warmth flashed into his mind. The furnace, piled with coal, was drawing at full head, and must already be

getting red inside the asbestos filling. What if it set fire to the building while he was a helpless prisoner, and when probably every member of the volunteer fire company was in bed and asleep? Ben felt his scalp prickle; he was sure that his hair was beginning to stand on end.

At that moment the single street lamp within his range of vision through the store windows showed him a hurrying figure—probably that of some belated villager on his way home.

Ben shouted wildly, and the walls of the storeroom reverberated; but evidently the passer-by did not hear him, for he disappeared without even turning his head. The store was so long and so thickly filled with goods that even the report of a gun in the rear of it might not have been heard in the street.

There was no longer a night watchman in the village, for the trustees had abandoned that means of protection as too expensive a luxury. Ben could only depend on chance wayfarers' bringing him relief, and he doubted that another person would pass the store before morning, for it must be after one o'clock now. However, he determined to watch and to do his best to give an alarm if anyone should come near.

He had the tack hammer, and he decided that if anyone passed he would hurl it at the front window. If he succeeded in throwing it that far,—even if it did not break the glass,—a person outside could hardly fail to hear it strike.

Suddenly Dickie began to twitter plaintively

and to flutter about in his cage. He was evidently getting restless in the heat. Ben thought the temperature would rise for an hour or two longer. Then, if the old furnace held out, the store would slowly cool off.

"Poor Dickie!" Ben said to himself. "It's smother or freeze for you, I'm afraid, and I guess I'm not much better off!"

What was that? For a second Ben thought he heard the crackling of flames in the cellar, and he held his breath to listen. No, the sound came from outside, and probably it was only the wind, or the footsteps of a stray dog or cat prowling about the building.

Then the boy saw some one standing near the corner of the front steps. How he had got there Ben did not know, for the second before the sidewalk had seemed utterly empty.

"Hi!" Ben shouted. "Hi!"

The figure disappeared, and Ben in desperation hurled the hammer toward the window. But the light missile traveled scarcely half the distance; striking a pile of dress goods, it dropped almost noiselessly on the counter.

Although he felt almost sick with disappointment, Ben continued to stare intently at the window. Five minutes passed, and then he suddenly saw a face peering in at a lower corner of the pane in the front door. How long the face had been there before he saw it he could not tell, but he recognized the features instantly. The rays from the street lamp, streaming across them, showed the broken nose, the low forehead and the thick lips of

Jim Burns. Jim was the local "bad man," and had been released from jail less than a fortnight before; indeed, Burns had passed much of his time in jail for various offenses. Everyone in the village thought him utterly abandoned and worthless. Ben was uncertain how to regard the appearance of this rescuer; he almost preferred to stay in his prison and to take a chance with the fire. He watched the man in silence for several minutes.

Burns had evidently heard something and was suspicious, but he had not identified the source or nature of the sound. At last he produced a chisel or some similar tool and began to work at the wood about the pane of glass. To steady the door, the man presently clutched the handle with his other hand. His grasp released the latch, and the door swung in.

Ben had decided what course of action he should adopt, and as the man stole into the room he shouted:

"O Jim, I'm so glad you heard me! I didn't think anyone ever would hear! Set down the cage first, please; the canary's smothering."

"What's the matter—you afire in here?" the man asked. But he quickly unhooked the bird cage and placed it on the floor where the cool air was rushing in.

"I don't know for sure," said Ben, "but I'm afraid so. Come over here and push back this catch."

"You locked in?"

"Yes, here in the storeroom. Hurry, Jim, so that we can see to that fire! I thought I heard it crackling once!"

Burns ran to the storeroom, felt for the catch and quickly shoved it back. Ben's first act, when he got out, was to turn on the lights. As he did so, he saw Burns slip something hastily into a pocket, but he pretended to notice nothing.

"Come on down cellar," the boy said, when he had regulated the draft by means of the chains.

With all of the seeming unconcern that he could muster, he led the way downstairs; he carried himself bravely enough, but as a matter of fact he half expected any moment to receive a blow from behind. The "bad man," however, was so surprised by the situation in which he unexpectedly found himself, and so deeply interested in the possible fire, that he had no idea of injuring anyone.

They found the door of the furnace and the first length of smoke pipe cherry red; but when Ben had given the fire another shaking and had banked it with fine coal, all danger was past.

"It's a mercy that you heard me, Jim," Ben repeated.

"I guess you would 'a' been burned up if I hadn't," the man declared. "I thought I heard somebody a-yelling and a-yelling, but I couldn't tell where for the longest time. I was just going home, but I hung round to try and find out who was in trouble. I expected to have to break in the door, not knowing it was unlocked; in fact, I guess I did start to."

"Well, you got me out; I'll never forget that, Jim."

When all was in order, Ben put up a basket of groceries, laid a ham on top, charged the goods to his own account, and then pressed them upon his rescuer, who accepted the gift with singular reluctance, although with many thanks. When they parted it was at a point more than halfway to the Griswold place, where Burns turned off to go to his own shanty among the hills. He was walking with unwonted erectness when Ben last saw him, and with a sprightly step quite new to him.

Ben told the story to his parents the next morning.

"What, Jim Burns!" his mother cried. "Oh, I'm so glad I didn't know about it at the time! I should have expected him to murder you!"

"Jim has his good points," Ben replied, smiling. "I think so much better of him than I ever did before that I'm going to putty up that front sash and stain it before Mr. Wade has a chance to look it over and draw his own conclusions."

IN AUNT STELLA'S POCKET

By William Thomas Whitlock
In Eight Chapters. Chapter Two

WHEN Aunt Stella returned from the stables, she entered the house by the kitchen door. In the living room she lighted the kerosene lamp and put it on the high mantelshelf. Gathering up several breakable articles, she carried them into her bedroom. Two spotless Navajo blankets that served as rugs she rolled into cylinders and placed in one corner. After carefully surveying the room, she opened the front door.

"You can come in now," said she. "Take off your hats and hang them on the rack there by the door. John, you carry the suit cases into the west bedroom. Be careful how you walk on this floor. I polished it last week, and I don't want it all scratched up. Sit down on that couch and stay there while I get supper."

"May I help you, aunt?" asked Elizabeth timidly.

"No, you can't. I've done the cooking on this ranch for the last ten years, and I don't want my things all misplaced by a new hand."

While their aunt moved briskly about in the kitchen and dining room, the orphans sat in a solemn row on the couch. At last Tommy began to whimper hungrily.

"Hush! hush!" whispered Elizabeth. "Aunt Stella will give us a nice supper soon."

"All ready now," announced Aunt Stella from the doorway.

As the children speedily arranged themselves round the table, they stared at the five yellow bowls that dotted its bare surface.

"I've always understood that corn-meal mush and milk is a good, healthy diet for children before going to bed," said Miss Jones. "You can have all the milk you want, but no sugar."

The hungry orphans gazed at one another in blank dismay. One and all, they detested corn-meal mush, and John loathed milk. Tommy and the twins were entirely unable to conceal their disgust and disappointment. Pushing aside the yellow bowls, they sank back, sulking, in their chairs.

"Elizabeth, what do they usually eat for supper?" cried their aunt.

"In the dining car we had beefsteak and oysters and baked potatoes and ice cream."

"And none of you were sick in the night?"

"No, Aunt Stella."

"Humph! Young ostriches! Nothing in this house would disarrange your stomachs."

Opening a cupboard door, she brought forth sundry heaped plates and platters. The children fell upon the food eagerly. Their aunt gasped in astonishment as the cold meat and potatoes and slices of bread and butter disappeared.

"Where's the dessert?" asked Clarissa with a sigh.

"There's some oranges and bananas in the lunch basket," said Malissa.

"Tommy want thome choc'-late candy—in box. The nice young man buyed Tommy t'ree boxes," said Thomas Wentworth.

His aunt grimly produced the lunch basket and the boxes of candy. She folded her arms and sat watching in silence until the twins were nodding over the oranges and Tommy had fallen forward on the table, sound asleep.

An hour later Aunt Stella came into the living room and sank heavily into a chair.

"My land!" she said

aloud. "The cost of those children's grub alone would keep five cows sleek and fat. If I can't find places for them, I'll be et out of house and home. But it was some pleasure to watch the young scamps feed."

Her meditations were interrupted some time later by a wail of pain from the west bedroom.

"My tummy hu'ts!" announced Thomas Wentworth.

"There, now!" cried Aunt Stella, leaping to her feet, panic-stricken. "No other woman nearer than Aunt Louisa Jackson, seven miles down the trail, and no doctor this side of Digville, eighteen miles away."

"Aw—yow! Mamma, 'Liz'beth, my tummy hu'ts awful!" howled Tommy.

"S-h!" said Elizabeth. "Aunt Stella won't like it if you cry and keep her awake."

"Elizabeth Jones," cried the excited Aunt Stella, hastening into the bedroom, "don't you dare to frighten the child with me! What in the world do you give him when he has the stomach ache?"

"I think mamma used a—liniment!"

Then at the memory of her mother the girl buried her face in the bedclothes and burst into sobs. John came from his room, rubbing his eyes; and from their bed in an opposite corner the twins stirred in fretful annoyance at being roused from slumber.

"You mustn't let us disturb you, Aunt Stella," said John sturdily. "Elizabeth and I'll take care of Tommy."

"Howling bobcats!" almost yelled Aunt Stella. "Do you think I am some silly creature with nerves or a selfish heathen who would let you two children sit up alone with a sick baby? But I haven't the least idea what to do. I've sat up many a night with an ailing cow or mule, but a baby—John, you build a fire in the living room while I light a lantern and go out to the stables. There's some horse liniment in the wagon shed. Perhaps if we apply it on the outside—"

When Aunt Stella returned to the house, John and Elizabeth had placed the couch beside the fire. On the couch lay Tommy, squirming and moaning in pain. It required the combined efforts of the three nurses to apply the liniment; and the effect was startling. The small patient doubled up like a jack-knife and rent the air with screams.

"It's got to be some sort of drench, something on the inside!" said Aunt Stella distractedly. "Oh, what—what—"

"I think it is pepsin," said John.

"Humph! You mean peppermint," said his aunt, striking her brow. "I remember now. Thank goodness, there's a bottle in the pantry!"

Again the three had to show skill and dexterity in order to force the liquid between the set teeth of Thomas Wentworth. But when they had succeeded, the patient dismayed them by crying piteously for more. At last he fell into a fitful slumber, broken by occasional spasms of pain, during which he howled for "more peppymint."

At midnight Aunt Stella curtly ordered Elizabeth, who was nodding, to go to bed. She followed the girl into the bedroom and awkwardly tucked the coverings about her. Elizabeth smiled shyly at her, and hesitatingly lifted her arms as if to place them about her aunt's neck. But Aunt Stella fled hastily back to the living room.

"You go to bed, too, John," said Aunt Stella, as she sat down beside the restless Tommy. "I believe you are a good, manly sort; you remind me of your father. I'm glad

I brought you out here, where you'll have a chance to become something besides a grinding spoke in a woolen mill."

"Thank you, aunt. But, if you please, I'll stay up with you and Tommy."

His aunt gave him a look of frank approval. "You're certainly no piker," said she, with a short laugh.

"I don't know what you mean by a 'piker,'" said the boy simply.

"No, I suppose not. You children have lots to learn out here that you should have known from the cradle."

The dawn was breaking over the Pocket when Stella Jones carried the soundly slumbering Thomas into the bedroom and placed him beside Elizabeth. Wan-faced and hollow-eyed with her vigil, she came back into the living room and dropped into a chair. The fire in the grate had burned out. John had stumbled drowsily to bed.

"It's no use arguing and beating round the bush," she said to herself aloud, a habit that she had acquired in her solitary life. "I've simply got to keep Tommy. Suppose some ignorant people adopted him, and he took sick in the night—and they didn't know enough to give him peppermint?" She folded her arms and rocked thoughtfully back and forth.

"I'd rather keep John," she said at last. "He's big and strong enough to be of some use to me. And how I'll ever manage with the baby, no one knows. But—well, I'm going to keep Thomas Wentworth Jones here with me in my Pocket."

As the sun came up over the eastern peaks Aunt Stella went out to the stables and corrals to milk her cows and to feed the ponies. The twins, having slept serenely throughout the night, were up and about the place long before the other children awoke. When John and Elizabeth came out on the kitchen porch, the half-clothed pair were racing from one object of interest to another with high-pitched comments of approval or condemnation. Clarissa had cut her hand on the axe at the woodpile; Malissa was joyously loving two downy chicks to a premature end.

With much persuasion and a few threats, John and Elizabeth induced the twins to let themselves be washed and garbed into respectability; then the older children encased Tommy, fretful and hollow-eyed, in fresh rompers. When Aunt Stella came up the path with a foaming pail of milk in each hand, the five orphans sat on the steps awaiting her.

"For all the world like a row of young birds waiting to be fed," thought Stella Jones. "I suppose I ought to find something for them to do, if only to keep them out of mischief, although I'd much rather do a thing myself than tell anyone else how to do it."

"John," she said aloud, "you start the kitchen fire. Elizabeth, fill the teakettle. Tommy, you and the twins come with me to the milk house." She paused in surprise at the eager movements and pleased smiles with which the children obeyed her commands. "Humph! I suppose I must get used to being helped if it gives them that much satisfaction."

After the morning meal Aunt Stella pushed back her chair and reached for her sunbonnet. "I'm going to take you all out and let you get acquainted with the Pocket," said she.

"And leave the dishes unwashed?" exclaimed Elizabeth.

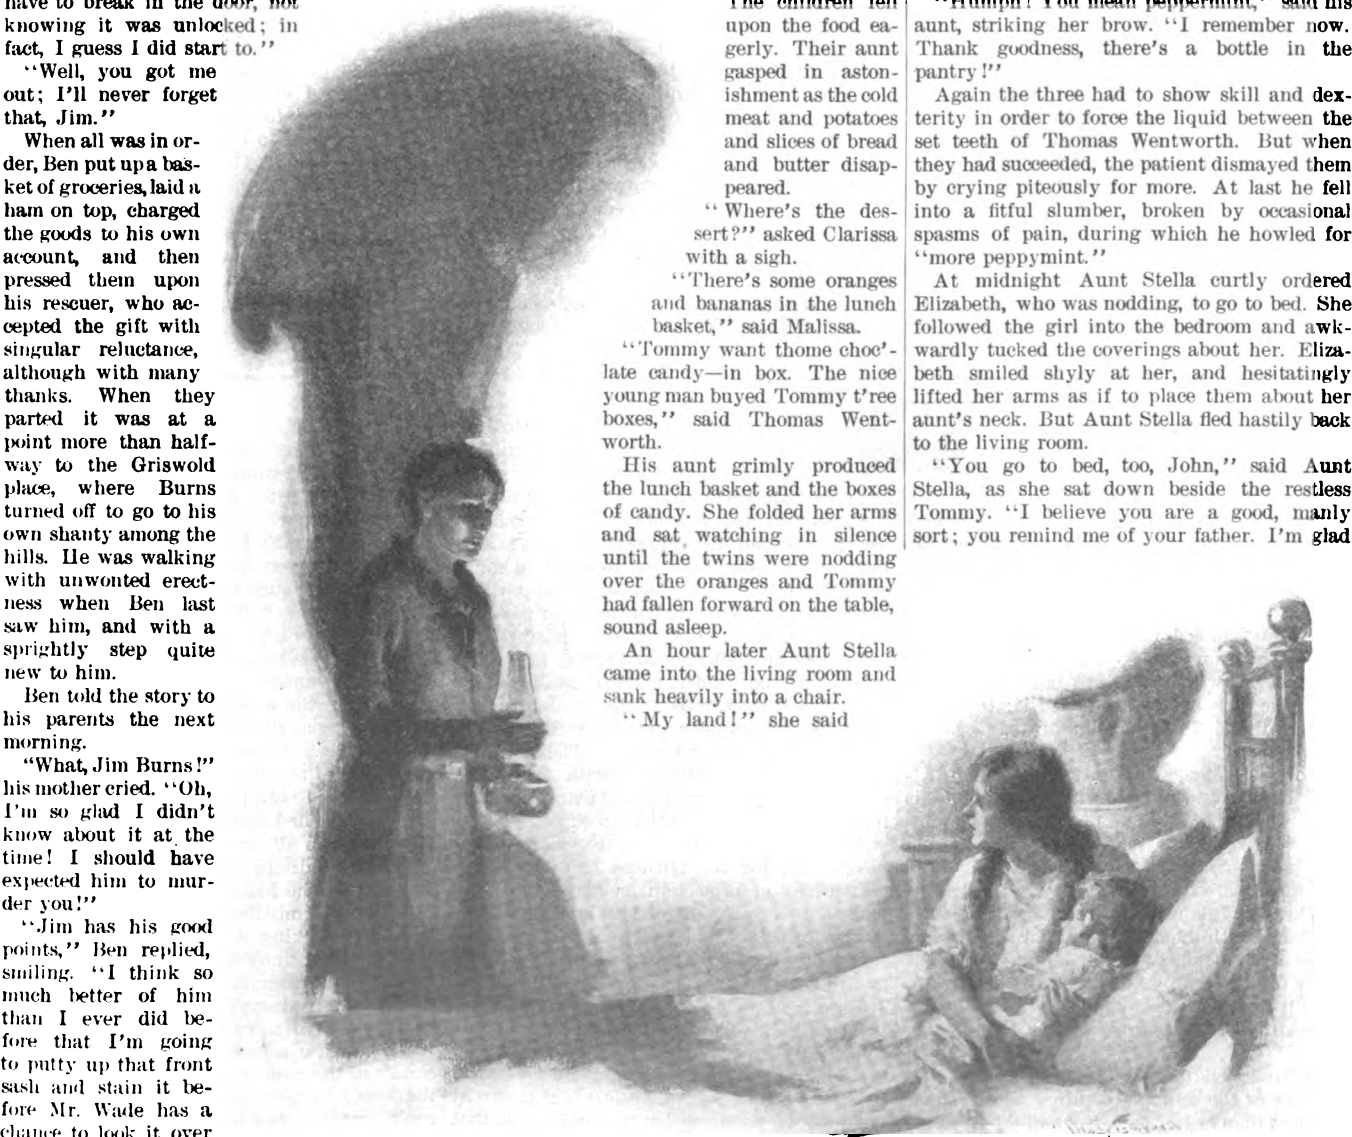

"I wash my dishes whenever I feel like it," said Aunt Stella. "And whenever I don't, they go unwashed until I do."

Suppressing an exclamation of housewifely horror, Elizabeth meekly followed her aunt from the room.

Stella's Pocket consisted of two hundred acres. From the southern edge of the level mesa the ground dropped in gigantic steps toward Digville; down and round the steps the trail writhed and twisted like an endless serpent. In that direction the eye could travel an almost unbelievable distance to the Big Horn Mountains. To the north the jagged, scarred bulk of Mount Shoshone cut the range of vision. Westward, after clearing the precipitous wall of the Pocket, the land continued, boulder-strewn and barren, in stair-like formation. To the east the ever-rising undulations were covered with forests of pine, spruce and hemlock.

Stella Jones had bought the claim from a wandering son of the West who had little idea of the value and future possibilities of the Pocket. For a small sum he willingly transferred to her his preëmption rights, and once more took up his travels. Stella eventually "proved up" on the land and received title to one hundred and sixty acres. The remaining forty acres were of course government land; but as the tract abutted the north wall, and could not be reached except by passing over Aunt Stella's holdings, there was little danger of its being preëmpted. Aunt Stella always regarded those forty acres as a part of her estate.

One hundred acres were in cultivation and under irrigation. At the northwest corner of the Pocket a stream of water from some hidden, snow-fed spring far up on the mountain plunged down the wall in a frothing cascade and splashed into a circular basin in the solid rock. Round this pool Stella had built an earthen dam that formed a reservoir for the storing of water during the summer season. A

DRAWN BY CHASE EMERSON

"ELIZABETH JONES, DON'T YOU DARE TO FRIGHTEN THE CHILD WITH ME!"

heavy wooden sluice gate, raised and lowered by a windlass, held the water back until she needed it to fill the tiny ditches that she had cut around garden, orchard and alfalfa fields.

In fall and winter the gate hung high in the air, and the escaping stream went racing through the main ditch, leaped down a steep incline, and disappeared beneath a ledge of granite. Seven miles away the water, again coming to the surface, formed the springs at the Jackson ranch.

The soil of the Pocket was a volcanic ash that had lain for ages awaiting the magic touch of water to awaken it to life; and vegetables, fruit trees, grains and grasses, thrusting their greedy roots into the rich, moist earth, thrived and produced in astonishing profusion.

Stella's Pocket was a picturesque, practical little oasis in a wilderness of towering, boulder-strewn hills. In common with most oases, however, it had the defect of isolation. It was eighteen miles from Digville, and Aunt Stella's nearest neighbor lived seven miles down the trail. But Stella Jones was not affected either by the isolation or by the loneliness of her Pocket.

"There's not a place on earth I'd rather be than right here," she often declared. "I don't believe I could live anywhere else, and I hope to end my days here and be buried over there by the west wall, where my grave will overlook the whole Pocket. I've got the exact place picked out."

"I made the first improvements on the place with my own hands," she told the children as she showed them about the premises. "Built the first reservoir. I've had it enlarged several times as I put more land under cultivation. Ploughed the first field, dug the irrigation ditches, set out the orchard and groves, planted the crops, put up the fences, and looked after my ponies, cows, pigs and poultry."

"Did you build the house?" asked John simply, turning to gaze at the startlingly modern cottage under the tall cottonwoods.

"Mercy, no!" cried his aunt. "You don't suppose one lone woman could construct a bungalow like mine? I had a contractor up from Cheyenne for that; and it's built out of a book," she added proudly. "The old log granary over there is the original claim shack. I lived there until four years ago."

The round-eyed children accepted her statements without comment. Everything was so strangely unfamiliar that nothing surprised them. However, a perplexed expression settled gradually over Elizabeth's face.

"But did you live here all alone?" she asked. "Without a husband—"

Aunt Stella paused abruptly and studied her niece for a time.

"Well," she said deliberately, "I've always heard it said that no two women could live under the same roof; but I never thought it would apply to a girl of twelve and a woman of thirty-five. Elizabeth, I can see that you are a regular little old maid. You've begun to criticize me already. Why shouldn't I live here alone, if I wanted to, even if I am unmarried? I was much safer here in the Pocket than down in the settlements."

"I—I was only feeling sorry for you!" stammered Elizabeth.

"Humph! I never could endure being pitied, either. There, now, don't cry," she said, as Elizabeth's eyes filled with tears. "You didn't mean anything."

Elizabeth drew her apron across her eyes. "I don't think it was exactly proper for a single woman to live alone," she said, with her chin in the air.

"Tut, tut, child! Being as we're only going to live together for a short time, there's no sense in our acting catty toward each other."

"I only meant that it seemed strange—" began the girl contritely.

"Oh, that's what I can't endure in women. They always apologize, or take a back track. A man would say a thing and stick to it."

"I'm not a man, and I don't want to be one," said Elizabeth, stamping her foot. "I don't want to look like a man, talk like one, act like one—or dress like one!" She swept the semi-masculine attire of her aunt with a glance of infinite scorn.

Aunt Stella stared at her niece with mouth agape. "Good gracious!" she thought. "Think of living day after day with a feminine thing like that! And it would be plumb torture for her to have to live with me, too." A wistful look crept into her eyes. "She's going to be tall and fair, with white hands. Oh, I've got to find a place for her at once—some rich old couple who will give her the pretty things a real womanly woman needs, and who will teach her to be a lady."

Aunt Stella led her nephews and nieces down the rows of thrifty fruit trees, past the strawberry beds, through the thriving garden; she showed them the poultry yards, the stables, the corrals, and the meadows where the sleek Jersey cows were grazing. In her pride and enthusiasm as an exhibitor of the wonders of the Pocket she even led them across the velvety green sweeps of the alfalfa fields.

John, striding along sturdily, with Tommy in his arms, took a keen, masculine delight in his surroundings. The twins raced and skipped, leaped over the gurgling irrigation ditches and rolled in the sweet-scented grass. Elizabeth,

shading her face carefully from the rays of the hot morning sun, tried to give a polite attention to her aunt's descriptions and explanations; but Aunt Stella soon decided that outdoor farm life had little interest for her niece.

"Elizabeth, you go to the house," she said suddenly. "I won't have you trailing round after me, pretending like you enjoy it. You might wash the dishes, if they are still preying on your mind," she added.

"Where in the world will I find a suitable home for that pretty little old maid?" she said

to herself as Elizabeth, with a sigh of relief, hastened away to the house. "Perhaps old Mat Masters and his wife will take her. They own the biggest house in Digville Valley, and are the only people I know of in this country who could give her the things she should have. But I can't go down there and throw her at their heads; that would look as if I were too anxious to get rid of her, and might prejudice them against her. I wish there were some way of making the Masterses really want to adopt Elizabeth."

TO BE CONTINUED.

AT THE EDGE OF THE CLIFF

By E.E. Harriman

EARLY that afternoon Willis Becker had taken his single-barrel, muzzle-loading shotgun—few of the settlers in Minnesota owned breechloaders at that time—and had set off on his skis through the woods after rabbits. Young Nil Arnetvedt, whom Willis's father employed as a chopper, had taught the boy to walk on skis and had helped him to make a pair like his own, which had come from Norway.

Willis had had good luck that day, and three white rabbits hung from his belt. His course had taken him halfway round the ice-covered lake that lay north of his home, and now he entered a patch of brush. There the going was bad; now and then some little twig that the snow had bent into a semi-circle would slip its loop over the toe of one ski and throw him headfirst into the depths of a drift. It was no easy work to get out of the snow bank with the seven-foot skis holding his feet up on the top.

He was proceeding at a slow pace when he happened to think of the effect that the plunges in the snow might have had on his gun. Standing with his back against a tree, he examined his weapon. The muzzle was filled for some inches with hard-packed snow, and after he had dug that out with his knife, he found the lock frozen up and snow all over the nipple. He soon had the lock working freely again, but the thought that perhaps the priming was wet worried him. Pointing the gun at a tree, he snapped the trigger. Surely enough, the charge refused to explode. Removing the cap from the nipple, he took a pin from his coat and pricked the nipple open; he worked a few grains of powder into the hole, put on another cap, and again tried to fire the gun—with no better luck.

Four times he primed and recapped with no success. Giving it up at last, he turned his steps directly toward the lake; he intended to cross it, climb the high bank and go home through his father's maple grove. He had not taken a step when he saw a dark shape slink out of sight in a thick patch of brush.

"Now what was that?" he said to himself. "It will be just my luck to see some valuable game when my gun won't work."

He had not gone far when he remembered that the bank along this part of the shore was from twenty-five to forty feet high and nearly vertical, and that the shore below was covered with boulders. He would have to run almost a mile east before he could get safely down the bank. Thinking that the traveling would be a little better farther back on the high ground, he swung off to the left.

He went up the slope to its highest point, which was a good half mile from the lake. But the going was better now, and he went along at a quick pace. Again he saw a dark shape flit across an open space at his left, and this time he swung over to see its track.

He found the mark in the snow, and started with surprise. It was broad and big and shaped something like a dog track. As he stood over the trail he glanced at the trunk of a fallen tree and saw that the snow piled on the top of it had been broken by something passing over it. He walked over to examine it more closely.

It was as he had supposed: two animals had leaped over the trunk, and their feet had brushed the snow. Willis looked along the trail to the east and back along the trail to the west. As he looked back, he saw two, then three, and a moment later four, animals come sneaking softly out of a thicket of prickly ash. There was no mistaking what they were. They were timber wolves—gaunt, hungry, savage!

They caught sight of him at once, and all

DRAWN BY H. C. EDWARDS

WILLIS SPED STRAIGHT ACROSS THE ROAD AND SHOT INTO SPACE

slipped aside into the thicker growth so quickly and silently that he hardly believed that he had seen them at all. Were they merely rabbit hunting, or were they after him?

No wolves had been seen in that part of the state for four years, but Willis remembered that a report had come from St. Cloud that the rabbits in the brush lands above there had suffered from one of their periodical epidemics this year, and that because of the poor hunting the wolves were bolder than usual. The creatures that he had seen were undoubtedly visitors from the famished land, seeking better fare.

He hoped that they would let him alone, but it was far from encouraging to know that three had passed ahead and that four or more were behind him. Swinging away from the marks of their broad pads, he made quick time to a point midway between the lake and the wolves' trail. Then he again went along his way to the low bank that was his goal.

He had gone only two hundred yards when he saw in front of him one of the wolves standing under a bush. As Willis checked his speed, the brute snarled menacingly and did not give ground. It was evident that it meant to dispute the passage with the boy.

The nearest house was still more than a mile east; the old couple who lived there were too feeble to come to the boy's help, but Willis thought that if he could reach their house he might get his gun unloaded, cleaned and dry. Then he would stand some chance of fighting his way through.

The wolf, with its head held low and its eyes shining, still faced him. Glancing round, Willis was startled to see five others behind him, and there were undoubtedly more in the brush. Deciding to try to pass the beast in front, he again turned that way, only to find another wolf beside the first. They had hemmed him in.

As a desperate chance, he again pricked dry powder into the nipple, put on a fresh cap and advanced boldly on the two creatures in front of him. When he was within a few steps they snarled and showed their fangs. Willis leveled the gun and pulled the trigger, only to hear the snap of the exploding cap.

In a panic at the sound, the wolves leaped away, but after a few jumps they checked their flight. But Willis had taken advantage of their moment of panic to leap into the sweeping stride of the ski runner; and even as they turned he shot past them, shouting and flourishing his gun. He went at his best speed in the hope that he might outdistance them. But the ice crust on the snow was thick enough to bear the wolves, and, starting after him at once, they easily held their own. Closing in, they turned him toward the lake.

His heart sank in despair, for he knew that if he let them drive him down to the edge of the steep cliff he was lost. There, unable to get down to the lake, he would have to turn at bay, and with his clubbed gun would stand little chance against seven or eight hunger-mad wolves.

Hoping to gain a little time, he tore the rabbits from his belt and, one by one, cast them behind him. But the manœuvre did not check the wolves for more than a second or two; then they were after him again.

As if they had known of the sheer, unscalable cliffs ahead, the running beasts bent the line of his flight more and more toward the lake. Presently the chase brought them to an old woods road that ran down to the top of the cliff and that then turned east, along the edge.

As Willis came to the road, an idea flashed into his mind. Instead of crossing it at an angle, he turned directly down it. He knew every tree along the road, every stump and woodchuck hole that it showed in summer. He had formed a plan—a desperate one, it is true, but there was a chance that it would succeed. As he sped along, he tossed his gun on a brush pile close to the road and saw it disappear in the snow. He could find his gun if he won his fight against the wolves, and if he did not—well, some one else would find it.

The wolves had swung into the trail behind him and were closing in. Willis gave one quick glance over his shoulder to see, not whether they were far enough away, but whether they were near enough for his purpose. They were only a little distance behind him, and the leader snarled as the boy looked round.

Ahead Willis saw the turn in the road. There the forty-foot cliff dropped squarely away from the road. A big basswood tree that grew out of the base of the precipice towered slantingly over the ice until the top of it was well above the level of the road and twenty feet out from it.

With a yell and a derisive wave of his hand Willis sped past the turn, straight across the road and, with his skis brought sharply together and the toes pointing directly ahead, shot into space. There was a sound of snapping twigs, tearing cloth and breaking branches, as with a gasp and a whoop Willis lodged safe in the top of the big basswood.

Behind him the pack had been striving to reach him, to bring him down before he could race farther; in the last thirty yards of the chase they had pressed so close that when they saw the earth vanish beneath their noses they could not check their rush. Over the brink, helter-skelter, shot four, six, seven, of the creatures. The eighth just managed to save himself by throwing himself to one side. When he saw the falling bodies of his mates, he gave a quavering howl and fled into the woods faster than he had pursued.

As Willis clung to the branches and tried to regain the breath that had been knocked from his lungs, he looked down at the bodies of the wolves among the rocks and boulders. Three of the creatures were so badly crippled by the fall that they could only lie there, snarling. The other four, limping and bruised, were dragging themselves away at the best pace they could make.

Loosening his skis, Willis dropped them on the snow and then slid down the tree himself. He sped swiftly across the lake and hurried up to the house of a man who owned the first breech-loading rifle that had ever come into that part of the country. Hastening back with the gun, he dispatched the three crippled wolves. He took up the trail of the other four, and within two hours had brought one of them down.

When he sold the skins and collected the bounty on the scalps, Willis bought himself a breechloader. He had decided that he would never again be caught with wet powder.

FACT AND COMMENT

ONLY the man who is in the wrong must win at once. Those who are right can afford to wait.

The Student, having learned where Treasure is, Must work with Pick and Spade to make it his.

IF a man is forever telling you what he is going to do to-morrow, it is a waste of time to ask him what he did yesterday.

NO housewife should let the increased price of sugar keep her from preserving all the fruit and berries that she can get. A little figuring will show her that the increased price of sugar is about half a cent to the quart jar.

THIS year rounds out a century of steam-boat navigation on the Great Lakes. The pioneer craft in the business that has grown to such enormous proportions was a crude little side-wheeler, the Ontario, built at Sacketts Harbor.

A SUBSCRIBER sends us an admirable suggestion how women may salute the flag. "Some one," she writes, "—was it not Edward Everett Hale?—has urged that girls and women salute the flag by standing erect with the right hand over the heart, 'because the real salute is in the heart, after all.'"

WAR has always made the crop problem more difficult. The recently published history of an old New England town relates that the neighbors of a man who enlisted in the Revolutionary army were accustomed to take it on themselves to prepare his land for planting and to harvest his crop before they planted their own fields and harvested their own crops.

THE great clothing manufacturers who determine the styles for men's garments are agreed that the war will considerably modify next year's fashions. Because of the anticipated scarcity and high price of wool, there will be no patch pockets, no cuffs on coat sleeves and no turned-up trousers. If the war lasts two or three years, there will be no pockets of any kind. They will not be needed.

THE Lancaster turnpike, which runs westward from Philadelphia,—one of the last of the historic turnpikes of a century ago,—will become a free state road on July 1. Turnpikes and toll bridges served a useful purpose in the early days, when private corporations did the work that taxpayers could not afford to do, but the few that survive are now as out of place as an ancient blunderbuss would be in modern warfare.

THE Y. M. C. A. has long followed our military forces wherever duty called them, but in the case of France it was able to precede them. Last month a score of American Y. M. C. A. workers left Switzerland, whither they had gone from Germany and Austria when the United States entered the war, and went to northern France to prepare buildings and equipment for the coming of the American troops. Here at home, at the training camps, the Association has put up two hundred buildings for its work during the coming months.

"SEEKING sanctuary" was formerly a common practice among criminals and also among those who were unjustly pursued or persecuted. The fugitive availed himself of that provision of the law under which he could not be taken from a church or an altar. It was a broadening of the old Jewish law that established the cities of refuge of the Old Testament. No one would have expected able-bodied young men in free America to take advantage of it, but many of them have tried to do so. So many young men subject to conscription have applied for admission to the Society of Friends that the Quakers, with the excellent

common sense that they usually show, plan to admit no more to membership until after the draft goes into effect.

KAISER KARL'S DILEMMA

THE young ruler of Austria is in a dilemma; he inherited from his predecessor a suicidal policy that could lead only to Austrian subservience to Berlin in case of a German victory, or to the collapse and partition of the Austrian dominions in case of a German defeat. He and his family stand to lose in either event. Hitherto the strength of the Hapsburgs has lain in the loyalty of their purely Austrian subjects; probably it lies there still, although there is a loud pro-German party that is eager for the formation of *Mittel-Europa* and the virtual absorption of Austria by the German Empire. That party is disgusted at the Emperor's convocation of the Reichsrath,—which has not met since the war began,—for the Reichsrath contains more Slav and Dalmatian members than Germans, and is not enthusiastic over the idea of Prussianizing Austria.

The Russian revolution has of course deeply stirred all the Slavic peoples of Austria. Kaiser Karl knows that, and he fears to provoke his Slav subjects by a policy of repression. That would lead in turn to uprisings,—Bohemia is already said to be under martial law,—and should the Slavs of Austria rebel and call on their Russian brothers for help, the last chance of a separate peace with Russia would be gone. The Kaiser would have to call on Berlin for help—and that would be the end of him as an independent sovereign.

The young Emperor has thought it safer to offend his pro-Prussian subjects; that he has done so we gather from the grumbling comments of the German papers, which see in his policy a coolness toward the magnificent project of a great mid-Europe controlled from Berlin. Of course he takes risks in doing so. A victorious Prussia would punish him for his lukewarmness at this critical moment; but he must take one horn of the dilemma or the other.

Hungary is also in political turmoil. It does not seriously object to the dominance of Berlin; completely surrounded by Slavic and Germanic peoples, the Hungarians' best chance of safety is in a firm alliance with the strongest of their neighbors. But the democratic ferment is working strongly in Hungary. The masses of the people are clamoring for electoral reform and a wider popular control of the government. There is a strong parliamentary party pledged to the same ends and led by able politicians. The premier, Count Tisza, as impervious a Tory as lives, has resigned his office rather than make any concessions to the new spirit of liberty. Old Franz Josef would have supported him to the end, but the young Emperor seems on the whole to have speeded the parting premier. The grief at Tisza's downfall was more poignant at Berlin than at Vienna.

The fate of the democratic movement in Hungary hangs on the results in the battlefield. A sweeping German victory would make autocracy safe for another generation; German military failure would promptly be followed by the liberalizing of Hungarian institutions—perhaps by erecting Hungary into an independent democratic state.

CONDUCT IN GAMES

IT is an old saying that language was given us to conceal our thoughts, and it is equally true that manners were given us to conceal our characters. Some of us do not find our manners always quite adequate to the task.

Few things reveal the character more than games, because in playing them we are not so much on our guard as in the greater crises of life. It is a drawback to the great American game of baseball that tempers are not always so completely veiled under politeness as they should be before several thousand spectators.

But the principle comes somewhat nearer home to many of us. When you play golf, do you never insist upon a trifling advantage that might well be passed for the sake of good feeling? Does your voice never get a bit louder or a bit harsher than you mean it to get? In tennis there are a good many doubtful decisions and forgotten reckonings. Do you sometimes make them of more consequence than they really are, or, in yielding them, do you make your opponent feel that you are glad to do it?

Not that you should not play any game with all the energy that is in you. Play to win, if you play at all. Even a peppery antagonist is less exasperating than one who patronizes you by letting you have the victory.

But either winning or losing can be done

with courtesy. If you have the worst of it, do not enlarge upon how very badly you played. It is possible that your opponent may have played better. There are some persons who keep deploring their bad play when they are having the best of it, and that is not complimentary either, when you come to reflect. In short, there are a hundred little ways of letting your manners conceal your character in games, and everyone appreciates and admires them—in others.

To be "a good sport" is quite essential to the make-up of a gentleman, and it does not hurt a lady.

THE TRAINED WOMAN

FIVE years ago a group of graduates of women's colleges, recognizing that both in quality of work and in rate of pay the teaching profession was being injured by overcrowding, organized in New York City the Intercollegiate Bureau of Occupations "to investigate the present conditions of women's work, to develop new opportunities and to secure positions for educated women in pursuits other than teaching." Its success in all three directions has been so great that its five years of existence is a history of changes that are almost revolutionary. Financed by college women and by representatives of many occupational groups, and cooperating with similar bureaus in eight other cities, with other organizations in New York itself, and with appointment bureaus in the colleges, it has placed thousands of women in positions that represent an amazing variety of work and that are as far away as Canada and Hawaii. It has interviewed and advised a still larger number, has published studies of various kinds of work for women, and has embarked on nothing less ambitious than complete records of the subject, to be kept abreast of the ever-changing conditions.

But in spite of its success the bureau finds many fields in which the demand for women is greater than the supply. For example, it cannot begin to fill the applications that come to it from business houses or those that call for household administrators; it has scarcely a woman to offer for any one of the great number of opportunities in industrial, agricultural and biological chemistry; it cannot supply philanthropic societies with women who are both college graduates and trained nurses.

Those facts mean that almost every college woman, unless she intends to be a secretary and therefore has to take the indispensable brief course in typewriting and stenography, expects immediately to fill a position acceptably to herself and her employer, and thereby to earn a livelihood, without any special training. Her brother knows that, to command a good salary in later life, he must, on leaving college, either study further for his chosen occupation, or accept nominal wages, or none at all, while he gets his training by "learning the business." With the possibility of marriage in mind, women do not follow the example that college men set. The result is that they have to accept work that can never pay well and that too often is also a misfit.

The remedies for the maladjustment seem to be of two kinds. Women will probably see more and more the need of taking the "long view of life"; that is, of realizing not only that a woman may never marry but also that marriage may not provide financially for herself and her children; and so, in increasing numbers, they will take time for special training.

Together with that change of attitude on the part of women, there is likely to be a change of attitude on the part of the colleges. For a large number of professional occupations the present requirement of a general course lasting four years and followed by some years of special training is altogether too exacting, both in time and in money. The college must alter its curriculum so that students can either graduate in two or three years, or else get their professional training, or part of it, along with their undergraduate work.

PETTY THIEVING

WHETHER the turning of so many people to gardening who have never done any gardening before results in an appreciable increase of the food production or not, it should improve the moral standards of many. A large number of boys and youths who have been in the habit of foraging in vegetable gardens and fruit orchards without getting the consent of the owner or making any recompense for what they take are likely to be put to work on the farms or in the gardens, and through that experience they will

learn to appreciate the farmer's right to his produce. Working in a garden is an occupation that conduces to respect for ownership; it enforces upon the worker a moral perception of the fact that the fruits of the earth do not grow freely for whoever happens along.

Robbing orchards and gardens has not been exclusively the diversion of the irresponsible small boy and the undisciplined village or city loafer. Farmers all over the country have complained of the depredations committed by people who come in automobiles and carry off strawberries, raspberries, corn, pears and apples, according to the season. Such thieves *de luxe* work usually on Sunday. "Day of rest!" exclaimed an indignant victim. "It ought to be the day of arrest! But it never is. They always get away with it."

The garden or orchard thief who uses an automobile in making his "get-away" is less likely than the corner loafer to be legitimately busy on some one's land this summer. But perhaps he will be drafted for military service.

OUR UNREALIZED FOOD RESOURCES

A MAN of experience recently remarked that this year he purposed to plant a part of his garden with field corn and in the fall to buy a large coffee mill. That done, he should feel secure against famine or prohibitive prices of food next winter. His hearers smiled, because he is well-to-do and used to comfortable living. But there was something more than jocular extravagance in what he said. He has traveled widely and observed with interest the grains men use for their staple food. With the possible exceptions of wheat and rice, he has nowhere found so palatable and nutritious a grain as Indian corn. He has used it increasingly himself, and he never grows tired of it.

A careful study of the unrealized possibilities of our home-grown products is a matter of first-rate importance this year, when the wheat crop not only of the nation but of the world is almost certain to be scanty. Even at present prices an amount of Indian corn sufficient for service on the family table once or twice every day can be had for a very moderate sum. Ground coarse at any local mill, or even in a coffee mill, it becomes the hominy or sump of the early New England settlers. When it is sifted, the finer Indian meal comes away and can be set aside for corn bread, hasty pudding (upon which an American poet once wrote an epic), or the corn pone and spoon bread of the South. The coarser hominy, after being covered with water so that the hulls of the grain may rise and be skimmed off, should be boiled, first hard for a short time, and then slowly for hours, until each particle is cooked through. In the process it is of course salted, and then can be eaten with milk or fried and served with some variety of syrup. The novice should remember not to lay in any large stock of hominy at one time, for it tends to grow musty.

Besides sump and Indian meal there is the hulled corn of New England, or "big hominy" of the South. To make it, the corn is first boiled with an alkali—wood ashes were once used, but baking soda will do as well—and then washed in five or six waters. In the process the alkali is removed, the hulls come away, and the grains swell to twice or thrice their normal size and provide a capital dish when properly salted and eaten with milk or as an accompaniment to a meat course. Children almost always respond to the invitation of dishes made of corn, and the man whose appetite has not been too much corrupted realizes anew when they are offered him what Emerson meant in saying "wholesome as maize."

The sweet corn of our gardens should not be despised when it has grown too old to appear as "green corn" on our tables. It may be ripened, picked and hung up by the husks, when they have been stripped back, so as to be out of the way of rats and mice. If it is shelled in midwinter and roasted in a spider over a brisk fire, the kernels, swelled and rounded by the heat, will be found to retain their summer sweetness; and when ground in a hand mill and eaten with milk, they furnish a very nourishing and wholesome food.

Such are two or three articles that are far more nourishing than many "breakfast foods" and that can be prepared at a minimum cost in most households. Another article of food as useful and inexpensive as it is despised is skimmed milk. Some cities have gone so far as to forbid the sale of milk from which the cream has been removed. They justify their action on the ground that it is difficult to maintain a standard for skimmed milk and that it

can easily be watered or otherwise adulterated. Nevertheless, skimmed milk of decent quality is a highly valuable food. The fat is gone, but the lean, strength-giving casein remains. That is the element, rich in protein, which makes cheese, which in turn is one of our best substitutes for meat. When whole milk reaches such prices as it now commands, true economy dictates that as large a supply as possible of sweet skimmed milk should be made available; and he who has learned the possibilities in milk and maize may laugh at famine.

CURRENT EVENTS

CONGRESS.—The so-called espionage bill, with a provision for an export embargo to neutral countries trading with the enemy, was passed by both houses.—The war budget bill hung fire, owing to the unwillingness of the House to accept an appropriation for the purchase of the Jamestown Exposition site for a naval station, but passed at last on June 13.—The Finance Committee of the Senate finished its recasting of the war revenue bill, and the food control bill was reported to the House. The bill gives the President power to fix a minimum price, if necessary to stimulate production. In place of a maximum-price provision there is one that punishes the hoarding or cornering of supplies, and gives the President power to close the exchanges, if speculation grows excessive.

WAR PREPARATIONS.—The revised total of the registration under the selective draft law will be about nine and a half million.—On June 8 Gen. Goethals, manager of the emergency fleet corporation, removed two of his assistants, Mr. F. A. Eustis and Mr. F. Huntington Clark, because they had publicly criticized his decision to build steel ships rather than wooden ships. Rear Admiral Rousseau was appointed as first assistant to Gen. Goethals.

During the week contracts were given for twenty steel composite boats and sixteen wooden vessels.—Lord Northcliffe, commercial representative in this country of the British government, arrived June 11.—President Wilson has made a number of military and naval promotions, in anticipation of the dispatch of an American division to France. John F. Morrison, Charles G. Morton and William L. Sibert are the brigadier generals promoted to be major generals.

RUSSIA.—During the week President Wilson's note to the Russian government was published. It urged Russia not to abandon the struggle against Germany, and laid down as America's peace views that no people must be forced under a sovereignty under which it does not wish to live; that no territory must change hands except to give those who inhabit it a fair chance of life and liberty; that there must be no indemnities except in payment for manifest wrongs done; and that there should be no readjustments of power except such as will help to secure the future peace of the world and the welfare of its peoples. The British government sent a note to Russia associating itself with President Wilson's views.—The situation in Russia became more hopeful. A congress of peasants and the alliance of commercial, industrial and banking institutions, both in session at Petrograd, reaffirmed their loyalty to the existing government, and called for an energetic prosecution of the war. The state of discipline in the army is said to be much improved, and there were indications that War Minister Kerenski and Gen. Brussiloff were preparing for a forward movement.—The two American commissions, one political, headed by Mr. Root, and the other made up of engineers, headed by Mr. Stevens, reached Petrograd on June 13.

SPAIN.—Marquis Prieto, the premier of Spain, resigned on June 9. Eduardo Dato, a former premier, agreed to form a new cabinet.

CHINA.—On June 13 President Li Yuan-hung agreed to dissolve the parliament in compliance with the demands of the military governors. Wu Ting-fang, the acting premier, was unwilling to countersign the mandate and resigned. Chiang Chao-hung, his successor, countersigned it. The southern leaders declared that they would no longer recognize President Li's authority.

GREECE.—In response to the demands of the Entente Powers, expressed through M. Jonnart, their special representative at Athens, King Constantine abdicated the throne on June 12. He is succeeded by his second son, Prince Alexander, the Crown Prince being

considered objectionably pro-German. The change was accepted quietly in the Greek capital.

MINE DISASTER.—Fire broke out in two of the mines of the North Butte Mining Co., Montana, June 8. Nearly two hundred miners were unable to escape.

THE GREAT WAR

(From June 7 to June 13)

No sooner was it announced in Berlin that the Allies' offensive was stopped, than it broke out again more furiously than ever, between Ypres and Armentières. At that point Germans occupied a salient some seven or eight miles wide, which included the Messines-Wytschaete ridge, the most commanding elevation in the vicinity of Ypres. For some months the British engineers have been systematically mining this entire front. On June 7 one million pounds of dynamite were exploded in these mines, and the German first-line trenches were blown into the air. A tremendous cannonade preceded and followed the explosion. Under cover of this bombardment the infantry pushed forward, and with very little opposition took the ridge, the villages of Messines, Wytschaete and Oosttaverne and other positions, to a depth in some places of three miles. The Messines salient was completely wiped out; in fact, the line now bends slightly the other way. The British took seven thousand prisoners, and the German losses in killed and wounded were also heavy.

The disorganization of the German front was so severe that no counter-attacks of importance were made for two days, and they were then repulsed without difficulty. Gen. Plumer, who was in charge of the operation, reported that all the positions taken on June 7 were successfully "consolidated."

Trench raids were reported at other points on the British and French fronts, but in comparison with the engagements at Messines they were of slight importance.

The Austrian counter-attacks on the Carso plateau seem to have brought Gen. Cadorna's advance to a halt. Vienna declared that its troops had regained some of the positions lost during the previous weeks, and that twenty-seven thousand Italian prisoners had been taken within a month. Meanwhile, finding the Austrian concentration on the Carso so formidable, the Italians began another movement, this time in the direction of Borgo in the Trentino. Rome declared that they had seized the Agnello Pass, and were therefore overlooking the Val Sugana, from which they had to retire a year ago.

Italian troops are occupying Janina, the capital of Epirus, and the government of Greece has protested. Rome announced that the occupation was necessary in order to assure order in the adjoining district of Albania.

Gen. Pershing and his staff arrived safely in England on June 8, and in Paris on June 13. He was received everywhere with especial honor. The collier Jupiter, loaded with supplies, arrived safely at a French port on June 7, and the preparation of camp for the American expeditionary force is going forward. One hundred American naval aviators have also reached France.

Among the ships sunk by the German submarines during the week was the American schooner Magnus Manson and the oil steamer Petrolite. The Leyland liner Anglian and the French liner Sequana were also reported sunk, with a loss of about 200 lives. At least two Norwegian vessels, a Danish steamship and an Argentine sailing ship were sunk. London announced that 32 British ships had been sunk during the week, and Rome announced the loss of 10 Italian steamers.

Air battles were a conspicuous part of the battle of Messines, and the British squadrons have established a decided superiority there. Fifteen German aircraft raided the east side of London on June 13 at midday; 97 were killed and 437 injured by their bombs.

Former Premier Laurier of Canada declined to enter a coalition cabinet; accordingly Premier Borden took the responsibility of introducing a bill enacting compulsory military service for Canadians between the ages of 20 and 45. Mr. Patenande, a member of the cabinet, resigned rather than support the bill.

On June 9 the Cuban Congress voted a war loan of \$30,000,000.

Revolutionary outbreaks, occasioned by a desire for independence, are reported to have occurred in Prague and other Bohemian cities.

Count Andrassy finding it impossible to form a cabinet, Count Moritz Esterhazy was appointed premier of Hungary on June 9.

Street riots in Stockholm followed the refusal of the majority in the Riksdag to give favorable consideration to the Socialist demands for a reformed and extended franchise, for a revision of the constitution, and for laws shortening the workday.

Sailors belonging to the Seamen's and Firemen's Union refused to sail the vessel on which J. Ramsay MacDonald and F. W. Jowett, the British delegates to the Socialist conference, were to sail for Stockholm, unless the two men would agree to insist on restitution by Germany for the seamen killed and the destruction caused by the German submarines.

A Tire That Fulfills Expectations

USUALLY the man who buys a Goodyear Tire has a very definite and sensible reason for doing so.

He has noticed that Goodyears outnumber any other tire on the motor cars in his neighborhood, or some friend has told him of their goodness, or he has used them himself, and knows from personal experience that they last longer and give more mileage.

In any case, he comes to Goodyears expecting more than he could hope for from any other make of tire.

The fine part about it all is, that the Goodyear Tire he buys will not disappoint this expectation.

It is built to deliver more than he could get from another tire, and it invariably does so.

Because it does so, more Goodyear Tires are sold in America than any other brand.

And the margin of Goodyear leadership is widening day by day.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

GOODYEAR

E PLURIBUS UNUM

By John Clair Minot

LAND of the brave and free,
How shall thy motto run?
"Many states shall there be,
But a nation ever one!"

Ay, and more can we trace;
Thus shall the motto run:
"Many and many a race;
One people—and only one!"

"Many a party brand,
Many a civic call;
One love for our native land,
And the flag that shelters all!"

"Many our human needs,
Many a prayer as we plod,
Many the churchly creeds—
But the one and only God!"

MORE THAN GOODNESS

"I DON'T see the use of it all," the young man said to his pastor. "Why should I go to all those meetings at the church and to the Sunday school? I can be a Christian without doing all that. I can put in my time more usefully with books and outdoor life on Sunday."

"I don't say," his pastor replied, "that you cannot be a Christian unless you do all those things; but you cannot afford to neglect them if you are to be fully equipped for the best Christian service. The church is a training school for efficiency in religious activity."

Six years went by; then a letter came to the pastor from a Y. M. C. A. secretary, a part of which was as follows:

"Can you send us for the field out here a young man who can measure up to great things? We want a young man who loves men and boys, and has worked with them long enough to prove his power as a soul winner. Don't send us one who is simply a good young man. We want something more effective than mere goodness."

A few days after that letter came, the pastor received a call from one of the members of his church, the father of the young man who six years before had argued that he did not need to engage in the activities of church organization in order to be a Christian.

"John is a good fellow," said the father anxiously, "but he hasn't done as well as we had hoped he would. His mother and I want to get him into a better place than the one he has now. You couldn't recommend him to a position, could you? He would like church or association work."

"What can John do?" asked the minister.

"Well, he is a good boy."

"But what can he do? Has he had experience in teaching boys in the Sunday school?"

"No, I think not."

"Did he ever belong to a young people's society, and learn how to organize committee work or solve religious problems?"

"I'm afraid not."

"Could he fill a position like this one?" and the pastor read the Y. M. C. A. letter.

The father's face became thoughtful.

"I know John could not meet those requirements. They are too exacting. He hasn't fitted himself for them; he has missed his chance."

The father went away, pondering on his son's unusable "goodness"; and the pastor found among his active workers a young man who measured up to what is proving to be one of the greatest places of influence in the Chinese nation.

The time has gone by when any type of mere goodness will do for modern reform, or missionary or evangelistic service. It is even more true now than in Timothy's time that the gigantic task of Christianity calls for "Workmen that need not be ashamed, . . . prepared unto every good work."

A POSTGRADUATE COURSE

WHEN the letter came Louise was stunned. She had worked so hard to save the money for the summer course! She had it all planned, her boarding place engaged, her mileage bought. Why, she was almost there. And then to have to give it all up!

There was nothing else to do. It was impossible to get help at Freeport, and blind Uncle Charlie could not take care of things while Aunt Rachel was "getting over" a sprained ankle.

"Dear, I'm so sorry!" mother cried with tears in her eyes.

"Of course, there's nothing else to do," Louise replied in a hard voice.

She started that afternoon. Fortunately, she had to travel all night; it was fortunate because it gave her time to remember how Aunt Rachel had left Uncle Charlie at a neighbor's and hurried down to help them when mother had the grippe and Richie had scarlet fever at the same time.

"I ought to be glad to be able to pay that back," Louise acknowledged, "and," she added grimly, "it is paying it back."

When she reached Freeport, however, the gratitude of Aunt Rachel and Uncle Charlie made her ashamed. She petted them both and made events of the meals, and exclaimed over the old garden, and congratulated herself that she was not letting them guess. She did deceive Aunt Rachel, whose adoring eyes followed her happily; but Uncle Charlie, in his shadowed world, had ways of discovering things that most persons did not know. Out on the piazza one evening he surprised her.

"I'm afraid it was harder than Aunt Rachel realizes—your coming to us, little girl," he said.

Louise started. "Why—I always have loved to come here!" she cried.

Uncle Charlie smiled. "I'm not asking you. And I'm not worrying—much." His voice had a wistful note that caught at the girl's heart. "You see, I'm years ahead of you. And I've learned that, when something is taken away, there is always something else given."

Uncle Charlie went in to Aunt Rachel. He could not see the startled face that Louise turned to the old garden, but perhaps he knew.

Six weeks later Louise went home—the very day when she had expected to be returning from the summer school. Mother remembered—mothers always remember. Louise smiled.

"I've learned to put up six kinds of preserves,

make rugs and do up laces. I practiced story-telling, and learned heaps about gardens, and gave a teacher-training course of two weeks that gave me, I'm afraid, far more than it gave the teachers I pretended to be training. And I took a course in village civics of Uncle Charlie, and learned how paper is made at the mills. Maybe, after all, that's more than I'd have learned at summer school even if I didn't get any certificate," she declared.

"Child, dear!" her mother cried.

"Yes'm, it's true," said Louise, and her eyes, like her mother's, were shining.

CATHERINE BRESHKOVSKAYA

I WAS present in the grim court in the Liteiny Prospekt in Petrograd in the spring of 1910, writes a correspondent to the Manchester Guardian, when sentence was pronounced on Catherine Breshkovskaya. I shall never forget the stoicism of this wonderful old lady. The judges, representative of the various social orders, each dressed in the uniform or costume pertaining to his class, filed into their places on the bench. Mme. Breshkovskaya and her fellow prisoner, M. Tchaikovsky, stood when the president rose to read the sentence. The stillness was unearthly.

After a brief résumé of the case the president announced the acquittal of M. Tchaikovsky. Turning to Mme. Breshkovskaya, he said that, as she had pleaded guilty to and even glorified in her membership in the Central Revolutionary Committee, there was nothing to do except to pass sentence of banishment. Throughout the reading of the sentence the dignified old lady looked straight at the president and only momentarily lowered her eyelids when the decree of banishment was pronounced.

A well-known press correspondent and I were permitted to talk to her for a few minutes. She was plainly gowned in black, with a cameo brooch at the throat. Her hair was quite white, but she had a pink complexion that a debutante might have envied. She smiled most sweetly and, speaking perfect English but pronouncing each word separately and distinctly, said:

"I am so glad to greet you, and to speak English with you. It is many years since I have spoken your language. I am so happy because you have come and spoken to me."

In reply to our expressions of sympathy, she remarked:

"Do not let this trouble you. I have been through it all before."

The guard intervened, but just before she was led away Mme. Breshkovskaya leaned over the edge of the dock, kissed each of us on the forehead and cheerfully wished us "Good-by!" Friends in England and America sent her gifts of money and clothing to her far-away place of banishment, but she gave the money to her fellow exiles, and all she would accept of the clothing was a set of woolen garments.

AN ARCTIC RESCUE

IN the dreary, isolated region of Lake Minto, twenty miles across country from the Tanana-Fairbanks trail in Alaska, says the Red Cross Magazine, a solitary trapper was struggling through the snow. He was heading for a cabin that he knew was near the lake; he planned to rest there and to eat a bite from his pack.

"Vacated!" he grunted, as he kicked through the drifts and, pushing against the door, stumbled into the dark interior. He struck a match, and as it flared he was startled by a moan.

"Who sent you? How did you know?" came in a frenzied voice from a bunk in the corner.

"Who is it—Monte?"

"Yes," was the answer. "Both my legs are frozen. Can't move. I've been here since yesterday morning. Get me to Fairbanks quick or I'm done for."

The trapper struggled eighteen miles for help to the Minto road house. At that point, Hammes, the proprietor of the house, took up the journey, covered the remaining twelve miles to the Minto signal station, and reported the case of old Monte. Early the next morning, with the dog team and a light sled filled with furry robes and containing the first-aid kit, Hammes and Corp. Cox, the operator in charge at Minto, left the station. They reached the road house by noon, and there the trapper volunteered to guide Cox to Monte's cabin. The two men set out across the trackless flats, breaking trail in the face of a ripping wind.

Cox and the trapper and the dogs reached the hut at seven o'clock in the evening, having traveled the last four and a half hours in darkness. They found old Monte as the trapper had left him; he was suffering intensely, and had not slept for fifty-six hours. Cox at once administered morphine, and as the man fell into the much needed sleep the rescuers set about dressing the frozen limbs.

Cox did as much as he could for the woodsman, and early the next morning, beneath fading northern lights, put his patient on the sled and started for the Fairbanks trail. By mid-afternoon he made the eighteen miles to the road house. There Monte was again treated, and in the morning Cox started alone with the injured man for Fairbanks, forty-seven miles away. That day he covered forty miles, and stopped for the second night at Esther Creek road house. By nine o'clock the following morning they reached Fairbanks, and old Monte was receiving the best surgical and nursing care that the hospital could supply. In the end he had to lose both feet, but he lived.

Within a few weeks the President of the United States learned of Corp. Cox's exploit, and awarded him a certificate of merit, which not only is a most distinguished honor, but carries with it an increase in pay.

EXPLOSIVE COAL

IN reviewing his early life in Constantinople, Sir Edwin Pears tells an amusing story of a coal contractor who was supplying the British fleet with fuel. A commissariat officer on one occasion went to him to say that a man-of-war had just arrived in the Bosphorus and was ordered to proceed to the Crimea with distinguished officers on board; but it was short of coal. The contractor answered that one of his small sailing vessels had just arrived laden with a cargo of coal, and that he would arrange to have it discharge the fuel directly on board the man-of-war.

A day or two later, when the contractor saw his manager, he asked what had been done with about ninety kegs of gunpowder that had been stowed on the top of the coal.

"Oh, we found all the kegs empty," said the manager. "There was no powder to remove."

During the next three weeks the contractor lived in constant dread. He feared that every ship coming

from the Crimea would bring news of an explosion on the man-of-war and an order for his arrest. He became ill from anxiety.

One day, a fortnight later, he heard with fear and trembling from his inner office the voice of the commissariat officer asking to see the merchant who had supplied the ship with coal. He put on a bold face and went out.

"Yes, you're the man," said the commissariat officer in a loud voice. "You gave us three hundred tons of coal. It's the best we have ever had. Instead of our having to stop the ship while we cleared the funnels, whenever there is a new firing up, the smoke goes with a puff and clears the funnel itself. I want three hundred tons more, but, mind, it must be of the same quality."

THE LARGEST GEYSER IN THE WORLD

WHILE the Waimangu Geyser in New Zealand lasted it was the largest in the world. Its name, "black water" in the Maori tongue, came from the dark column of water and debris that it threw up at every eruption. Stones and boiling water, accompanied by vast clouds of steam, rose nine hundred to fifteen hundred feet at irregular intervals, twenty or twenty-two times a month. At other times the water of the Waimangu lay in a cup-shaped depression about twenty feet deep, two hundred and forty-nine feet wide, and four hundred and two feet long.

Several hours before each eruption the lake would begin to boil violently and to send off dense clouds of steam; loud subterranean rumblings were heard. When the final explosion came, the

THE WAIMANGU GEYSER IN ERUPTION

whole lake, mingled with material from below, rose bodily; its torrential fall was destructive to a large area round about, and the slopes near by are still furrowed by the rivers of water that coursed down them. The column of water was thrown up about four times as high as the Giant Geyser, now the largest in the Yellowstone Park, throws its water, and the area of its base was about two and a half acres, in comparison with the few square rods of the American geyser.

Close by the geyser is a hill surmounted by an iron hut, about four hundred and fifty feet above the pool, where observers took refuge during eruptions. One day in August, 1903, a party was on the slope below this building watching the boiling pool. As the approach of the explosion became more imminent the guide warned them back, and all except four obeyed. The mother of one of the young ladies called to her; but she wanted to take another photograph, and answered, "Just a moment, mother." During that moment the eruption occurred, and the disobedient young lady and her three companions were swept to a tragic death.

CONSERVATION OF ENERGY

IT was the Fourth of July, but the cobbler's shop was open for hospitality if not for business.

"Kind of quiet round, compared with last night," remarked Joseph Bates, with a yawn. "I don't believe I got an hour's sleep. I was just turning and tossing, and wishing those youngsters were at the north pole with their racket."

"When I'm kept awake that way," said Silas Wells, who aspired to be a philosopher but was better known as the laziest man in town, "I'm apt to pass away the time pondering on some subject. Last night my mind got to running on the conservation of energy. Supposing all the energy that those boys expended in raising Cain could be gathered up and devoted to some useful purpose, just how many hoss power would it represent? I don't suppose we can ever find out."

"I dare say not," said Tobias Porter. "I don't know any surer way of wasting a man's energy than trying to make boys really useful. As long as a boy thinks he is having fun, he is the most tireless thing on earth. But let him get a suspicion that what he is doing is of the slightest value to anyone, and he loses all vim."

"That puts me in mind of something that happened when I was a boy, over in Edgemoor," said Amos Gray. "There was quite a little pond at the foot of a field that sloped down from the road, on the Gabriel Mansir place, with some white perch in it. One day Gabriel, who was a cross-grained, tight-fisted sort of man, painted up a sign in great big letters, 'No Fishing Here,' and stuck it up on a bit of an island out in the pond."

"You could see the words plain enough from the road; and that night when a parcel of us boys, twenty-five or thirty in all, were going home from school, Tom Curtis jumped over into the field where Gabriel had had potatoes that year, and picked up a stone and let drive, although he didn't come within a hundred feet of the sign."

"Well, a pack of boys is like a flock of sheep—if the leader jumps a fence they all follow; and in less than a jiffy every one of us was over in the field, and the stones were pelting down on the pond like a hailstorm. We kept at it till almost dark, working like mad, with the sweat rolling down our faces; but we didn't often hit the sign. At last, one piece did get knocked off, so it left the sign reading 'Fishing Here'; and just then Gabriel appeared and we scattered."

"Master Duncan was keeping our school, and he was one of the old-fashioned kind. Gabriel spoke to him about what we had done, and he took the matter up in school next day. He promised us a good whipping; but, first off, he marched the whole lot of us down to Gabriel's to apologize."

"Come to get there, we found Gabriel considerably calmer than we expected. He said he was willing to make some allowance for us, owing to our having helped him out on a kind of backache job that he had been dreading to tackle."

"You see, that field of his was just covered over

with stones that he was intending to pick up and put in piles before laying the land down to grass; and we boys had thrown the bulk of them into the pond, and so got rid of them for good. That saved Gabriel a couple of days' work, at least, and I guess it came as near conservation of energy as you'd often get, in the case of boys."

"But what followed," Amos continued, "illustrates that peculiarity of boys that Tobias was speaking of. Gabriel estimated that we had about two thirds cleared the field of stones. 'Now,' says he, 'if you'll all come here next Saturday and finish the job under my direction, I'll get the master to let you off from your trouncing.'"

"At that we all looked at Tom Curtis. After kind of studying on it a minute, Tom shook his head; and then the rest of us shook our heads."

"The upshot of it was that we marched back to the schoolhouse, and each took a good licking rather than pick up stones in the way of work."

A NEGLECTED PATRIOT

HISTORY has given ample credit to Robert Morris for maintaining and restoring the crippled public credit of this nation toward the close of the Revolution, but it has neglected and almost forgotten a man whose services in the same cause were quite as great and whose sacrifices were far greater: Haym Salomon, the Jewish banker of Philadelphia.

Salomon, says Puck, was born in Prussian Poland in 1742. He came of well-to-do parents, had traveled widely and spoke five languages. An ardent lover of political liberty, he left a land where he saw little of it and came to New York, where he married, raised a family and became prosperous.

When the Revolution began he was in full sympathy with the patriot cause, and for his activity in its support he was put into prison by the British authorities. Released and put at work in the commissary department, he was detected in helping American prisoners to escape and in spreading disaffection among the Hessian auxiliaries.

He was sentenced to death, but managed to escape (probably with the connivance of his jailer), fled to Philadelphia and began business there afresh. His financial acumen and his earnest patriotism caused Robert Morris to turn to him when, in 1781, the credit of the colonies sunk to its lowest ebb; when soldiers and Congressmen were alike unpaid; when commerce was paralyzed and business at a standstill and the struggle for independence was likely to be abandoned for sheer lack of means to carry it on.

Salomon began by negotiating loans from the French government and from certain merchants of Holland. That was a timely service, but it did not meet all the necessities of the case. More money was needed, and after all other sources had been exhausted Salomon put his own large fortune at the service of Morris. In different amounts and at different times he advanced to the colonial government a total of \$658,007, most of it on wholly unsecured notes of hand.

That sum was sufficient to carry the government over the most critical period of the war. But it was not the only sacrifice that Salomon made. Out of his own pocket he paid the salaries of several members of the Continental Congress, among them Madison and Randolph. He generously advanced money to the French and Spanish ministers to this country when their supplies of money were cut off, and acted without compensation as fiscal agent to France and paymaster of the French forces in this country. Without Salomon's unselfish assistance, Robert Morris could never have accomplished the financial task for which he is famous.

Worn-out with work and anxiety, Salomon died in 1785, not yet forty-three years old. No doubt some, although not all, of the private loans he made were repaid, but little of the \$650,000 he advanced to the government in its hour of need was ever repaid either to him or to his heirs. For some years his family tried to get satisfaction of the account from Congress, but, although there was never any disposition to deny the value of Salomon's services and the validity of his claims, our lawmakers never could be got to repay the money that the nation owes. Not even the obligation of gratitude under which the United States rests has ever been even partially discharged. Haym Salomon's name is not even known to posterity; he is forgotten when many a politician who did far less for the cause of liberty is remembered and praised.

RADICAL REPAIRS

THE Boggs River and Northern Railroad, says Judge, was putting into effect a most rigid regime of economy. Locomotives were patched and repaired with old parts and pieces until O'Leary, the shop foreman, threatened to break down under the strain.

To cap the climax, one day a worn-out looking locomotive was sent to the shops, and O'Leary was told to give it a thorough examination and to report what would be required to put it in first-class running shape. That same afternoon O'Leary, having completed his inspection, dispatched the following note to headquarters:

"No. 36—in to-day. To put in complete repair: jack up her whistle and build a new engine underneath."

DISCOURAGING APPRECIATION

THE mayor of the town had been asked, says the Yorkshire Post, to assist in the annual entertainment given at Christmas to the inmates of the parish workhouse. He consented with great complaisance, and went made up as Father Christmas. For a time his antics and pranks were the delight of the company.

A scrap of conversation he chanced to hear, however, put a damper on his enjoyment.

"Ain't he enjoyin' of hisself?" remarked one old man to another. "Wot a treat it is for the likes of he! But why can't they let all the loonies out on a night like this?"

"Well," replied the other, "mebbe they ain't all so harmless as this'n'!"

CHILDREN'S PAGE

THEIR BEST FOURTH OF JULY

BY CAROLYN SHERWIN BAILEY

THE entire Bliss family were looking forward to the Fourth of July with a great deal of pleasure; Mr. Bliss because he was going to have a holiday and Mrs. Bliss because Susan-from-down-the-lane was coming in to get the dinner. Bobby Bliss was looking forward to the Fourth because he had twenty-five cents to spend for something with which to shoot, and Betty Bliss because she had twenty-five cents to spend for something with which to make a noise.

After supper on July 3 the Bliss family sat on the front piazza and talked it over.

"Nothing to do to-morrow!" chuckled Mr. Bliss.

"No dinner for me to cook!" laughed Mrs. Bliss.

"A great big gun!" smiled Bobby Bliss.

"All the noise I want!" shouted Betty Bliss.

"Hurrah!" said the entire Bliss family; but just then little lame Peter hobbled by on his crutches. Everyone knew about little lame Peter. His leg had been hurt in celebrating the Fourth of July the year before.

In the morning the sky was very blue, and the day lilies were very white, and the roses were very red because it was the Fourth of July. The entire Bliss family were up with the robins because each one had a plan for the day. Mr. and Mrs. Bliss knew exactly what they were *not* going to do, and Bobby and Betty Bliss knew exactly what they *were* going to do.

So Bobby took his twenty-five-cent piece and Betty took her twenty-five-cent piece and they started for the store to spend them. Father sat on the piazza and read a book, and mother sat on the piazza and rocked.

On their way to the store Bobby and Betty met little lame Peter. He was limping along quite fast on his crutches, and he had a small American flag pinned to his old coat.

"Good morning, Peter!" said Bobby and Betty.

"Good morning, Bobby and Betty!" said little lame Peter, all smiles.

"Peter will never walk straight again," said Bobby.

"I know it," said Betty. "What are you going to buy at the store, Bobby, a gun or a cannon?"

"I haven't decided," said Bobby.

As they sat on the piazza, Mr. and Mrs. Bliss saw little lame Peter coming on his crutches.

"Where are you going, little Peter?" they asked.

"Nowhere," said little lame Peter. "I'm just taking a walk."

"Then come in and see us for a while," said Mrs. Bliss.

"Yes, come in, Peter," said Mr. Bliss. "The parade will pass by soon, and I will hold you up so that you can see the soldiers."

When Bobby and Betty came home from the store they were very much surprised to see little lame Peter sitting on the piazza between their father and their mother. They were glad, too, because they had wanted to find him again.

"Here, Peter," said Bobby, and he gave little lame Peter a larger American flag. He had bought it with his twenty-five cents.

"And here, Peter," said Betty, as she gave him a red-white-and-blue soldier cap. She had bought it with her twenty-five cents.

Then the parade went by, and they all watched it together, little lame Peter sitting on Mr. Bliss's shoulder, waving his new flag and wearing his new cap. When the bands and the soldiers had passed, Mrs. Bliss disappeared, but before she went she said:

"You are going to stay for dinner, Peter. Bobby will go and tell your mother."

So little lame Peter stayed for dinner at the Blissess' and sat at the head of the table. It was a surprise dinner. Mother had helped Susan-from-down-the-lane, and had made a huge firecracker for dessert. It was larger than the largest cannon cracker. It was made of raspberry sherbet, and was very, very good.

After dinner Mr. Bliss put up a new swing in the apple tree and made a tent on the front lawn for Bobby and Betty and little lame Peter. Mrs. Bliss made pink lemonade and served it to them with pink-and-white peppermint drops and cookies and the blue Japanese napkins in the tent. Then they all played games, and Mr. Bliss went down to the store and bought sheets and sheets of paper soldiers, and mother helped the children cut them out.

DRAWN BY L. J. BRIDGMAN

First, Mother Bear discoursed a while

About the changes in the style
Of summer furs: "O deary me,
What very curious things we see!"
Then Buster Bear told how a whale
Had hit him with a swishing tail
When he was learning how to swim,
And wholly knocked the breath
from him.

And thus they went from this to that,
The way all bear folk love to chat.

Then Father Bear got in a word;
And when he spoke, the others heard.
"Oh, look!" he growled. "What
can that be

Far down across the southern sea?"
They looked and saw a wondrous
sight—

A flood of streaming, blazing light
That spread so far and shot so high
It wholly filled the southern sky.
The colors were of varied hue,
But mainly red and white and blue.

There were a thousand twinkling
stars,
All brighter than the planet Mars;
There, too, a thousand stripes of red
That rippled to the sky o'erhead.
The flashing light showed stranger
things—

As eagles with outstretching wings,
And now and then a human face
That was not of the Arctic race.
Small wonder that the bear folk sat
In awe before a sight like that!

Then Father Bear spoke out: "My
dears,

I've seen it all in other years.
It comes along in each July.
But not before so bright or high.
Aurora borealis lights
Are often wondrous in our nights,
But they are nothing to compare
With what we see so plainly there.
I think we'd better take a floe
And to that southern region go!"

THE DOCTOR'S LITTLE PASSENGER

BY DAISY D. STEPHENSON

FAR up a rocky cañon, to a brown log cabin, Ruth goes every summer with her mother and her grandmother. Her father, a physician in the city, drives up for week-ends. Then Ruth hops about the great rocks that rim the noisy stream, and watches her father, happy with "waders" and fishing rod. There are always delicious brown trout and flaky biscuits for supper on Saturdays.

Ruth has a very odd birthday. Her father says she should properly have been named Independence, Liberty or Firecracker—for she was born on the Fourth of July.

Last year she was so excited that she thought she could not wait to see what her birthday surprise would be. Grandmother and mother had laughed and hinted about it, and Ruth was bursting with curiosity and impatience until at last she said, "If I wait another day, I shall go whizzing round like a pin wheel!"

"There comes an automobile now!" called her mother, who was up on a stepladder, putting some little flags round the rustic porch.

"Oh, maybe it's father!" And Ruth scurried down the rocky path and across the tiny bridge to the cañon road. It was not her father that time; so Ruth began sailing pine-cone boats while she waited and listened.

"Toot-toot-ti-toot!" That was father's signal, and there he was, coming round the shoulder of a cliff. And in the tonneau of the big car was the smallest, funniest brown pony that Ruth or anyone else ever saw.

Well, Ruth was as excited and full of thrills and gurgles and dimples after that as every Fourth of July child should be.

"It was too much of a climb for little Tom Thumb," explained the doctor, "and there was no train near enough—no airship, so I just decided to carry him as a passenger. He is no larger than a St. Bernard dog anyway, and there was plenty of room for everyone. The little rascal enjoyed every minute of his ride, too."

Ruth was patting and stroking the gentle creature, who stood quietly, as if he had understood that he was among home folks now.

"So we'll all have a safe-and-sane Fourth," declared the doctor. "Ruth may ride, I'll fish, and mother and granny will fix us a picnic up on the hill."

"That will be glorious!" agreed Ruth's mother. Then to the little girl, who had climbed upon the pony's back, she said, "What shall you name him, dear?"

Ruth thought for a second; then with a rippling laugh she cried, "Why, Skyrocket, of course!" And away she flew on Skyrocket to the stable up among the quaking aspens.

THE FOURTH IN THE ARCTIC

BY OSWALD M. RICKARD

They sat upon a drifting floe
Where Arctic currents come and go.
The White Bear and his family,
All looking southward o'er the sea.
It was a perfect summer night;
Contentment filled the bear folk,
quite.

For they had had a sumptuous meal.—
The last course was a luscious seal.—
And so in cool repose they sat
And talked a bit of this and that.

Before they knew it, hardly, it was time for the fireworks, and they took little lame Peter, and stopped on their way to the Green to take Peter's mother, too.

"It has been the very best Fourth of July we ever had," the entire Bliss family said at bedtime.

"And how I have worked!" said Mr. Bliss.

"How I have worked!" said Mrs. Bliss.

"I didn't shoot once!" said Bobby Bliss.

"And I didn't make a bit of noise!" said Betty Bliss.

Then the entire Bliss family laughed and laughed at their Fourth of July joke.

THE WILLFUL TORPEDO

BY MELVILLE CHATER

'T WAS a little Torpedo, round and red,
So proud of his small, young self
That he jumped clean out of his sawdust bed
And danced on the shopman's shelf.

"What a noise I'll make on the Fourth!" laughed he.
"Oh, the whole wide world it shall hear from me!"

The rockets whistled, the pin wheels hissed
As they frowned on this bold, young chap.
"Till the Fourth rolls round," said they, "desist
Lest you meet with a sad mishap.
Oh, we, your elders, have often heard
That pride will fall—and it's July Third!"

But that little Torpedo skipped with mirth.
Quoth he, "You may all go hang!"
Then he stubbed his toe and he fell to earth,
And he burst with an awful bang;
And the fuses caught at the sparks he woke,
And the fireworks all went up in smoke.

Oh, the bombs went off, and the candles whizzed,
And the crackers burst their cage;
The punk sticks glowered, the set piece sized,
The balloons swelled up with rage;
And children cried as they watched the flame,
"What a terrible, awful, downright shame!"

Yes, he made a noise in the world, no doubt,
On that night of July Three,
But naught was left when the flames went out—
And all was the fault, you see,
Of that little Torpedo, round and red,
Who would not heed what his elders said.

A JULY JINGLE

BY N. O. PRICE

ONE TO MAKE READY,
TWO TO BE QUICK;
UP GOES THE ROCKET,
AND DOWN COMES A STICK!

Ho! For the Open Road!

What is more delightful than spinning along cool, shady country roads away from the heat and grime and dust of the hot city?

Especially if your bike is equipped with **good tires**—tires as soft as cushions and as tough as a rubber ball—tires that defy the road—**United States Bicycle Tires**—all twelve and one, at least, to meet all your needs.

Have you written for the Pin yet? Fill in the coupon below, **now**. It costs nothing.

STEWART SIGNAL SET

Every Naval Reserve and Signal Man, Yachtsman and Boy Scout should have one. Send for particulars and our free card showing simplified method for memorizing Morse Code.

PRICE \$3.50
Cheaper set \$3.75

STEWART MFG. CO., 68 Devonshire St., BOSTON, MASS.

Bicycle Book FREE

A book to delight boys' and girls' hearts. Have money! Offers guaranteed bicycles—\$10.00 and up. Write **Montgomery Ward & Co.** Dept. G812 nearest house. New York, Chicago, Kansas City, Ft. Worth, Portland, Ore.

You May Try The New Companion

Three Months
Before Deciding

EVERY New Companion Sewing Machine is sold subject to purchaser's approval after a three months' trial. If not satisfactory we will refund your money and take back the machine at our expense.

MANY NEW IMPROVEMENTS. The New Companion is the only machine in the world with the wonderful new Automatic Plate-Tension Release. We have also added a new Shuttle Ejector, Ball Bearing Steel Pitman, Spring Head Latch and a beautiful new quartered-oak woodwork with solid side drawer casings. These are all in addition to the regular features of this high-grade family sewing machine. No machine at any price will do better work or last longer.

NO FREIGHT TO PAY. We pay all charges to your nearest freight station anywhere in the United States. We also guarantee safe delivery and warrant each machine 25 years.

OUR LOW PRICES will surprise you. Our factory-to-home system of direct dealing will save you a large amount on the purchase of a first quality machine.

WE WILL TELL YOU how we do it if you will write for our free Illustrated Booklet to-day. A postal-card request will bring it by return mail. Send at once—war conditions may force prices up.

PERRY MASON COMPANY

Ingersoll Radiolite Watches

HERE are watches that tell the time by day and by night. Their radium-lighted hands and figures glow brightly in the dark—they stand out white against the black dial in daylight.

At night they can be photographed through black paper. This proves there's real radium in them.

There are six models of Ingersoll Radiolite Utility watches—for the pocket, desk, boudoir and wrist.

Look at the model you like best at any Ingersoll dealer's store today.

THE FIRST AMERICAN PERISCOPE

THE Navy Department has recently received a description of the first periscope used in the United States Navy, as given by its designer and left among his papers. According to the Washington Star, the inventor was Thomas H. Doughty, acting chief engineer, who served under Lieut. Com. Selfridge on the monitor Osage during the Civil War.

In the Red River campaign against Shreveport, Louisiana, in which the Osage took part, Confederate cavalry continually harassed the Union ships by sudden attacks along the banks of the river. Unlike modern ships, the monitors of those days were not provided with places of observation; they were virtually steel boxes with slits in them for aiming the guns. In seeking a method of watching the shores, Doughty took a piece of ordinary lead pipe and, fitting it with mirrors at each end, ran it through a hole in the turret. The scheme proved successful, and thereafter the Osage was virtually free from attack.

When the army sent to take the city met with reverses and fell back, the fleet, which had made its way to within thirty miles of Shreveport, returned down the Red River. Selfridge, in the Osage, was ordered to protect the rear. The river at the time was low, and the Osage, in turning a bend in the river, ran hard aground.

While an effort was being made to float the vessel a force of three thousand dismounted Confederate cavalry attacked it. The low water and the high river bank prevented the ship's fire from reaching the cavalry, and it was here that Engineer Doughty's periscope came into use. The Confederates could not be seen until the head of their advancing columns appeared over the river bank. A fierce fire swept the deck of the monitor, as the regiments of the enemy, coming up in columns, would each fire one volley and then fall back.

Standing behind the turret, Selfridge saw in the reflector of the periscope the advancing line as it appeared over the bank. He reserved his fire until their heads came into sight and then let drive. This singular fight was kept up for over an hour before the Confederates retired with a loss of some four hundred men killed and wounded. The loss on the Osage was small.

Thomas Doughty enlisted in the United States Navy in 1862. He was assigned to duty as an assistant engineer on July 8, 1862, and promoted to acting chief engineer December 13, 1862. He died in St. Louis in 1896.

AMERICAN RECRUITS

WHEN Great Britain issued its first call to arms, Canada promised twenty thousand men as a first contingent. A contributor to Every Week says that for their preliminary training they had guns and bayonets but no uniforms. The uniforms were handed out to them in packages as they boarded the train for the seacoast. There were only twenty thousand uniforms, and only men in uniform were to be taken on the ships. When the trains finished their journey and the contingent drew up to be embarked, officers counted the men, and found to their surprise that there were thirty-three thousand men instead of twenty thousand.

They were all in uniform, as ordered; at least, each man was in part of a uniform. One had on the trousers, another the coat, another the shoes, another the belt of a uniform. Each man, when questioned, swore solemnly that he had been entitled to a uniform, and had been one of the chosen twenty thousand, but in the hurry of entraining he had lost all of his uniform except the part he wore. And because no one of them would admit that he had boarded the train against orders, and because the ships were waiting and there was no time to be lost, the officers embarked the whole crowd for England, leaving the tangle to be straightened out on the other side.

There they took the histories of the whole thirty-three thousand; and when the English War Office came to examine the answers to the question, "Who is your next of kin?" they found that of the thirty-three thousand more than nine thousand were not Canadians at all, but American citizens. In the predicament word went out that no Americans could enlist; they must all go home. Like lightning, the news spread through the camp. The next day the contingent was to be paraded and all Americans must be mustered out.

When the parade took place a miracle had happened. The preceding day there had been more than nine thousand Americans. To-day, when the show-down came, there was not one. Every American had become a Canadian overnight!

THE POUND OF FLESH

ALTHOUGH the attempts of alien students to thread the labyrinths of English are sometimes adventures indeed, says a writer in the World Outlook, nevertheless it is the mistakes of the Americans who attempt to express themselves prematurely in other languages that most amuse us.

The Spanish word for sons is *hijos*, and for figs, *higos*. One can, therefore, readily understand how the following conversation might have easily taken place. A lady went into a grocery store in Porto Rico to buy figs. The conversation translated into English was as follows:

"Have you any sons?"
"Yes," replied the storekeeper, pleasantly.
"White ones?"
"Yes!"
"Very well; I will take one pound, if you please."

To that the storekeeper replied that his sons were not for sale, and certainly not by the pound.

A VALUABLE MANUSCRIPT

THE highest price that was ever paid by any magazine for a serial, according to Miss Jeannette Gilder, writing in the New York Sun, was given by the Century Magazine to Messrs. Nicolay and Hay for their Life of Lincoln. She says:

Roswell Smith, the president of the Century Company, first offered them twenty-five thousand dollars. Hay and Nicolay looked at each other "in wild surmise." Mr. Smith took the exchange of glances to mean dissatisfaction. He left the room, walked up and down outside tearing bits of paper to fragments, then came back and offered them fifty thousand dollars.

That offer they at once accepted.

NATURE & SCIENCE

OUR ORE CARRIERS.—The loading and the unloading of the big ore boats of the Great Lakes are accomplished with remarkable speed. According to The Story of Steel, an ore boat was loaded at Duluth in September, 1915, with 11,282 tons of ore in one hour. At one of the Lake Erie ports, the great Hulett unloaders, which grab fifteen tons at a bite, took out a cargo of 11,083 tons in three hours and forty minutes. The ore docks, which are at Duluth and Two Harbors, are complex affairs of three levels. First, the dock proper extends hundreds of feet into the lake; upon the dock, beside a basin wide enough to admit the great ore steamers, is a structure of heavy timbers, whose upper sections form pockets for the ore; and on the very top are lines of railway tracks. The loaded trains from the mines are run out on the tracks over the pockets, and the ore is dumped automatically. Then the empty cars are switched over to the return track and started back to the mines. One of the great fleet of ore boats comes up from the lower lake port, slips into the basin and is made fast to the dock. The ship, six hundred feet long and only sixty feet wide, is a steel shell with houses at each end—officers' quarters and bridge in the bow, crew's quarters and engine room in the stern. There are hatches six feet apart all down the long, open deck between the houses. As soon as the ship is made fast the hatches are opened and from the ore pockets above are let down chutes that are folded flat against the pockets when not in use. The doors of the ore pockets are opened; two laborers with crowbars stand by to start the ore, which goes rushing down the chutes so fast that in twenty minutes a ten-thousand-ton ship is loaded. A few minutes later, under its own steam, the vessel puts out into the lake and joins the endless procession of boats that carry ore throughout the open months.

OUR CURVES OF LIFE.—The accompanying chart shows some of the interesting facts brought out by the life tables prepared for the Bureau of the Census by Prof. James W. Glover of the University of Michigan. The chart shows the number of persons alive at each age out of 100,000 born (alive) in what are known as the original registration states. It is as if 100,000 persons were kept under observation from the time of birth, and each year a count were made of the

number still alive. The figures are given for white males and white females both in the rural and in the urban populations, and for colored males and females in the total population. The original registration states are Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Indiana, Michigan and the District of Columbia. The life tables are based upon the population as of July 1, 1910, and on the deaths registered in the years 1900, 1910 and 1911. In the chart the city or urban population is virtually that of cities of 10,000 population and over; the rural population is that of cities and towns of less than 10,000 population, together with that outside cities and incorporated places. The graphic representation of the essential facts by means of the chart makes it possible to see readily the comparative significance of the figures for the several population groups. The facts brought out by the chart are that for each group of the population the females are longer lived than the males, and that of the several groups the country dwellers live longer than the city population, and the white race lives longer than the colored race.

WASTE NOT, WANT NOT.—A single slice of bread seems an unimportant thing. In many households one or more slices are thrown away every day. Sometimes quarter- or half loaves find their way into the garbage pail, yet one good-sized slice of bread weighs an ounce and contains almost three quarters of an ounce of flour. The Department of Agriculture estimates that, if every one of the 20,000,000 homes in the country wastes, on an average, only one slice of bread a day, the country is throwing away daily over 14,000,000 ounces of flour—more than 875,000 pounds, or enough for more than a million one-pound loaves a day. In a full year at that rate there would be a waste of more than 319,000,000 pounds of flour, or more than 1,500,000 barrels—enough to make at least 400,000,000 loaves. Since it takes 4½ bushels of wheat to make a barrel of ordinary flour, the waste represents the flour from about 7,000,000 bushels of wheat. The average crop of wheat is not quite 15 bushels to the acre. It would, therefore, take the crop of some 470,000 acres to provide a single slice of bread a day for every family to waste. An army of farmers, mill men and flour-mill employees must work to produce that quantity of flour, and many freight cars and thousands of tons of coal are required to get it to the consumer. When there are so many ways to make use of stale bread it is inexcusable to waste it.

THE COMING AUTOMOBILE.—According to Dr. Raymond F. Bacon, director of the Mellon Institute of Industrial Research, the motor car would not be what it is today except for the advances made in the last two decades by chemists in giving the industry various useful steel alloys and steel that is specially treated, together with certain other alloys, the use of which has made it possible to build cars that are both light and strong. "I am convinced," says Dr. Bacon, "that such tremendous improvements will be made along these general lines in the next few years that the car of the future will be entirely different in its materials of construction. Probably new alloys of aluminum of sufficient cheapness will be developed or many parts of the car, and new types of steel of strength tests away beyond those now in use will follow; so that, while the future car will be stronger and will stand up better than the car of today, it will be very much lighter in weight and can be built more cheaply than the cars of the present day."

Get in on this contest—

Earn a Winchester "Sharpshooter" Medal

There's just one thing you could show the fellows with more pride than a beautiful, shiny, brand-new Winchester rifle—and that's a *Silver Winchester "Marksman" Medal*, or a bright *Gold "Sharpshooter" Medal*.

Look at the medal on this page. Wouldn't you like to own one like it?

How to try for a "Sharpshooter" Medal

We are offering *Gold "Sharpshooter" Medals* and *Silver "Marksman" Medals* for skill with a Winchester .22 caliber rifle.

Any boy or girl under sixteen may compete for these medals.

The *Gold "Sharpshooter" Medal* goes to the boy or girl under sixteen who makes the first grade score.

The *Silver "Marksman" Medal* goes to the boy or girl who makes the second grade score.

No limit is set to the number of trials you may make for these medals; you may shoot as many practice targets as you want to.

Your dealer will tell you all about the details of this contest. Go to him today. But first, go to your dad, tell him about this contest, and get him to let you have a Winchester so you can get in on the Winchester prizes.

Get dad on your side

Tell him what a gun will do for you. Tell him it will teach you responsibility, self-control, self-reliance, and make you a good citizen of the future.

Tell him that sooner or later your natural interest in a gun is going to make you get your hands on one, so the sooner you learn the correct use of a gun, the better. Remember, it's just as important for you to know how to handle a gun safely as it is for you to know how to swim. This contest

will teach you how to handle a gun correctly from the start.

There is a place near you, either in the open or at a club, where you can shoot. If you do not know where to shoot, write us and we will tell you where and how you can, or we will help you organize a club.

Get your dad to go down to your dealer with you and look over the Winchester guns. You'll be surprised what a good gun you can get for the money.

What the name "Winchester" means

The Winchester Company is the greatest organization of small arms experts in the world. It makes a gun that cannot be duplicated by any other manufacturer.

No Winchester barrel varies one one-thousandth of an inch from a straight line, or one one-thousandth of an inch in thickness or diameter. Winchester craftsmanship is based on fine watch-makers' standards.

Every gun or rifle that bears the name "Winchester" is fired over 50 times with excess loads for strength, smooth action and accuracy.

All Winchester barrels are finished by the Bennett Process, which gives the barrel a finish that lasts a lifetime; hard to scratch and resists rust. All the color and gloss is in the metal itself—there is no artificial coating used.

This care in manufacturing explains why Winchester rifles are used by experts everywhere.

Go to your dealer and look over the new stock of Winchester rifles. Get started on the Winchester Prize Contest today. Ask the dealer for the catalog and the booklet on the proper use of a gun. If he cannot supply you, write direct to us.

THE YOUTH'S COMPANION is an illustrated weekly paper for all the family. Its subscription price is \$2.00 a year, in advance, including postage prepaid to any address in the United States, \$2.25 to Canada, and \$3.00 to foreign countries. Entered at the Post Office, Boston, Mass., as second-class matter.

New Subscriptions may begin at any time during the year.

Money for Renewals should be sent by subscribers directly to this office. We do not request Agents to collect money for renewals. Payment to strangers is made at the risk of the subscriber.

Payment for The Companion, when sent by mail, should be by Post Office Money Order or Express Money Order. When neither of these can be procured, send the money in a Registered Letter.

Silver sent through the mail is at the sender's risk. It is liable to be stolen or to wear a hole through the envelope.

Renewals. Three weeks after the receipt of money by us, the date after the address on your paper, which shows when the subscription expires, will be changed.

Always give the name of the Post Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and orders made payable to

PERRY MASON COMPANY,
The Youth's Companion,
Commonwealth Ave. and St. Paul St., Boston, Mass.

UNSAFE ICE

PEOPLE all over the civilized world use ice—either natural or artificial—to make food more palatable and to preserve it in hot weather. In the days when we depended upon natural ice alone, the ice crop sometimes failed; warm winters occasionally came when it was impossible to get enough good ice to supply the demand. Then, also, as people found that ice was one of the real needs of life, they began to want it in tropical and semi-tropical places to which it could not easily be transported. About 1850 a man named Carré invented an ice machine, and about the same time another process was patented by Dr. Gorrie, to whom the people of Florida have erected a monument. That was the beginning, and in the late eighties the making of artificial ice became a commercial success.

Ice is always the same thing, whether natural or artificial. It is the result of the abstraction of heat from water. As we all use it, the question of its safety—that is, its cleanness—is of universal importance.

Ice is no cleaner than the water from which it is made, and that, unfortunately, may be very dirty. That is true of both natural and artificial ice. The natural ice may come from contaminated streams, and artificial ice, which was formerly made only from distilled water, is now often made from water that is filtered but not distilled. Furthermore, workmen may pollute ice by handling it or by walking over the tanks in soiled boots. It is fair to say that the owners of many ice factories are careful to make their employees wear clean clothes and clean shoes. But after the ice has left the factory or the ice house for distribution it may still be contaminated by being dragged over dirty pavements or by being handled with soiled hands.

Freezing does not kill disease germs. A number of experiments made lately in the Massachusetts Institute of Technology and elsewhere establish the fact that low temperatures merely keep bacteria in a dormant state, from which they awake as active as ever when brought into heat. Frozen foods, such as ice cream and milk and egg mixtures, are often the lurking places of germs. Typhoid germs sometimes live for months in frozen delicacies. The safest way of cooling drinking water is to place it in a bottle or jar in the refrigerator—not to put the ice directly into the water.

MUMPS AND CONDOLENCES

MUMPS! Phyllis echoed the word with mingled incredulity and consternation. "But I can't have them!" she cried. "I can't! Why, I'm going to be married to-morrow! Everything's all ready!" Her voice indicated the utter preposterousness of it all.

The new doctor—he was taking the place of the family physician who was away upon an almost unheard-of vacation—was courtesy itself. He told her regretfully that mumps were no respecters of weddings, but promised her, from all appearances, only a brief imprisonment; of course he could not be certain; but so far there was no swelling on the right side. But that it was mumps on the left side, and that it was bound to run its course, he left her no doubt whatever.

After he had gone Phyllis buried her face—right cheek down—in the pillow and sobbed. She was interrupted by her younger sister, Ethel, who was immune and thrilling with excitement. She had been telephoning to the Underwoods, and they all sent messages, and there was a great box of flowers, and Richard was insisting upon seeing her.

"Indeed he shall not!" Phyllis interrupted sharply. "It's bad enough to have the bride ridiculous. I won't have the groom a laughingstock, too."

Ethel drew a long breath; her eyes shone with excitement. "Oh, isn't it just awful!" she whispered sepulchral.

A week later Phyllis, with the "mump," as she accurately defined it, vanquished, was giving Cousin Katherine a vivid account of the experience.

"Cousin Katherine, I had the most wonderful collection of condolences you ever heard of. They taught me a great deal. You see, I had plenty of time to think them all over, not seeing Richard for five whole days!"

"Tell me," said Cousin Katherine.

"Well, there was Alicia. She wept over me by telephone and made floral offerings till I felt like a sheet of wet blotting paper. 'You poor dear, how are you feeling, really?' Isn't it the most awful thing you ever heard of?" and so forth, and so forth.

"Kit Frane was a good antidote. She took it all as a huge joke—which made me mad, for it wasn't precisely a joke even if it wasn't a world-shaking calamity. Then Helen Hunter kept telling me how much worse it all might have been. Of course it might, but it didn't do much good to keep telling me so. And Olive gave me a complete account of Lillian Peters's wedding, where everything went so perfectly."

"And Mary Hosmer?" Cousin Katherine asked.

Phyllis met her smile with another. "You do see through us all, don't you, Cousin Katherine? Yes,

Mary was the one. She was dear and sympathetic, but before I knew what had happened she had taken me by the hand and led me right out of my selfish self into the big world outside. She didn't preach, but she had me so interested that I forgot all about mumps—the world was so big! Mary always does that."

There was silence; then Phyllis said softly: "Yes, I learned a heap of things."

TAD AND HIS FATHER

MR. Lincoln and his son Tad were almost inseparable. Even when Gen. Grant came to Washington and had conferences with the commander in chief, Tad stood gravely by. One day, a little before Christmas, writes Mr. F. Lauriston Bullard, Tad interrupted a Cabinet meeting to obtain a reprieve from execution for a turkey to which he had taken a fancy. Several times he brought cases of distress to the attention of the President. He would go about the hall asking callers what they wanted, and he sometimes took petitioners by the hand and dragged them forth into his father's presence.

Almost every day Lincoln would have at least one romp with the boy. The game at times was blindman's buff; again the tall man would run through the rooms and the hall above stairs with Tad mounted on his shoulders; and often they played horse, with each alternating as the driver. When the work of the day was nearly over and the President had a brief respite before he began the toll of the night, he would call the boy. They looked through books of engravings together, and Lincoln sharpened pencils for Tad and helped him to keep track of his playthings. Frequently the boy fell asleep in the office, and then Lincoln would carry him tenderly across the hall to bed.

One day in summer the President and Gen. Eaton were in conference at the White House, and Tad, by poking pins into a chart at his own freakish pleasure, was making such a war map as no strategist would ever have dreamed of. The wind was blowing from the Virginia side of the Potomac, and it brought through the windows the sound of a musketry volley. Lincoln rose and walked across the room and stood gazing at the Virginia hills with his arm about Tad's shoulders. As he came back to his chair there were tears streaming down his cheeks.

"This is the day when they shoot deserters," he said, "and I am wondering whether I have used the pardoning power enough. Some of the officers say that I am using it so freely that I am demoralizing the army and destroying its discipline." And then, as Tad came to his knee, the President added: "But Tad here tells me I'm doing right, and Tad's advice usually is pretty good."

RIVAL PACK PONIES

THE strongest pack pony always tries to keep in front of another animal on the trail, where the driver's whip cannot reach him. In that comfortable position he can stop long enough to browse on a willow bush or tear up a tall plant of vetch in purple blossom, writes Mr. A. P. Coleman in The Canadian Rockies. Any punishment will descend on the flanks of his rear guard.

Our lively sorrel pack pony always practiced this exasperating strategy until the driver lost his temper and plunged forward through the brushwood to give him some mighty blows; but before the deserved punishment arrived, Sorrel was trotting unconcernedly ahead as if he had never broken the law.

The rivalries of the ponies in the earlier part of the journey were of some practical importance, for until the vital questions of precedence were settled there could be no order in the procession. For days there were struggles for the lead, bitings, squealings, crowdings and jostlings that the driver had to take cognizance of in order to keep the train in motion; often he had to urge his pony into the bush beside them before he could restore order. In one of these squabbles, Jones, an easy-going pack pony, slipped off the narrow side-hill path, rolled over sideways, made a complete rotation, and, turning up on his feet at the bottom of the hill with the pack all in order, trotted on without the least display of emotion.

THE PROPHET WITHOUT HONOR

ALTHOUGH Mr. Thomas Hardy, the famous English novelist, has lived for so long in Dorsetshire, among the very scenes that he has depicted so graphically in his books, he is of such a retiring and modest disposition that his literary fame is unknown to a number of the quiet country folk who live in his vicinity.

An enthusiastic admirer once visited Dorsetshire and approached an old lady whom he found sitting outside her cottage door.

"Mr. Hardy lives near here, doesn't he?" he inquired.

"Which Mr. Hardy?" asked the old woman.

"Why, Mr. Thomas Hardy, who writes books," replied the astonished pilgrim.

"Oh, I know nought about him," said the woman, "but there be a Hardy near by that rears grand pigs!"

COULD NOT MISS IT

THE average foreigner's difficulty in comprehending the huge area of the United States is well illustrated by a story in Everybody's Magazine about an Englishman and his valet who had been traveling due west from Boston for five days. The traveler found his servant gazing thoughtfully out of the window. He said to him:

"William, what are you thinking of?"

"I was just thinking, sir, about the discovery of America," replied the valet. "Columbus didn't do such a wonderful thing, hafter hall, when he found this country, did he, now, sir? Hafter hall's said and done, 'ow could 'e 'elp it?"

SAFE, AT LAST

AMAN who was continually losing his collar button while dressing, says the American Medical Journal, complained to his wife about it. With an ingenuity born of the use of hairpins, she told him to hold his collar button in his mouth. The next morning she was startled by an unusual commotion.

"What's the matter?" she asked anxiously. "I've swallowed the collar button," said the man.

"Well," responded his wife, "there's one comfort: for once in your life you know where it is."

Twenty Million Miles of Telephone Wire

The telephone wire in use in the Bell System is long enough to run from the earth to the moon and back again forty times.

The Bell System has about twice as much telephone wire as all Europe.

More than 500,000 new telephones are being added to the Bell System yearly—almost as many as the total number of telephones in England.

In twelve months the Bell System adds enough telephones

to duplicate the entire telephone systems of France, Italy and Switzerland combined.

In proportion to population the extension of the Bell System in the United States is equal in two years to the total telephone progress of Europe since the telephone was invented—a period of about forty years.

The Bell System fills the telephone needs of the American people with a thoroughness and a spirit of public service which are without parallel the world over.

The American Boy of 1776

THE SPIRIT OF 1776 is still alive in America—that deep-rooted desire for a gun is still found in the heart of every real American Boy. Every boy should have the training and pleasure of shooting true to the mark with the safest gun ever designed for boys—the Daisy Air Rifle.

The Daisy Pump Gun and the Military Daisy are two big favorites. Both are 50-shot repeaters, finished in blued steel, with turned walnut stocks, and sell at \$3.50 each. Other Daisy models 50c. to \$5.00.

At your dealer's or sent direct from factory on receipt of price. Send for descriptive circular.

DAISY MANUFACTURING CO.,
288 Union St., Plymouth, Mich.

DAISY AIR RIFLES

"Here's a Tire Like Dad's"

Look at that "swell" black safety tread with its big rubber bars—just like the famous Goodrich Automobile Tire. It's a "beauty" and it wears longer than any other bike tire you can buy. With

GOODRICH "GIANT" Bicycle Tires

you can spin along the road and thru the streets without any "fussing" with punctures to lay you up when the other fellows are riding.

That's because the "Giant" has *two plies* of extra weight motorcycle tire fabric—not ordinary bicycle tire cloth.

That thick, muscle-like rubber tread wears three times as long as other tires and the big black bars won't let you slip when the roads are wet.

The Goodrich "Giant" is the strongest, finest bicycle tire ever made—built in the World's Largest Rubber Factory.

Tell your Father about it and ride on it yourself this year. Any bicycle store can get "Giants" for you.

FAIRY

FAIRY SOAP affords real refreshment in toilet and bath use. Its rich, creamy lather—its whiteness and lasting purity—are due to the skillful blending of choice materials.

The oval, floating cake fits the hand, and holds its refreshing, cleansing qualities to the last. The cost is but 5c.

THE N. K. FAIRBANK COMPANY

"Have you a little Fairy in your home?"

5¢

"What! My Car?"

"Yes! Skidded—and it's up to you. You failed to provide the chauffeur with Tire Chains. Only good luck saved your wife from paying the supreme penalty for your negligence. She's on the way to the hospital, painfully injured, but the doctor thinks she'll pull through. You'd better hurry to the hospital and then report to Headquarters."

How strange it is that disaster must come to some men before they realize that all makes and types of tires will skid on wet pavements and muddy roads when not equipped with Chains.

These men do not appreciate, until too late, that by failing to provide Weed Anti-Skid Chains

they expose their families to injury and death.

The time to provide against accidents is before they happen. Don't wait until after the first skid. Put Weed Chains on all four tires at the first indication of slippery going and you will have quadruple protection against injury, death, car damage and law suits.

Weed Chains are Sold for All Tires by Dealers Everywhere

AMERICAN CHAIN CO. INC., BRIDGEPORT, CONN.

Sole Manufacturers of Weed Anti-Skid Chains
